## $\dagger$ Not applicable.

NOTE: Full-time-equivalent staff is the full-time staff, plus the full-time equivalent of the parttime staff. Degree-granting institutions grant associate's or higher degrees and participate in
Title IV federal financial aid programs. Data are for all degree-granting institutions, including
those with fewer than 15 employees. Detail may not sum to totals because of rounding.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2016, Human Resources component, Fall Staff section; and Spring 2016, Fall Enrollment component. (This table was prepared December 2016.)

Table 314.60. Ratios of full-time-equivalent (FTE) students to FTE staff and FTE faculty in private degree-granting postsecondary institutions, by level of institution and state or jurisdiction: Fall 2015

| State or jurisdiction | Full-time-equivalent (FTE) staff |  |  |  | FTE faculty |  |  |  | FTE faculty as a percent of FTE staff |  | FTE students per FTE staff |  | FTE students per FTE faculty |  |

## $\dagger$ Not applicable.

NOTE: Full-time-equivalent staff is the full-time staff, plus the full-time equivalent of the parttime staff. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data are for all degree-granting institutions, including those with fewer than 15 employees. Detail may not sum to totals because of rounding.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2016, Human Resources component, Fall Staff section; and Spring 2016, Fall Enrollment component. (This table was prepared December 2016.)

## -Not available.

${ }^{1}$ Estimated on the basis of enrollment. For methodological details on estimates, see National
Center for Education Statistics, Projections of Education Statistics to 2000.
${ }^{2}$ Because of revised survey methods, data are not directly comparable with figures for years prior to 1987.
NOTE: Includes faculty members with the title of professor, associate professor, assistant professor, instructor, lecturer, assisting professor, adjunct professor, or interim professor (or the equivalent). Excluded are graduate students with titles such as graduate or teaching fellow who assist senior faculty. Data through 1995 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes more

2-year colleges and excludes a few higher education institutions that did not grant degrees. Beginning in 2007, includes institutions with fewer than 15 full-time employees; these institutions did not report staff data prior to 2007. Detail may not sum to totals because of rounding. SOURCE: U.S. Department of Education, National Center for Education Statistics, Higher Education General Information Survey (HEGIS), Employees in Institutions of Higher Education, 1970 and 1972, and "Staff Survey" 1976; Projections of Education Statistics to 2000; Integrated Postsecondary Education Data System (IPEDS), "Fall Staff Survey" (IPEDS-S:87-99); IPEDS Winter 2001-02 through Winter 2011-12, Human Resources component, Fall Staff section; IPEDS Spring 2014 and Spring 2016, Human Resources component, Fall Staff section; and U.S. Equal Employment Opportunity Commission, Higher Education Staff Information Survey (EEO-6), 1977, 1981, and 1983. (This table was prepared December 2016.)

${ }^{1}$ Combined total of faculty who were Black, Hispanic, Asian, Pacific Islander, American Indian/Alaska Native, and of Two or more races as a percentage of total faculty, excluding race/ethnicity unknown and nonresident alien.
${ }^{2}$ Race/ethnicity not collected.
${ }^{3}$ Only instructional faculty were classified by academic rank. Primarily research and primarily public service faculty, as well as faculty without ranks, appear under "other faculty." NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Includes institutions with fewer than 15 full-time
employees; these institutions did not report staff data prior to 2007. Race categories exclude persons of Hispanic ethnicity. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Winter 2011-12, Human Resources component, Fall Staff section; and IPEDS Spring 2014 and Spring 2016, Human Resources component, Fall Staff section. (This table was prepared December 2016.)

Table 316.10. Average salary of full-time instructional faculty on 9-month contracts in degree-granting postsecondary institutions, by academic rank, control and level of institution, and sex: Selected years, 1970-71 through 2015-16

${ }^{1}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to an academic-year basis.
NOTE: Data through 1995-96 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data for 1987-88 and later years include imputations for nonrespondent institutions. Some data have been revised from previously published figures.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Higher Education General Information Survey (HEGIS), "Faculty Salaries, Tenure, and Fringe Benefits" surveys, 1970-71 through 1985-86; Integrated Postsecondary Education Data System (IPEDS), "Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty Survey" (IPEDS-SA:87-99); and IPEDS, Winter 2001-02 through Winter 2011-12 and Spring 2013 through Spring 2016, Human Resources component, Salaries section. (This table was prepared December 2016.)

Table 316.20. Average salary of full-time instructional faculty on 9-month contracts in degree-granting postsecondary institutions, by academic rank, sex, and control and level of institution: Selected years, 1999-2000 through 2015-16

$\ddagger$ Reporting standards not met (too few cases).
${ }^{1}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to an academic-year basis.
${ }^{2}$ Institutions that awarded 20 or more doctor's degrees during the previous academic year. ${ }^{3}$ Institutions that awarded 20 or more master's degrees, but less than 20 doctor's degrees, during the previous academic year.

NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), "Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty Survey" (IPEDS-SA:99); and IPEDS, Winter 2009-10, Spring 2015, and Spring 2016, Human Resources component, Salaries section. (This table was prepared December 2016.)

Table 316.30. Average salary of full-time instructional faculty on 9-month contracts in degree-granting postsecondary institutions, by control and level of institution and state or jurisdiction: 2015-16
[In current dollars]

## -Not available

${ }^{1}$ Large increases are due to the addition of schools accredited by the Accrediting Commission of Career Schools and Colleges of Technology.
NOTE: Data through 1995-96 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Titte IV federal financial aid programs. Changes in counts of institutions over time are partly affected by increasing or decreasing numbers of institutions submitting separate data for branch campuses.

## Not applicable

Research universities with a very high level of research activity
Research universities with a high level of research activity.
Institutions that award at least 20 doctor's degrees per year, but did not have a high level of research activity.
Institutions that primarily emphasize undergraduate education. Also includes institutions classified as 4 -year under the IPEDS system, which had been classified as 2 -year in the Carnegie classification system because they primarily award associate's degrees.
${ }^{6}$ Four-year instiulions that award degrees primarily in single fields of study, such as medicine, business, fine arts, theology and engineering,
NOTE: Branch campuses are counted as separate institutions. Relative levels of research activity for research universities were determined by an analysis of research and development expenditures, science and engineering research staffing,
and doctoral degrees conferred, by field. Further information on the research index ranking may be obtained from http: carnegieclassifications.iu.edu/. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs.

## Table 317.40. Number of degree-granting postsecondary institutions and enrollment in these institutions, by enrollment size, control, and classification of institution: Fall 2015-Continued

${ }^{1}$ Excludes 21 institutions that had no enrollment.
${ }^{2}$ Research universities with a very high level of research activity.
${ }^{3}$ Research universities with a high level of research activity.
${ }^{4}$ Institutions that award at least 20 doctor's degrees per year, but did not have a high level of research activity.
${ }^{5}$ Institutions that award at least 50 master's degrees per year.
${ }^{6}$ Institutions that primarily emphasize undergraduate education. Also includes institutions classi-
fied as 4-year under the IPEDS system, which had been classified as baccalaureate/associate's
colleges in the Carnegie system because they primarily award associate's degrees.
${ }^{7}$ Institutions that award degrees primarily in single fields of study, such as medicine, business, fine arts, theology, and engineering.
${ }^{8}$ Institutions that award less than 30 percent of their awards in career and technical programs 9 Institutions that award 30 to 49 percent of their awards in career and technical programs.
${ }^{10}$ Institutions that award 50 percent or more of their awards in career and technical programs.
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Relative levels of research activity for research universities were determined by an analysis of research and development expenditures, science and engineering research staffing, and doctoral degrees conferred, by field. Further information on the research index ranking may be obtained from http://carnegieclassifications.iu.edu/.

## -Not available

NOTE: This table indicates the year by which the institution no longer operated (generally it closed at the end of or during the prior year). Data through 1995-96 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financia aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes more 2-year colleges and excludes a few higher education
institutions that did not grant degrees.

－Not available．
${ }^{1}$ Includes Ph．D．，Ed．D．，and comparable degrees at the doctoral level．Includes most degrees
formerly classified as first－professional，such as M．D．，D．D．S．，and law degrees．
${ }^{2}$ ncludes some degrees classified as master＇s or doctor＇s degrees in later years．

## ${ }^{3}$ Projected．

NOTE：Data through 1994－95 are for institutions of higher education，while later data are for
degree－granting institutions．Degree－granting institutions grant associate＇s or higher degrees
and participate in Title IV federal financial aid programs．Some data have been revised from previously published figures．Detail may not sum to totals because of rounding．

－Not available．
${ }^{1}$ Includes Ph．D．，Ed．D．，and comparable degrees at the doctoral level．Includes most degrees formerly classified as first－ professional，such as M．D．，D．D．S．，and law degrees．
${ }^{2}$ Part of the increase is due to the addition of schools accredited by the Accrediting Commission of Career Schools and Colleges of Technology，

NOTE：Data through 1990－91 are for institutions of higher education，while later data are for postsecondary institutions that par－ ticipate in Titte IV federal financial aid programs．Data for associate＇s degrees and higher awards are for degree－granting institu－ tions．Some data have been revised from previously published figures．

Includes Ph.D., Ed.D., and comparable degrees at the doctoral level, as well as such degrees as M.D., D.D.S., and law degrees that were formerly classitied as first-professional degrees.
${ }^{2}$ Excludes "Construction trades" and "Mechanic and repair technologies/technicians," which are listed separately.
NOTE: Data are for degree-granting postsecondary institutions, which are institutions that grant associate's or higher degrees and participate in Title IV federal financial aid programs. To facilitate trend comparisons, certain aggregations have been
made of the degree fields as reported in the Integrated Postsecondary Education Data System (IPEDS): "Agriculture and natural resources" includes Agriculture, agriculture operations, and related sciences and Natural resources and conservation; and "Business" includes Business management, marketing, and related support services and Personal and culinary services. SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data
System (IPEDS), Fall 2015, Completions component. (This table was prepared February 2017.)

Non-degree-granting institutions do not offer accredited 4-year or 2-year programs for degrees at the associate's or higher level, but they may include institutions offering programs 2 years or longer in duration for lower level awards.
${ }^{2}$ Excludes "Construction trades" and "Mechanic and repair technologies/technicians," which are listed separately.
3Includes design and applied arts, drama and theatre arts, film and photographic arts, and all other arts not included under "Fine
and studio arts" or "Music and dance."

NOTE: Data are for postsecondary institutions participating in Title IV federal financial aid programs. Degree-granting institutions grant degrees at the associate's or higher level, while non-degree-granting institutions grant only awards below that level. ## —Not available.

NOTE: Includes less-than-1-year awards and 1- to less-than-4-year awards (excluding associate's degrees) conferred by postsecondary institutions participating in Title IV federal financial aid programs. Race categories exclude persons of Hispanic ethnicity Reported racial/ethnic distributions of students by level of degree, field of degree, and sex were used to estimate race/ethnicity for students whose race/ethnicity was not reported

Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), "Completions Survey" (IPEDSC:99); and IPEDS Fall 2000 through Fall 2015, Completions component. (This table was prepared September 2016.)

Table 321.10. Associate's degrees conferred by postsecondary institutions, by sex of student and discipline division: 2004-05 through 2014-15

基 NOTE: Data are for degree-granting postsecondary institutions, which are institutions that grant associate's or higher degrees and participate in Title IV federal financial aid programs. Race categories exclude persons of Hispanic ethnicity. Reported racialethnic distributions of students by level of degree, field of degree, and sex were used to estimate race/ethnicity for students whose race/ethnicity was not reported. To facilitate trend comparisons, certain aggregations have been made of the degree fields as reported in the Inte-
ions, and related sci Education Data System (PEDS): Agriculture and naural resources includes Agriculture, agriculture operarelated support services and Personal and culinary services. Some data have been revised from previously published figures. SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data Sys-
tem (IPEDS), Fall 2014 and Fall 2015, Completions component. (This table was prepared September 2016.)

NOTE: Data through 1990-91 are for institutions of higher education, while later data are for postsecondary institutions that participate in Title IV federal financial aid programs. The new Classification of Instructional Programs was initiated in 2009-10. The figures for earlier years have been reclassified when necessary to make them conform to the new taxonomy. To facilitate trend comparisons, certain aggregations have been made of the degree fields as reported in the Integrated Postsecondary Education Data System (IPEDS): "Agriculture and natural resources" includes Agriculture, agriculture operations, and
related sciences and Natural resources and conservation; "Business" includes Business, management, marketing, and related support services and Personal and culinary services; and "Engineering technologies" includes Engineering technolo-
gies and engineering-related fields, Construction trades, and Mechanic and repair technologies/technicians. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Higher Education General Information Survey (HEGIS), "Degrees and Other Formal Awards Conferred" surveys, 1970-71 through 1985-86; Integrated Postsecond Fall 2000 through Fall 2015, Com pletions component. (This table was prepared September 2016.)

Table 322.20. Bachelor's degrees conferred by postsecondary institutions, by race/ethnicity and sex of student: Selected years, 1976-77 through 2014-15

| Year and sex | Number of degrees conferred to U.S. citizens and nonresident aliens |  |  |  |  |  |  |  | Percentage distribution of degrees conferred to U.S. citizens |  |  |  |  |  |  |

## -Not available.

${ }^{1}$ Excludes 1,121 males and 528 females whose racial/ethnic group was not available.
${ }^{2}$ Excludes 258 males and 82 females whose racial/ethnic group was not available.
NOTE: Data through 1990-91 are for institutions of higher education, while later data are for postsecondary institutions participating in Title IV federal financial aid programs. Race categories exclude persons of Hispanic ethnicity. For 1989-90 and later years, reported racial/ ethnic distributions of students by level of degree, field of degree, and sex were used to esti-
mate race/ethnicity for students whose race/ethnicity was not reported. Detail may not sum to totals because of rounding. Some data have been revised from previously published figures. SOURCE: U.S. Department of Education, National Center for Education Statistics, Higher Education General Information Survey (HEGIS), "Degrees and Other Formal Awards Conferred" surveys, 1976-77 and 1980-81; Integrated Postsecondary Education Data System (IPEDS), "Completions Survey" (IPEDS-C:90-99); and IPEDS Fall 2000 through Fall 2015, Completions component. (This table was prepared September 2016.)

| ${ }^{1}$ Excludes "Construction trades" and "Mechanic and repair technologies/technicians," which are listed separately. NOTE: Data are for postsecondary institutions participating in Title IV federal financial aid programs. Race categories exclude persons of Hispanic ethnicity. Reported racial/ethnic distributions of students by level of degree, field of degree, and sex were used to estimate race/ethnicity for students whose race/ethnicity was not reported. To facilitate trend comparisons, certain aggregations have been made of the degree fields as reported in the Integrated Postsecondary Education Data System (IPEDS): "Agriculture and natu- <br> ral resources" includes Agriculture, agriculture operations, and related sciences and Natural resources and conservation; and "Business" includes Business management, marketing, and related support services and Personal and culinary services. Some data have been revised from previously published figures. <br> SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Fall 2014 and Fall 2015, Completions component. | 'Excludes "Construction trades" and "Mechanic and repair technologies/technicians," which are listed separately. <br> NOTE: Data are for postsecondary institutions participating in Title IV federal financial aid programs. Race categories exclude persons of Hispanic ethnicity. Reported racia/ethnic distributions of students by level of degree, field of degree, and sex were used to estimate race/ethnicity for students whose race/ethnicity was not reported. To facilitate trend comparisons, certain aggregations have been made of the degree fields as reported in the Integrated Postsecondary Education Data System (IPEDS): "Agriculture and natu- <br> ral resources" includes Agriculture, agriculture operations, and related sciences and Natural resources and conservation; and "Business" includes Business management, marketing, and related support services and Personal and culinary services. Some data have been revised from previously published figures. <br> SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Fall 2014 and Fall 2015, Completions component. NOTE: Data through 1990-91 are for institutions of higher education, while later data are for postsecondary institutions that participate in Title IV federal financial aid programs. The new Classification of Instructional Programs was initiated in 2009-10. The figures for earlier years have been reclassified when necessary to make them conform to the new taxonomy. To facilitate trend comparisons, certain aggregations have been made of the degree fields as reported in the Integrated Postsecondary Education Data System (IPEDS): "Agriculture and natural resources" includes Agriculture, agriculture operations, and related support services and Personal and culinary services; and "Engineering technologies" includes Engineering technolo-
gies and engineering-related fields, Construction trades, and Mechanic and repair technologies/technicians. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Higher Education General Information Survey (HEGIS), "Degrees and Other Formal Awards Conferred" surveys, 1970-71 through 1985-86; Integrated Postsecond-
ary Education Data System (IPEDS), "Completions Survey" (IPEDS-C.91-99); and IPEDS Fall 2000; through Fall 2015, Completions component. (This table was prepared September 2016.)

## -Not available.

${ }^{1}$ Excludes 387 males and 175 females whose racial/ethnic group was not available. ${ }^{2}$ Excludes 1,377 males and 179 females whose racial/ethnic group was not available NOTE: Data through 1990-91 are for institutions of higher education, while later data are for postsecondary institutions participating in Title IV federal financial aid programs. Race categories exclude persons of Hispanic ethnicity. For 1989-90 and later years, reported racia//ethnic distributions of students by level of degree, field of degree, and sex were used to estimate race/ethnicity for students whose race/ethnicity was not reported. Detail
may not sum to totals because of rounding. Some data have been revised from previusly published figures.

NOTE: Data through 1990-91 are for institutions of higher education, while later data are for postsecondary institutions that participate in Title IV federal financial aid programs. The new Classification of Instructional Programs was initiated in 2009-10. Includes Ph.D., Ed.D., and comparable degrees at the doctoral level, as well as such degrees as M.D., D.D.S., and law degrees that were formerly classified as first-professional degrees. The figures for earlier years have been reclassified when necessary to make them conform to the new taxonomy. To facilitate trend comparisons, certain aggregations have been made of the degree fields as reported in the Integrated Postsecondary Education Data System (IPEDS): "Agriculture and nat-
ural resources" includes Agriculture, agriculture operations, and related sciences and Natural resources and conservation;

Business" includes Business, management, marketing, and related support services and Personal and culinary services and "Engineering technologies" includes Engineering technologies and engineering-related fields, Construction
SOURCE: U.S. Department of Education, National Center for Education Statistics, Higher Education General Information Survey (HEGIS), "Degrees and Other Formal Awards Conferred" surveys, 1970-71 through 1985-86; Integrated Postsecondary Education Data System (IPEDS), "Completions Survey" (IPEDS-C:91-99); and IPEDS Fall 2000 through Fall 2015, Com-
pletions component. (This table was prepared September 2016.)

Table 324.20. Doctor's degrees conferred by postsecondary institutions, by race/ethnicity and sex of student: Selected years, 1976-77 through 2014-15

| Year and sex | Number of degrees conferred ${ }^{1}$ to U.S. citizens and nonresident aliens |  |  |  |  |  |  |  | Percentage distribution of degrees conferred' to U.S. citizens |  |  |  |  |  |  |

## -Not available.

${ }^{1}$ Includes Ph.D., Ed.D., and comparable degrees at the doctoral level, as well as such degrees as M.D., D.D.S., and law degrees that were formerly classified as first-professional degrees.
${ }^{2}$ Excludes 500 males and 12 females whose racial/ethnic group was not available.
${ }^{3}$ Excludes 714 males and 21 females whose racial/ethnic group was not available.
NOTE: Data through 1990-91 are for institutions of higher education, while later data are for postsecondary institutions participating in Title IV federal financial aid programs. Race categories exclude persons of Hispanic ethnicity. For 1989-90 and later years, reported racial/ethnic
distributions of students by level of degree, field of degree, and sex were used to estimate race/ ethnicity for students whose race/ethnicity was not reported. Detail may not sum to totals because of rounding. Some data have been revised from previously published figures.

## \#Rounds to zero.

${ }^{1}$ Includes agricultural sciences and natural resources; biological and biomedical sciences; and health sciences.
${ }^{2}$ Distribution based on respondents reporting sex data.
${ }^{3}$ Distribution based on U.S. citizens and permanent residents.
${ }^{4}$ Includes Pacific Islanders and persons whose race was not reported.
${ }^{5}$ Percentages are based on only those doctorate recipients who responded to questions abou postgraduation plans.
${ }^{6}$ Excludes doctorate recipients who indicated plans for another full-time degree program. Percentages are based on doctorate recipients reporting other definite postgraduation plans for study. ${ }^{7}$ Includes respondents who indicated definite postgraduation study plans for traineeship, internship/clinical residency, or other study.
${ }^{8}$ Percentages are based on only those doctorate recipients who indicated definite postgraduation plans for employment and who indicated the sector of employment.
${ }^{9}$ Includes 2-year, 4 -year, and foreign colleges and universities, and medical schools.
${ }^{10}$ "Other" is mainly composed of elementary and secondary schools.
${ }^{11}$ Includes doctorate recipients who indicated that they did not plan to work or study, those who
indicated some other type of postgraduation plans, and those who indicated definite plans for another full-time degree program.
${ }^{12}$ Percentages are based on only those doctorate recipients who indicated definite postgraduation
plans for employment and who indicated their primary work activity.
${ }^{13}$ Percentages are based on only those doctorate recipients who indicated definite postgraduation plans and type of plans.
NOTE: The above classification of degrees by field differs somewhat from that in most publications of the National Center for Education Statistics (NCES). One major difference is that history is included under humanities rather than social sciences. Includes Ph.D., Ed.D., and comparable degrees at the doctoral level. Includes only graduates of research programs, which typically require the preparation and defense of a dissertation based on original research, or the planning and execution of an original project demonstrating substantial artistic or scholarly achievement. Excludes nonresearch professional practice doctor's degrees (e.g., M.D., D.D.S., and J.D.) that are conferred upon completion of a program providing the knowledge and skills for the recognition, credential, or license required for professional practice in such fields as health and theology. The number of doctor's degrees in this table differs from that reported in the NCES Integrated Postsecondary Education Data System (IPEDS), which includes both the research and nonresearch degrees. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.
SOURCE: Doctorate Recipients From U.S. Universities: 2014 and 2015, Survey of Earned Doctorates, National Science Foundation, National Institutes of Health, U.S. Department of Education, National Endowment for the Humanities, U.S. Department of Agriculture, and the National Aeronautics and Space Administration. (This table was prepared June 2017.)

NOTE: Data are for postsecondary institutions participating in Title IV federal financial aid programs. Includes degrees in engineering, engineering-related technologies, mechanic and repair technologies, and construction trades for 1969-70 and later years. Degrees in engineering include degrees in all areas of engineering-for example, chemical, civil, electrical, and mechanical engineering-as well as degrees in general engineering. Some data have been revised from previously published figures.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Earned Degrees Conferred, 1949-50 and 1959-60; Higher Education General Information Survey HEGIS), "Degrees and Other Formal Awards Conferred" surveys, 1969-70 through 1985-86; Integrated Postsecondary Education Data System (IPEDS), "Completions Survey" (IPEDS-C:87-99); and IPEDS Fall 2000 through Fall 2015, Completions component. (This table was prepared January 2017.)

Table 326.10. Graduation rate from first institution attended for first-time, full-time bachelor's degree-seeking students at 4-year postsecondary institutions, by race/ethnicity, time to completion, sex, control of institution, and acceptance rate: Selected cohort entry years, 1996 through 2009

## －Not available

${ }^{-}$Includes data for institutions not reporting admissions data，which are not separately shown NOTE：Data are for 4 －year degree－granting postsecondary institutions participating in Title IV federal financial aid programs．Graduation rates refer to students receiving bachelor＇s degrees from their initial institutions of attendance only．Totals include data for persons whose
race／ethnicity was not reported．Race categories exclude persons of Hispanic ethnicity．Some data have been revised from previously published figures．
SOURCE：U．S．Department of Education，National Center for Education Statistics，Integrated Postsecondary Education Data System（IPEDS），Spring 2002 through Spring 2013 and Win－ ter 2013－14 through Winter 2015－16，Graduation Rates component；and IPEDS Fall 2009， Institutional Characteristics component．（This table was prepared October 2016．）

Table 326.20. Graduation rate from first institution attended within 150 percent of normal time for first-time, full-time degree/certificate-seeking students at 2-year postsecondary institutions, by race/ethnicity, sex, and control of institution: Selected cohort entry years, 2000 through 2012

## —Not available．

$\ddagger$ Reporting standards not met（too few cases）
NOTE：Data are for 2－year degree－granting postsecondary institutions participating in Title IV federal financial aid programs．Graduation rates refer to students receiving associate＇s degrees or certificates from their initial institutions of attendance only．Totals include data for persons whose race／ethnicity was not reported．Race categories exclude persons of

Hispanic ethnicity．Some data have been revised from previously published figures． SOURCE：U．S．Department of Education，National Center for Education Statistics，Inte－ grated Postsecondary Education Data System（IPEDS），Spring 2002 through Spring 2013 and Winter 2013－14 through Winter 2015－16，Graduation Rates component．（This table was prepared October 2016．）

Table 326.30. Retention of first-time degree-seeking undergraduates at degree-granting postsecondary institutions, by attendance status, level and control of institution, and percentage of applications accepted: Selected years, 2006 to 2015

See notes at end of table.

$\dagger$ Not applicable.
Adjusted student counts exclude students who died or were totally and permanently disabled, served in the armed forces (includ-
ing those called to active duty), served with a foreign aid service of the federal government (e.g., Peace Corps), or served on official
church missions. For 4-year institutions, the adjusted cohort is based on first-time bachelor's degree-seeking students.

NOTE: Returning students data for 2-year institutions include returning students, plus students who completed their program. SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2008 through Spring 2016, Fall Enrollment component; and IPEDS Fall 2006 through Fall 2014, Institutional Characteristics component. (This table was prepared October 2016.)

$\dagger$ Not applicable.
\#Rounds to zero.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
Includes a small percentage of students who had attained a degree and were still enrolled. Includes recipients of degrees not shown separately.
${ }_{2}$ Includes a small percentage of students who had attained an advanced degree.
${ }^{3}$ Includes students with a standard high school diploma who enrolled in postsecondary education in the same year as their graduation.
Indicates the income quartile of the student, based on the student's total income in 2002 for independent students or the parents' total income in 2002 for dependent students. Income quartiles were determined separately for dependent and independent students based on percentile rankings and then combined into one variable.
NOTE: Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding SOURCE: U.S. Department of Education, National Center for Education Statistics, 2004/09 Beginning Postsecondary Students Longitudinal Study (BPS:04/09). (This table was prepared November 2011),

## -Not available.

${ }^{1}$ Excludes suicides, fetal deaths, traffic fatalities, accidental deaths, and justifiable homicide (such as the killing of a felon by a law enforcement officer in the line of duty).
${ }^{2}$ Killing of another person through gross negligence (excludes traffic fatalities).
${ }^{3}$ Any sexual act directed against another person forcibly and/or against that person's will.
${ }^{4}$ Includes only statutory rape or incest.
${ }^{5}$ Taking or attempting to take anything of value using actual or threatened force or violence.
${ }^{6}$ Attack upon a person for the purpose of inflicting severe or aggravated bodily injury.
${ }^{7}$ Unlawful entry of a structure to commit a felony or theft.
-Theft or attempted theft of a motor vehicle.
${ }^{9}$ Willful or malicious burning or attempt to burn a dwelling house, public building, motor vehicle, or personal property of another.
${ }^{10} \mathrm{If}$ an individual is both arrested and referred to college officials for disciplinary action for a single offense, only the arrest is counted.

NOTE: Data are for degree-granting institutions, which are institutions that grant associate's or higher degrees and participate in Title IV federal financial aid programs. Some institutions that report Clery data-specifically, non-degree-granting institutions and institutions outside of the 50 states and the District of Columbia-are excluded from this table. Crimes, arrests, and referrals include incidents involving students, staff, and on-campus guests. Excludes off-campus crimes and arrests even if they involve college students or staff. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, Office of Postsecondary Education, Campus Safety and Security Reporting System, 2001 through 2014; and National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Fall 2002 through Fall 2014, Institutional Characteristics component. (This table was prepared September 2016.)

Table 329.20. On-campus crimes, arrests, and referrals for disciplinary action per 10,000 full-time-equivalent (FTE) students at degree-granting postsecondary institutions, by whether institution has residence halls, control and level of institution, and type of incident: 2001 through 2014

| Control and level of institution and type of incident | Number of incidents per 10,000 full-time-equivalent (FTE) students ${ }^{1}$ |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## -Not available

${ }^{1}$ Although crimes, arrests, and referrals include incidents involving students, staff, and campus guests, they are expressed as a ratio to FTE students because comprehensive FTE counts of all these groups are not available.
${ }^{2}$ Excludes suicides, fetal deaths, traffic fatalities, accidental deaths, and justifiable homicide (such as the killing of a felon by a law enforcement officer in the line of duty).
${ }^{3}$ Killing of another person through gross negligence (excludes traffic fatalities).
${ }^{4}$ Any sexual act directed against another person forcibly and/or against that person's will.
${ }^{5}$ Includes only statutory rape or incest.
${ }^{6}$ Taking or attempting to take anything of value using actual or threatened force or violence.
${ }^{7}$ Attack upon a person for the purpose of inflicting severe or aggravated bodily injury.
${ }^{8}$ Unlawful entry of a structure to commit a felony or theft.
${ }^{9}$ Theft or attempted theft of a motor vehicle.
${ }^{10}$ Willful or malicious burning or attempt to burn a dwelling house, public building, motor vehicle , or personal property of another.
${ }^{11}$ If an individual is both arrested and referred to college officials for disciplinary action for a single offense, only the arrest is counted.
NOTE: Data are for degree-granting institutions, which are institutions that grant associate's or higher degrees and participate in Title IV federal financial aid programs. Some institutions that report Clery data-specifically, non-degree-granting institutions and institutions outside of the 50 states and the District of Columbia-are excluded from this table. Crimes, arrests, and referrals include incidents involving students, staff, and on-campus guests. Excludes off-campus crimes and arrests even if they involve college students or staff. Detail may not sum to totals because of rounding. Some data have been revised from previously published figures.

## -Not available.

${ }^{1}$ Bias categories correspond to characteristics against which the bias is directed (i.e., race, ethnicity, religion, sexual orientation, gender, gender identity, or disability).
${ }^{2}$ Excludes suicides, fetal deaths, traffic fatalities, accidental deaths, and justifiable homicide (such as the killing of a felon by a law enforcement officer in the line of duty).
${ }^{3}$ Any sexual act directed against another person forcibly and/or against that person's will.
${ }^{4}$ Includes only statutory rape or incest.
${ }^{5}$ Taking or attempting to take anything of value using actual or threatened force or violence. ${ }^{6}$ Attack upon a person for the purpose of inflicting severe or aggravated bodily injury. ${ }^{7}$ Unlawful entry of a structure to commit a felony or theft.
${ }^{8}$ Theft or attempted theft of a motor vehicle.
${ }^{9}$ Willful or malicious burning or attempt to burn a dwelling house, public building, motor vehicle, or personal property of another.
${ }^{10} \mathrm{~A}$ physical attack by one person upon another where neither the offender displays a weapon, nor the victim suffers obvious severe or aggravated bodily injury involving apparent broken bones, loss of teeth, possible internal injury, severe laceration, or loss of consciousness.
${ }^{11}$ The unlawful taking, carrying, leading, or riding away of property from the possession of another. ${ }^{12}$ Placing another person in reasonable fear of bodily harm through the use of threatening words and/or other conduct, but without displaying a weapon or subjecting the victim to actual physical attack.
${ }^{13}$ Willfully or maliciously destroying, damaging, defacing, or otherwise injuring real or personal property without the consent of the owner or the person having custody or control of it.
NOTE: Data are for degree-granting institutions, which are institutions that grant associate's or higher degrees and participate in Title IV federal financial aid programs. Some institutions that report Clery data-specifically, non-degree-granting institutions and institutions outside of the 50 states and the District of Columbia-are excluded from this table. A hate crime is a criminal offense that is motivated, in whole or in part, by the perpetrator's bias against a group of people based on their race, ethnicity, religion, sexual orientation, gender, gender identity, or disability. Includes on-campus incidents involving students, staff, and on-campus guests. Excludes off-campus crimes and arrests even if they involve college students or staff. SOURCE: U.S. Department of Education, Office of Postsecondary Education, Campus Safety and Security Reporting System, 2009 through 2014. (This table was prepared August 2016.)

Table 330.10. Average undergraduate tuition and fees and room and board rates charged for full-time students in degree-granting postsecondary institutions, by level and control of institution: 1963-64 through 2015-16

${ }^{1}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to an academic-year basis.
${ }^{2}$ For public institutions, in-state tuition and required fees are used
${ }^{3}$ Data for 1986-87 and later years reflect a basis of 20 meals per week, while data for earlier years are for meals served 7 days a week (the number of meals per day was not specified). Because of this revision in data collection and tabulation procedures, data are not entirely comparable with figures for previous years. In particular, data on board rates are somewhat higher than in earlier years because they reflect the basis of 20 meals per week rather than meals served 7 days a week. Since many institutions serve ${ }^{4}$ Room and board data are estimated.
NOTE: Data are for the entire academic year and are average charges for full-time students. Tuition and fees were weighted by the number of full-time-equivalent undergraduates, but were not adjusted to reflect student residency. Room and board are based on full-time students. Data through 1995-96 are for institutions of higher education, while later data are for degree-granting institutions.

Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes more 2-year colleges and excludes a few higher education institutions that did not grant degrees. Because of their low response rate, data for private 2 -year colleges must be interpreted with caution. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.
Higher Education General Information Survey (HEGIS) "Institutional Characteristics of Coll Education Statistics to 1986-87, 1969-70 through 1985-86; "Fall Enrollment in Institutions of Higher Education" surveys, 1963 through 1985; Integrated Postsecondary Education Data System (IPEDS), "Fall Enrollment Survey" (IPEDS-EF:86-99) and "Institutional Characteristics Survey" (IPEDS-IC:86-99); IPEDS Spring 2001 through Spring 2016, Fall Enrollment component; and IPEDS Fall 2000 through Fall 2015, Institutional Characteristics component. (This table was prepared November 2016.)

Table 330.20. Average undergraduate tuition and fees and room and board rates charged for full-time students in degree-granting postsecondary institutions, by control and level of institution and state or jurisdiction: 2014-15 and 2015-16
[In current dollars]

## $\dagger$ Not applicable.

NOTE: Data are for the entire academic year and are average charges for full-time students In-state tuition and fees were weighted by the number of full-time-equivalent undergraduates, but were not adjusted to reflect the number of students who were state residents. Out-of-state tuition and fees were weighted by the number of first-time freshmen attending the institution in fall 2014 from out of state. Institutional room and board rates are weighted by the number of full-time students. Degree-granting institutions grant associate's or higher degrees and par-
ticipate in Title IV federal financial aid programs. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Fall 2014 and Fall 2015, Institutional Characteristics component; and Spring 2015 and Spring 2016, Fall Enrollment component. (This table was prepared November 2016.)

Table 330.30. Average undergraduate tuition, fees, room, and board rates for full-time students in degree-granting postsecondary institutions, by percentile of charges and control and level of institution: Selected years, 2000-01 through 2015-16

${ }^{1}$ Average undergraduate tuition and fees are based on in-state students only.
NOTE: Data are for the entire academic year and are average charges for full-time students. Student charges were weighted by the number of full-time-equivalent undergraduates, but were not adjusted to reflect student residency. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Some data have been revised from previously published figures.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Fall 2000 through Fall 2015, Institutional Characteristics component; and Spring 2001 through Spring 2016, Fall Enrollment component. (This table was prepared February 2017.)

Table 330.40. Average total cost of attendance for first-time, full-time undergraduate students in degree-granting postsecondary institutions, by control and level of institution, living arrangement, and component of student costs: Selected years, 2009-10 through 2015-16

Table 330.50. Average graduate tuition and required fees in degree-granting postsecondary institutions, by control of institution and percentile of charges: 1989-90 through 2015-16

## -Not available.

${ }^{1}$ Data are based on in-state tuition only.
NOTE: Average graduate student tuition weighted by fall full-time-equivalent graduate enrollment. Excludes doctoral students in professional practice programs. Data through 1995-96 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes more 2 -year colleges and
excludes a few higher education institutions that did not grant degrees. Some data have been revised from previously published figures.

${ }^{1}$ Average amounts for students participating in indicated programs.
${ }^{2}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to an academic-year basis made directly to parents.

NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data through 2009-10 are for students receiving aid, while later data are for students awarded aid. Students receiving aid are those who were not only awarded aid, but also accepted it. Some data have been revised from previously published figures.

'Grant and scholarship aid consists of federal Title IV grants, as well as other grant or scholarship aid from the federal govern-
ment, state or local governments, or institutional sources. Title IV grants include Federal Pell Grants, Federal Supplemental Edu-
cational Opportunity Grants (FSEOGs). Academic Competitiveness Grants (ACGs), National Science and Mathematics Access cational Opportunity Grants (FSEOGs), Academic Competitiveness Grants (ACGs), National Science and Mathematics Access (TEACH) Grants. The average amount of grant and scholarship aid by income level was calculated based on all students who received any type of Title IV aid, even those students who received zero Title IV aid in the form of grants and received Title IV aid only in the form of work-study aid or loan aid.
${ }^{2}$ Net price is the total cost of attendance minus grant and scholarship aid from the federal government, state or local governments, or institutional sources. However, average net price by income level was calculated based on all students who received any type of Title IV aid, even those who received zero Title IV aid in the form of grants and received Title IV aid only in the form of work-study aid or loan aid.
${ }^{3}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to an academic-year basis.
NOTE: Excludes students who previously attended another postsecondary institution or who began their studies on a part-time basis. Includes only first-time, full-time students who paid the in-state or in-district tuition rate (if they attended public institutions)
and who received Title IV aid. Excludes the approximately 17 percent of students who did not receive any Title IV aid. Title IV aid includes grant aid, work-study aid, and loan aid. Data are weighted by the number of students at the institution receiving Title IV aid. Totals include students for whom income data were not available. Some data have been revised from previously published figures. SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2011 and Winter 2013-14 through Winter 2015-16, Student Financial Aid component. (This table was
prepared November 2016.)

Table 331.35. Percentage of full-time, full-year undergraduates receiving financial aid, and average annual amount received, by source of aid and selected student characteristics: Selected years, 1999-2000 through 2011-12

Table 331.35. Percentage of full-time, full-year undergraduates receiving financial aid, and average annual amount received, by source of aid and selected student characteristics: Selected years, 1999-2000 through 2011-12-Continued
[Standard errors appear in parentheses. Amounts in constant 2015-16 dollars]

## - Not available. <br> $\dagger$ Not applicable.

$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50
percent or greater.
Includes students who reported they were awarded aid but did not specify the source of aid.
${ }^{3}$ Includes Department of Veterans Affairs and Department of Defense benefits.
${ }^{\text {In }}$ ILcludes Department of Veterans Affairs and Department of Defense benefits.
25 th to the 75 th percentile, and high-income students have family incomes above the 75 th percentile.
${ }^{5}$ The 2012 questionnaire did not offer students the option of choosing an "Other" race category.

Includes students who were single, divorced, or widowed.
NOTE: Full-time, full-year undergraduates are those who were enrolled full time for 9 or more months at one or more institutions. Data include undergraduates in degree-granting and non-degree-granting institutions. Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to an academic-year from different sources. Data exclude Puerto Rico. Race categories exclude persons of Hispanic ethnicity. SOURCE: U.S. Department of Education, National Center for Education Statistics, 1999-2000, 2003-04, 2007-08, and
2011-12 National Postsecondary Student Aid Study (NPSAS:2000, NPSAS:04, NPSAS:08, and NPSAS:12). (This table was prepared September 2016.)

## †Not applicable

!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent
$\ddagger$ Reporting standards not met (too few cases for a reliable estimate).
${ }^{1}$ Includes students who reported they were awarded aid, but did not specify the source or type of aid
${ }^{3}$ Includes Parent Loans for Undergraduate Students (PLUS)
${ }^{4}$ Details on federal and nonfederal work-study participants are not available
${ }^{5}$ Includes students who were single, divorced, or widowed.
NOTE: Aid averages are for those students who received the specified type of aid. Detail may not sum to totals because of rounding and because some students receive multiple types of aid and aid from different sources. Full-time, full-year undergraduates were enrolled full time for 9 or more months at one or more institutions. Data include undergraduates in degree-granting SOURCE: U. . Department of Education, National Center for Education Statistics, 2011-12 National Postsecondary S Aid Study (NPSAS:12). (This table was prepared January 2014.)

Table 331.50. Amount borrowed, aid status, and sources of aid for full-time and part-time undergraduates, by control and level of institution: 2007-08 and 2011-12
[Standard errors appear in parentheses]

-Not available.
$\dagger$ Not applicable.
! Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
${ }^{1}$ Numbers of undergraduates may not equal figures reported in other tables, since these data are based on a sample survey of students who enrolled at any time during the academic year.
${ }^{2}$ Includes only those students who borrowed to finance their undergraduate education Excludes loans from family sources.

Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to a school-year basis.
${ }^{4}$ Includes students who reported that they were awarded aid, but did not specify the source of the aid.
Includes Department of Veterans Affairs and Department of Defense benefits
NOTE: Excludes students whose attendance status was not reported. Detail may not sum to totals because of rounding and because some students receive multiple types of aid and aid from different sources. Data exclude Puerto Rico. Some data have been revised from previously published figures.

!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
Details on nonfederal work-study participants are not available.
2Includes students who reported they were awarded aid, but did not specify the source of aid.
${ }^{3}$ Includes Department of Veterans Affairs and Department of Defense benefits.
${ }^{4}$ Includes Parent Loans for Undergraduate Students (PLUS).
NOTE: Excludes students whose attendance status was not reported. Detail may not sum to totals because of rounding and because some students receive multiple types of aid and aid from different sources. Data exclude Puerto Rico. Some data have been revised from previously published figures.
SOURGE. U.S. Department of Education, National Center for Education Statistics, 1992-93, 1999-2000, 2007-08, and 201 prepared August 2014.)

Not applicable.
IInterpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
etails on nonfederal work-study participants are not available.
2Includes students who reported that they were awarded aid, but did not specify the source or type of aid.
ncludes Department of Veterans Affairs and Department of Defense benefits.
ndicates all grants, scholarships, or tuition waivers received from federal, state, institutional, or private sources, including employers.
${ }^{5}$ Includes Parent Loans for Undergraduate Students (PLUS).
${ }^{6}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to a school-year basis.
NOTE: Aid averages are for those students who received the specified type of aid. Full-time, full-year students were enrolled full time for 9 or more months from July 1 through June 30. Data exclude Puerto Rico. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, National Center for Education Statistics, 1992-93, 1995-96, 1999-2000, 2003-04, and NPSAS:12). (This table was prepared August 2016.)

Table 331.90. Percentage of full-time and part-time undergraduates receiving federal aid, by aid program and control and level of institution: 2007-08 and 2011-12

$\dagger$ Not applicable.
\#Rounds to zero.
! Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
${ }^{1}$ Numbers of undergraduates may not equal figures reported in other tables, since these data are based on a sample survey of students who enrolled at any point during the year.
${ }^{2}$ Title IV of the Higher Education Act.
${ }^{3}$ Supplemental Educational Opportunity Grants.
${ }^{4}$ College Work Study. Prior to October 17, 1986, private for-profit institutions were prohibited by law from spending CWS funds for on-campus work. Includes persons who participated in the program but had no earnings.
${ }^{5}$ Formerly National Direct Student Loans (NDSL).
${ }^{6}$ Formerly Guaranteed Student Loans (GSL).
Parent Loans for Undergraduate Students.
NOTE: Excludes students whose attendance status was not reported. Detail may not sum to totals because of rounding and because some students receive multiple types of aid and aid from different sources. Data exclude Puerto Rico. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, National Center for Education Statistics, 2007-08 and 2011-12 National Postsecondary Student Aid Study (NPSAS:08 and NPSAS:12). (This table was prepared July 2014.)

Table 331.95. Percentage of undergraduate students ages 18 to 24 in their 4th (senior) year or above who ever received federal loans, nonfederal loans, or Parent Loans for Undergraduates (PLUS), and average cumulative amount borrowed, by selected student characteristics and control and level of institution: 1989-90, 1999-2000, and 2011-12
[Standard errors appear in parentheses]

Table 331.95. Percentage of undergraduate students ages 18 to 24 in their 4th (senior) year or above who ever received federal loans, nonfederal loans, or Parent Loans for Undergraduates (PLUS), and average cumulative amount borrowed, by selected student characteristics and control and level of institution: 1989-90, 1999-2000, and 2011-12-Continued
[Standard errors appear in parentheses]

## - Not available.

## $\dagger$ Not applicable.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
loans, some PLUS loans may also be included. For 1999-2000 and 2011-12, total excludes loans from family and friends as well as PLUS loans.
Includes Stafford Loans and Perkins Loans only.
${ }^{3}$ Cumulative Stafford Loan amounts shown in the table include federal subsidized and unsubsidized Stafford Loans as well as any Supplemental Loans for Students (SLS) received in prior years. The SLS program was an unsubsidized student loan program rimited to independent students and some depend whes replaced by unsubsidized Stafford Loans, which are available to both independent and dependent students regardless of need. Subsidized Stafford Loans are available only to students with demonstrated financial need. Stafford Loans were
available through both the William D. Ford Federal Direct Loan Program and the Federal Family Education Loan Program (FFELP) until FFELP was discontinued in 2010. Since then, Stafford Loans have been referred to as Direct Loans ${ }^{4}$ Parent PLUS Loans are taken out by parents of dependent students and are used toward the students' undergraduate education. Parent PLUS Loans were available through both the William D. Ford Federal Direct Loan Program and the Federal Family Education Loan Progrs ${ }^{5}$ Includes Pacific Islanders in 1989-90
${ }^{6}$ Average loan amounts were calculated only for students who took out a loan (or whose parents took out a PLUS loan on their behalf). Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to a school-year basis.
NOTE: Data exclude Puerto Rico. Some data have been revised from previously published figures
Postral Postsecondary Student Aid Study (NPSAS:90, NPSAS:2000, and NPSAS:12). (This table was prepared December 2016.)

## Table 332.10. Amount borrowed, aid status, and sources of aid for full-time, full-year postbaccalaureate students, by level of study and control and level of institution: Selected years, 1992-93 through 2011-12

[Standard errors appear in parentheses]

## -Not available.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Includes all loans ever taken out for both graduate and undergraduate education. Does not include Parent Loans for Undergraduate Students (PLUS) or loans from families and friends. ${ }^{2}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Sta-

## tistics, U.S. Department of Labor, adjusted to a school-year basis.

${ }^{3}$ Includes students who reported they were awarded aid, but did not specify the source of aid ${ }^{4}$ Includes Department of Veterans Affairs and Department of Defense benefits.

Includes nonprofit 4-year nondoctoral institutions and for-profit 2-year-and-above institutions. ${ }^{6}$ Professional practice doctor's degrees include most degrees formerly classified as firstprofessional (such as M.D., D.D.S., and J.D.). "Other" doctor's degrees are those that are neither research/scholarship degrees nor professional practice degrees.
NOTE: Excludes students whose attendance status was not reported. Total includes some students whose level of study or control of institution was unknown. Detail may not sum to totals because of rounding and because some students receive multiple types of aid and aid from different sources. Data exclude Puerto Rico. Some data have been revised from previously published figures.
SOURCE: U.S. Department of Education, National Center for Education Statistics, 1992-93, 1999-2000, 2007-08, and 2011-12 National Postsecondary Student Aid Study (NPSAS:93, NPSAS:2000, NPSAS:08, and NPSAS:12). (This table was prepared August 2016.)

Table 332.50. Number of postsecondary students who entered the student loan repayment phase, number of students who defaulted within a 3-year period, and 3-year student loan cohort default rate, by level and control of institution: Fiscal years 2010 through 2013

${ }^{1}$ Includes borrowers from foreign and unclassified schools, which account for less than 1 percent of borrowers and are not included elsewhere.
${ }^{2}$ The repayment phase is the period when student loans must be repaid; it generally begins 6 months after a student leaves an institution. Students who enter the repayment phase during a particular federal fiscal year (October 1 through September 30) make up the cohort for that fiscal year. For example, members of the fiscal year (FY) 2013 cohort entered the repayment phase any time from October 1, 2012, through September 30, 2013.
${ }^{3}$ Borrowers are considered to be in default if they make no payments for 360 days after missing a regularly scheduled payment. defaulting by the end of the second fiscal year that follows. For example, the 3 -year cohort default rate for FY 2010 is the percentage of borrowers who entered repayment during FY 2010 (any time from October 1, 2009, through September 30, 2010) and who defaulted by the end of FY 2012 (September 30, 2012). For purposes of computing default rates, if an indi-
vidual or entity affiliated with the institution makes a payment to prevent a borrower's default on a loan, the borrower is still considered in default.
NOTE: Data are for certain loans under the Federal Family Education Loan (FFEL) Program and the William D. Ford Federal Direct Loan Program (commonly referred to as the Direct Loan Program). Includes Federal Stafford Loans. Does not include
PLUS loans, Federal Insured Student Loans (FISLs), or Federal Perkins Loans. For more details, see https://ifap.ed.gov DefaultManagement/guide/attachments/CDRGuideCh2Pt1CDRCalculation.pdf. The default rates shown in this table for the DefaultManagement/guide/attachments/CDRGuideCh2Pt1CDRCalculation.pdf. The default rates shown in

## After deducting discounts and allowances

${ }^{2}$ Includes sales and services of educational activities.
${ }^{3}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statis-
tics, U.S. Department of Labor, adjusted to a school-year basis.
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Includes data for public institutions reporting data according to either the Governmental Accounting Standards Board (GASB) or the Financial Accounting Stan-
dards Board (FASB) questionnaire. Data in this table pertain to institutions' fiscal years that end in the academic year noted. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2008 through Spring 2015, Fall Enrollment component; and Spring 2009 through Spring 2016, Finance component. (This table was prepared December 2016.)

Table 333.20. Revenues of public degree-granting postsecondary institutions, by source of revenue and state or jurisdiction: 2014-15
[In thousands of current dollars]

${ }^{1}$ Includes other categories not separately shown.
${ }^{2}$ After deducting discounts and allowances
Includes sales and services of educational activities
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Includes data for public institutions reporting data according to either the Governmental Accounting Standards Board (GASB) or the Financial Accounting

Standards Board (FASB) questionnaire. Data in this table pertain to institutions' fiscal years that nd in the academic year noted. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2016, Finance component. (This table was prepared December 2016.

Table 333.30. Appropriations from state and local governments for public degree-granting postsecondary institutions, by state or jurisdiction:
Selected years, 1990-91 through 2014-15

NOTE: Data for 1990-91 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes more 2-year colleges and excludes a few higher education institutions that did not grant degrees. Includes data for public institutions reporting data according to either the Governmental Accounting Standards Board (GASB) or the Financial Accounting Standards Board
(FASB) questionnaire. Data in this table pertain to institutions' fiscal years that end in the academic year noted. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), "Finance Survey" (IPEDSF:FY91); and selected years, Spring 2002 through Spring 2016, Finance component. (This table was prepared December 2016.)

Table 333.40. Total revenue of private nonprofit degree-granting postsecondary institutions, by source of funds and level of institution: Selected years: 1999-2000 through 2014-15

[^124]Table 333．40．Total revenue of private nonprofit degree－granting postsecondary institutions，by source of funds and level of institution：Selected years：1999－2000 through 2014－15－Continued

## －Not available．

${ }^{1}$ Includes independent operations．
${ }^{2}$ Constant dollars based on the Consumer Price Index，prepared by the Bureau of Labor Statistics，U．S．Department of Labor，adjusted to a school－year basis．
NOTE：Degree－granting institutions grant associate＇s or higher degrees and participate in Title IV federal financial aid programs．Data in this table pertain to institutions＇fiscal years
that end in the academic year noted．Some data have been revised from previously pub－ lished figures．Detail may not sum to totals because of rounding．
SOURCE：U．S．Department of Education，National Center for Education Statistics，Inte－ grated Postsecondary Education Data System（IPEDS），＂Fall Enrollment Survey＂（IPEDS－ EF：99）；Spring 2001 through Spring 2007，Enrollment component；Spring 2008 through Spring 2015，Fall Enrollment component；and Spring 2001 through Spring 2016，Finance component．（This table was prepared December 2016．）

Table 333.50. Total revenue of private nonprofit degree-granting postsecondary institutions, by source of funds and classification of institution: 2014-15

## \#Rounds to zero.

${ }^{1}$ Includes independent operations.
${ }^{2}$ Research universities with a very high level of research activity
${ }^{3}$ Research universities with a high level of research activity.
${ }^{4}$ Institutions that award at least 20 doctor's degrees per year, but did not have high levels of research activity.
${ }^{5}$ Institutions that award at least 50 master's degrees per year
${ }^{6}$ Institutions that primarily emphasize undergraduate education. Also includes institutions classified as 4-year under the IPEDS system, which had been classified as baccalaureate/associate's colleges in the Carnegie classification system because they primarily award associate's degrees. ${ }^{7}$ Four-year institutions that award degrees primarily in single fields of study, such as medicine business, fine arts, theology, and engineering
${ }^{8}$ Tribally controlled colleges, which are located on reservations and are members of the American Indian Higher Education Consortium.
NOTE: Relative levels of research activity for research universities were determined by an analysis of research and development expenditures, science and engineering research staffing, and doctoral degrees conferred, by field. Further information on the Carnegie 2015 classification system used in this table may be obtained from http://carnegieclassifications.iu.edu/. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data in this table pertain to institutions' fiscal years that end in the academic year noted. Detail may not sum to totals because of rounding.

${ }^{1}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to a school-year basis.
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data in this table pertain to institutions' fiscal years that end in the academic year noted. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), "Fall Enrollment Survey" (IPEDS-EF:99); Spring 2009 through Spring 2015, Fall Enrollment component; and selected years, Spring 2001 through Spring 2016, Finance component. (This table was prepared December 2016.)

Table 333.70. Revenue received from the federal government by the 120 degree-granting postsecondary institutions receiving the largest amounts, by control and rank order: 2014-15

## Not applicable

A "1" indicates a public institution, and a " 2 " indicates a private nonprofit institution ${ }^{2}$ Includes federal appropriations; operating, nonoperating, unrestricted, and restricted fed eral contracts and grants; and revenue for independent operations. Independent operations generally include only the revenues associated with major federally funded research and development centers. Pell grants are included for public institutions and may also be included for private nonprofit institutions that do not treat Pell grants as pass-through trans
actions. Data for public, private nonprofit, and private for-profit institutions are only roughly comparable because they were collected using different survey instruments.
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs.

\#Rounds to zero
${ }^{1}$ Institutions ranked by size of endowment at end of 2016 fiscal year.
${ }^{2}$ Change in market value of endowment. Includes growth from gifts and returns on investments, as well as reductions from expenditures and withdrawals.

NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring Spring 2016, Finance component. (This table was prepared May 2017.)

Table 334.10. Expenditures of public degree-granting postsecondary institutions, by purpose of expenditure and level of institution: Selected years, 2007-08 through 2014-15

| Level of institution and year | Total expenditures | Instruction |  | Research | Public service | Academic support | Student services | Institutional support | Operation and maintenance of plant | Depreciation | Scholarships and fellowships ${ }^{2}$ | Auxiliary enterprises | Hospitals | Independent operations | Interest | Other |

## Includes other categories not separately shown.

Excludes discounts and allowances.
${ }^{3}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, djusted to a school-year basis.
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Includes data for public institutions reporting data according to either the Governmental Accounting Standards Board (GASB) or the Financial Accounting Standards Board (FASB) questionnaire. All expenditures reported by institutions for operation and maintenance

If plant have been aggregated in the operation and maintenance of plant category, even in cases where they originally were reported by purpose. Similarly, all expenditures reported by institutions for depreciation have been aggregated in the depreciation category, even in cases where they originally were reported by purpose. Data in this table pertain to institutions' fiscal years that end in the acaSOURCE: U.S. Department of Education, National Center for Education Stataistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2008 through Spring 2015, Fall Enrollment component; and Spring 2009 through Spring 2016, Finance component. (This table was prepared December 2016.)

${ }^{1}$ Includes other categories not separately shown.
${ }^{2}$ Excludes expenditures for operations and maintenance, interest, and depreciation, which are included in the total
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Includes data for public institutions reporting data according to either the Governmental Accounting Standards Board (GASB) or the Financial ously published figures. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Spring 2013 through Spring 2016, Finance component. (This table was prepared December 2016.)

Table 334.30. Total expenditures of private nonprofit degree-granting postsecondary institutions, by purpose and level of institution: Selected years, 1999-2000 through 2014-15

Essentially self-supporting operations of institutions that furnish a service to students, faculty, or staff, such as residence halls and food services.
${ }^{2}$ Excludes tuition, fee, and auxiliary enterprise allowances and agency transactions, such as student awards made from contributed funds or grant funds. These exclusions account for the majority of total student grants.
${ }^{3}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to a school-year basis.
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data in this table pertain to institutions' fiscal years
that end in the academic year noted. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), "Fall Enrollment Survey" (IPEDSEF:99); Spring 2001 through Spring 2007, Enrollment component; Spring 2008 through Spring 2015, Fall Enrollment component; and Spring 2001 through Spring 2016, Finance component. (This table was prepared December 2016.)

Table 334.40. Total expenditures of private nonprofit degree-granting postsecondary institutions, by purpose and classification of institution: 2014-15

## \#Rounds to zero.

${ }^{1}$ Essentially self-supporting operations of institutions that furnish a service to students, faculty, or staff, such as residence halls and food services.
${ }^{2}$ Excludes tuition, fee, and auxiliary enterprise allowances and agency transactions, such as student awards made from contributed funds or grant funds. These exclusions account for the majority of total student grants.
${ }^{3}$ Research universities with a very high level of research activity.
${ }^{4}$ Research universities with a high level of research activity.
${ }^{5}$ Institutions that award at least 20 doctor's degrees per year, but did not have high levels of research activity.
${ }^{6}$ Institutions that award at least 50 master's degrees per year.
${ }^{7}$ Institutions that primarily emphasize undergraduate education. Also includes institutions classified as 4-year under the IPEDS system, which had been classified as baccalaureate/associate's colleges in the Carnegie classification system because they primarily award associate's degrees.
${ }^{8}$ Four-year institutions that award degrees primarily in single fields of study, such as medicine, business, fine arts, theology, and engineering.
${ }^{9}$ Tribally controlled colleges, which are located on reservations and are members of the American Indian Higher Education Consortium.
NOTE: Relative levels of research activity for research universities were determined by an analysis of research and development expenditures, science and engineering research staffing, and doctoral degrees conferred, by field. Further information on the Carnegie 2015 classification system used in this table may be obtained from http://carnegieclassifications.iu.edu/. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data in this table pertain to institutions' fiscal years that end in the academic year noted. Detail may not sum to totals because of rounding.

${ }^{1}$ Essentially self-supporting operations of institutions that furnish a service to students, faculty, or staff, such as residence halls and food services.
${ }^{2}$ Excludes tuition, fee, and auxiliary enterprise allowances and agency transactions, such as student awards made from contributed funds or grant funds. These exclusions account for the majority of total student grants.
${ }^{3}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor, adjusted to a school-year basis.
NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. Data in this table pertain to institutions' fiscal years that end in
the academic year noted. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), "Fall Enrollment Survey" (IPEDS-EF:99); Spring 2001 through Spring 2007, Enrollment component; Spring 2008 through Spring 2015, Fall Enrollment component; and Spring 2001 through Spring 2016, Finance component. (This table was prepared December 2016.)

Table 334.70. Total expenditures of private nonprofit and for-profit degree-granting postsecondary institutions, by state or jurisdiction: Selected years, 1999-2000 through 2014-15
[In thousands of current dollars]

| State or jurisdiction | Nonprofit institutions |  |  |  |  |  | For-profit institutions |  |  |  |  |  |

NOTE: Degree-granting institutions grant associate's or higher degrees and participate in Title IV
federal financial aid programs. Data in this table pertain to institutions' fiscal years that end in the
academic year noted. Some data have been revised from previously published figures. Detail
may not sum to totals because of rounding.

## CHAPTER 4

Federal Funds for Education and Related Activities

This chapter provides information on federal support for education. The tables include detailed data on funding by specific federal agencies, funding for different levels of education and types of education-related activities, and funding for specific programs. Preceding the tables is a brief chronology of federal education legislation enacted since 1787, which provides historical context for the education funding data.

The data in this chapter primarily reflect outlays and appropriations of federal agencies. The data are compiled from budget information prepared by federal agencies. In contrast, most of the federal revenue data reported in other chapters are compiled by educational institutions or state education agencies and reported to the federal government through standardized survey forms. Tabulations based on institution- or state-reported revenue data differ substantially from federal budget reports because of numerous variations in methodology and definitions. Federal dollars are not necessarily spent by recipient institutions in the same year in which they are appropriated. In some cases, institutions cannot identify the source of federal revenues because they flow through state agencies. Some types of revenues, such as tuition and fees, are reported as revenues from students even though they may be supported by federal student aid programs. Some institutions that receive federal education funds (e.g., Department of Defense overseas and domestic schools, state education agencies, Head Start programs, and federal libraries) are not included in regular surveys, censuses, and administrative data collections conducted by the National Center for Education Statistics (NCES). Thus, the federal programs data tabulated in this chapter are not comparable with figures reported in other chapters. Readers should also be careful about comparing the data on obligations shown in table 402.10 with the data on outlays and appropriations appearing in other tables in this chapter.

## Federal Education Funding

Federal on-budget funding (federal appropriations) for education increased by 416 percent from fiscal year (FY) 1965 to FY 2015, after adjustment for inflation (table D, table 401.10, and figure 20). Federal on-budget funding for education in FY 1975 was 152 percent higher than in FY 1965. However, funding in FY 1985 was 16 percent lower than in FY 1975. Thereafter, federal on-budget funding for education generally increased. From FY 1990 to FY 2000, after adjustment for inflation, federal on-budget funding for education increased by 31 percent. From FY 2000 to FY 2015, it increased by 64 percent.

## Table D. Federal on-budget funding for education, by category: Selected fiscal years, 1965 through 2015 <br> [In billions of constant fiscal year (FY) 2016 dollars]

| Fiscal year | Total | Elementary/ secondary | Postsecondary | Other education | Research at educational institutions |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1965. | \$38.7 | \$14.1 | \$8.7 | \$2.7 | \$13.2 |
| 1975............ | 97.4 | 44.4 | 32.0 | 6.7 | 14.3 |
| 1980 ............ | 98.3 | 45.7 | 31.6 | 4.4 | 16.5 |
| 1985............ | 81.9 | 35.5 | 23.4 | 4.4 | 18.6 |
| 1990............ | 93.2 | 39.7 | 24.6 | 6.1 | 22.8 |

SOURCE: U.S. Department of Education, Budget Service and National Center for Education Statistics, unpublished tabulations. U.S. Office of Management and Budget, Budget of the U.S. Government, Appendix, various FYs. National Science Foundation, Federal Funds for Research and Development, various FYs.

Between FY 1990 and FY 2000, after adjustment for inflation, federal on-budget funding increased for three of the four major categories reported: elementary and secondary education (by 56 percent), other education (by 34 percent), and research at educational institutions (by 34 percent) (table D, table 401.10, and figure 20). However, funding for postsecondary education was 14 percent lower in FY 2000 than in FY 1990. From FY 2000 to FY 2015, after adjustment for inflation, federal on-budget funding showed a net increase of 260 percent for postsecondary education and 18 percent for other education. Federal on-budget funding for elementary and secondary education in FY 2015 was 30 percent higher than in FY 2000 while federal funding for research at educational institutions in FY 2015 was 8 percent higher than in FY 2000. In FY 2009, federal on-budget funding for elementary and secondary education was at a record-high level ( $\$ 194.6$ billion in FY 2016 dollars) due to funds from the American Recovery and Reinvestment Act of 2009 (ARRA) (table 401.10). ${ }^{1}$ For FY 2016, federal program funds totaled $\$ 82.1$ billion for elementary and secondary education, $\$ 63.3$ billion for postsecondary education, $\$ 9.0$ billion for other education programs, and an estimated $\$ 34.5$ billion for research at educational institutions (tables 401.10 and 401.30).

[^127]After adjustment for inflation, off-budget support (federal support for education not tied to appropriations) and nonfederal funds generated by federal legislation (e.g., private loans, grants, and aid) showed an increase of 136 percent between FY 1990 ( $\$ 20.2$ billion in FY 2016 dollars) and FY 2000 ( $\$ 47.6$ billion in FY 2016 dollars) (table 401.10). In FY 2015, these same funds totaled $\$ 97.8$ billion in FY 2016 dollars, an increase of 106 percent over FY 2000. In FY 2016, these funds totaled $\$ 95.8$ billion.

In FY 2015, federal on-budget funds for education totaled $\$ 195.8$ billion in current dollars (figure 21 and table 401.20). The U.S. Department of Education provided 51 percent ( $\$ 100.4$ billion) of this total. Funds exceeding $\$ 3$ billion also came from the U.S. Department of Health and Human Services ( $\$ 27.2$ billion), the U.S. Department of Agriculture ( $\$ 23.9$ billion), the U.S. Department of Veterans Affairs ( $\$ 13.6$ billion), the U.S. Department of Defense ( $\$ 7.0$ billion), the National Science Foundation ( $\$ 5.8$ billion), the U.S. Department of Labor ( $\$ 4.8$ billion), and the U.S. Department of Energy ( $\$ 3.5$ billion).

## Chronology of Federal Education Legislation

A capsule view of the history of federal education activities is provided in the following list of selected legislation:

1787 Northwest Ordinance authorized land grants for the establishment of educational institutions.

1802 An Act Fixing the Military Peace Establishment of the United States established the U.S. Military Academy. (The U.S. Naval Academy was established in 1845 by the Secretary of the Navy.)
1862 First Morrill Act authorized public land grants to the states for the establishment and maintenance of agricultural and mechanical colleges.
1867 Department of Education Act authorized the establishment of the U.S. Department of Education. ${ }^{2}$

1876 Appropriation Act, U.S. Department of the Treasury, established the U.S. Coast Guard Academy.
1890 Second Morrill Act provided for monetary grants for support of instruction in the agricultural and mechanical colleges.

1911 State Marine School Act authorized federal funds to be used for the benefit of any nautical school in any of 11 specified seaport cities.
1917 Smith-Hughes Act provided for grants to states for support of vocational education.
${ }^{2}$ The U.S. Department of Education as established in 1867 was later known as the Office of Education. In 1980, under Public Law 96-88, it became a cabinet-level department. Therefore, for purposes of consistency, it is referred to as the "U.S. Department of Education" even in those tables covering years when it was officially the Office of Education.

1918 Vocational Rehabilitation Act provided for grants for rehabilitation through training of World War I veterans.

1920 Smith-Bankhead Act authorized grants to states for vocational rehabilitation programs.
1935 Bankhead-Jones Act (Public Law 74-182) authorized grants to states for agricultural experiment stations.

Agricultural Adjustment Act (Public Law 74-320) authorized 30 percent of the annual customs receipts to be used to encourage the exportation and domestic consumption of agricultural commodities. Commodities purchased under this authorization began to be used in school lunch programs in 1936. The National School Lunch Act of 1946 continued and expanded this assistance.

1936 An Act to Further the Development and Maintenance of an Adequate and Well-Balanced American Merchant Marine (Public Law 74-415) established the U.S. Merchant Marine Academy.

1937 National Cancer Institute Act (Public Law 75-244) established the Public Health Service fellowship program.

1941 Amendment to Lanham Act of 1940 authorized federal aid for construction, maintenance, and operation of schools in federally impacted areas. Such assistance was continued under Public Law 815 and Public Law 874, 81st Congress, in 1950.
1943 Vocational Rehabilitation Act (Public Law 78-16) provided assistance to veterans with disabilities.

School Lunch Indemnity Plan (Public Law 78-129) provided funds for local lunch food purchases.
1944 Servicemen's Readjustment Act (Public Law 78-346), known as the GI Bill, provided assistance for the education of veterans.

Surplus Property Act (Public Law 78-457) authorized transfer of surplus property to educational institutions.
1946 National School Lunch Act (Public Law 79-396) authorized assistance through grants-in-aid and other means to states to assist in providing adequate foods and facilities for the establishment, maintenance, operation, and expansion of nonprofit school lunch programs.
George-Barden Act (Public Law 80-402) expanded federal support of vocational education.

1948 United States Information and Educational Exchange Act (Public Law 80-402) provided for the interchange of people, knowledge, and skills between the United States and other countries.

1949 Federal Property and Administrative Services Act (Public Law 81-152) provided for donation of surplus property to educational institutions and for other public purposes.

1950 Financial Assistance for Local Educational Agencies Affected by Federal Activities (Public Law 81-815 and Public Law 81-874) provided assistance for construction (Public Law 815) and operation (Public Law 874) of schools in federally affected areas.
Housing Act (Public Law 81-475) authorized loans for construction of college housing facilities.
1954 An Act for the Establishment of the United States Air Force Academy and Other Purposes (Public Law 83325) established the U.S. Air Force Academy.

Educational Research Act (Public Law 83-531) authorized cooperative arrangements with universities, colleges, and state educational agencies for educational research.
School Milk Program Act (Public Law 83-597) provided funds for purchase of milk for school lunch programs.
1956 Library Services Act (Public Law 84-597) provided grants to states for extension and improvement of rural public library services.
1957 Practical Nurse Training Act (Public Law 84-911) provided grants to states for practical nurse training.
1958 National Defense Education Act (Public Law 85-864) provided assistance to state and local school systems for instruction in science, mathematics, modern foreign languages, and other critical subjects; state statistical services; guidance, counseling, and testing services and training institutes; higher education student loans and fellowships as well as foreign language study and training; experimentation and dissemination of information on more effective use of television, motion pictures, and related media for educational purposes; and vocational education for technical occupations necessary to the national defense.
Education of Mentally Retarded Children Act (Public Law 85-926) authorized federal assistance for training teachers of the disabled.
Captioned Films for the Deaf Act (Public Law 85905) authorized a loan service of captioned films for the deaf.
1961 Area Redevelopment Act (Public Law 87-27) included provisions for training or retraining of people in redevelopment areas.
1962 Manpower Development and Training Act (Public Law 87-415) provided training in new and improved skills for the unemployed and underemployed.
Migration and Refugee Assistance Act of 1962 (Public Law 87-510) authorized loans, advances, and grants for education and training of refugees.
1963 Health Professions Educational Assistance Act of 1963 (Public Law 88-129) provided funds to expand teaching facilities and for loans to students in the health professions.

Vocational Education Act of 1963 (Public Law 88210, Part A) increased federal support of vocational education schools; vocational work-study programs; and research, training, and demonstrations in vocational education.
Higher Education Facilities Act of 1963 (Public Law 88-204) authorized grants and loans for classrooms, libraries, and laboratories in public community colleges and technical institutes, as well as undergraduate and graduate facilities in other higher education institutions.

1964 Civil Rights Act of 1964 (Public Law 88-352) authorized the Commissioner of Education to arrange for support for higher education institutions and school districts to provide inservice programs for assisting instructional staff in dealing with problems caused by desegregation.
Economic Opportunity Act of 1964 (Public Law 88452) authorized grants for college work-study programs for students from low-income families; established a Job Corps program and authorized support for work-training programs to provide education and vocational training and work experience opportunities in welfare programs; authorized support of education and training activities and of community action programs, including Head Start, Follow Through, and Upward Bound; and authorized the establishment of Volunteers in Service to America (VISTA).
1965 Elementary and Secondary Education Act of 1965 (Public Law 89-10) authorized grants for elementary and secondary school programs for children of lowincome families; school library resources, textbooks, and other instructional materials for school children; supplementary educational centers and services; strengthening state education agencies; and educational research and research training.
Health Professions Educational Assistance Amendments of 1965 (Public Law 89-290) authorized scholarships to aid needy students in the health professions.
Higher Education Act of 1965 (Public Law 89-329) provided grants for university community service programs, college library assistance, library training and research, strengthening developing institutions, teacher training programs, and undergraduate instructional equipment. Authorized insured student loans, established a National Teacher Corps, and provided for graduate teacher training fellowships.
National Foundation on the Arts and the Humanities Act (Public Law 89-209) authorized grants and loans for projects in the creative and performing arts and for research, training, and scholarly publications in the humanities.

National Technical Institute for the Deaf Act (Public Law 89-36) provided for the establishment, construction, equipping, and operation of a residential school for postsecondary education and technical training of the deaf.

School Assistance in Disaster Areas Act (Public Law 89-313) provided for assistance to local education agencies to help meet exceptional costs resulting from a major disaster.
1966 International Education Act (Public Law 89-698) provided grants to higher education institutions for the establishment, strengthening, and operation of centers for research and training in international studies and the international aspects of other fields of study.
National Sea Grant College and Program Act (Public Law 89-688) authorized the establishment and operation of Sea Grant Colleges and programs by initiating and supporting programs of education and research in the various fields relating to the development of marine resources.

Adult Education Act (Public Law 89-750) authorized grants to states for the encouragement and expansion of educational programs for adults, including training of teachers of adults and demonstrations in adult education (previously part of Economic Opportunity Act of 1964).

Model Secondary School for the Deaf Act (Public Law 89-694) authorized the establishment and operation, by Gallaudet College, of a model secondary school for the deaf.

1967 Education Professions Development Act (Public Law 90-35) amended the Higher Education Act of 1965 for the purpose of improving the quality of teaching and to help meet critical shortages of adequately trained educational personnel.

Public Broadcasting Act of 1967 (Public Law 90-129) established a Corporation for Public Broadcasting to assume major responsibility in channeling federal funds to noncommercial radio and television stations, program production groups, and educational television networks; conduct research, demonstration, or training in matters related to noncommercial broadcasting; and award grants for construction of educational radio and television facilities.

1968 Elementary and Secondary Education Amendments of 1968 (Public Law 90-247) modified existing programs and authorized support of regional centers for education of children with disabilities, model centers and services for deaf-blind children, recruitment of personnel and dissemination of information on education of children with disabilities; technical assistance in education to rural areas; support of dropout prevention projects; and support of bilingual education programs.

Handicapped Children's Early Education Assistance Act (Public Law 90-538) authorized preschool and early education programs for children with disabilities.

Vocational Education Amendments of 1968 (Public Law 90-576) modified existing programs and provided for a National Advisory Council on Vocational Education and collection and dissemination of information for programs administered by the Commissioner of Education.

1970 Elementary and Secondary Education Assistance Programs, Extension (Public Law 91-230) authorized comprehensive planning and evaluation grants to state and local education agencies; provided for the establishment of a National Commission on School Finance.
National Commission on Libraries and Information Science Act (Public Law 91-345) established a National Commission on Libraries and Information Science to effectively utilize the nation's educational resources.
Office of Education Appropriation Act (Public Law 91-380) provided emergency school assistance to desegregating local education agencies.
Environmental Education Act (Public Law 91-516) established an Office of Environmental Education to develop curriculum and initiate and maintain environmental education programs at the elementary/secondary levels; disseminate information; provide training programs for teachers and other educational, public, community, labor, and industrial leaders and employees; provide community education programs; and distribute material dealing with the environment and ecology.

Drug Abuse Education Act of 1970 (Public Law 91527) provided for development, demonstration, and evaluation of curricula on the problems of drug abuse.
1971 Comprehensive Health Manpower Training Act of 1971 (Public Law 92-257) amended Title VII of the Public Health Service Act, increasing and expanding provisions for health manpower training and training facilities.

1972 Drug Abuse Office and Treatment Act of 1972 (Public Law 92-255) established a Special Action Office for Drug Abuse Prevention to provide overall planning and policy for all federal drug-abuse prevention functions; a National Advisory Council for Drug Abuse Prevention; community assistance grants for community mental health centers for treatment and rehabilitation of people with drug-abuse problems; and, in December 1974, a National Institute on Drug Abuse.

Education Amendments of 1972 (Public Law 92-318) established the Education Division in the U.S. Department of Health, Education, and Welfare and the National Institute of Education; general aid for higher education institutions; federal matching grants for state Student Incentive Grants; a National Commis-
sion on Financing Postsecondary Education; State Advisory Councils on Community Colleges; a Bureau of Occupational and Adult Education and State Grants for the design, establishment, and conduct of postsecondary occupational education; and a bureau-level Office of Indian Education. Amended current U.S. Department of Education programs to increase their effectiveness and better meet special needs. Prohibited sex bias in admission to vocational, professional, and graduate schools, and public institutions of undergraduate higher education.
1973 Older Americans Comprehensive Services Amendment of 1973 (Public Law 93-29) made available to older citizens comprehensive programs of health, education, and social services.

Comprehensive Employment and Training Act of 1973 (Public Law 93-203) provided for employment and training opportunities for unemployed and underemployed people. Extended and expanded provisions in the Manpower Development and Training Act of 1962, Title I of the Economic Opportunity Act of 1962, Title I of the Economic Opportunity Act of 1964, and the Emergency Employment Act of 1971 as in effect prior to June 30, 1973.

1974 Education Amendments of 1974 (Public Law 93-380) provided for the consolidation of certain programs and established a National Center for Education Statistics.
Juvenile Justice and Delinquency Prevention Act of 1974 (Public Law 93-415) provided for technical assistance, staff training, centralized research, and resources to develop and implement programs to keep students in elementary and secondary schools; and established, in the U.S. Department of Justice, a National Institute for Juvenile Justice and Delinquency Prevention.
1975 Indian Self-Determination and Education Assistance Act (Public Law 93-638) provided for increased participation of American Indians/Alaska Natives in the establishment and conduct of their education programs and services.

Harry S Truman Memorial Scholarship Act (Public Law 93-642) established the Harry S Truman Scholarship Foundation and created a perpetual education scholarship fund for young Americans to prepare for and pursue careers in public service.
Education for All Handicapped Children Act (Public Law 94-142) provided that all children with disabilities have available to them a free appropriate education designed to meet their unique needs.
1976 Educational Broadcasting Facilities and Telecommunications Demonstration Act of 1976 (Public Law 94309) established a telecommunications demonstration program to promote the development of nonbroadcast telecommunications facilities and services for the
transmission, distribution, and delivery of health, education, and public or social service information.
1977 Youth Employment and Demonstration Projects Act of 1977 (Public Law 95-93) established a youth employment training program including, among other activities, promotion of education-to-work transition, literacy training and bilingual training, and attainment of certificates of high school equivalency.
Career Education Incentive Act (Public Law 95-207) authorized the establishment of a career education program for elementary and secondary schools.
1978 Tribally Controlled Community College Assistance Act of 1978 (Public Law 95-471) provided federal funds for the operation and improvement of tribally controlled community colleges for American Indian/ Alaska Native students.

Middle Income Student Assistance Act (Public Law 95-566) modified the provisions for student financial assistance programs to allow middle-income as well as low-income students attending college or other postsecondary institutions to qualify for federal education assistance.
1979 Department of Education Organization Act (Public Law 96-88) established a U.S. Department of Education containing functions from the Education Division of the U.S. Department of Health, Education, and Welfare (HEW) along with other selected education programs from HEW, the U.S. Department of Justice, U.S. Department of Labor, and the National Science Foundation.
1980 Asbestos School Hazard Detection and Control Act of 1980 (Public Law 96-270) established a program for inspection of schools for detection of hazardous asbestos materials and provided loans to assist educational agencies to contain or remove and replace such materials.
1981 Education Consolidation and Improvement Act of 1981 (Part of Public Law 97-35) consolidated 42 programs into 7 programs to be funded under the elementary and secondary block grant authority.
1983 Student Loan Consolidation and Technical Amendments Act of 1983 (Public Law 98-79) established an 8 percent interest rate for Guaranteed Student Loans and an extended Family Contribution Schedule.
Challenge Grant Amendments of 1983 (Public Law 98-95) amended Title III of the Higher Education Act of 1965, and added authorization of the Challenge Grant program. The Challenge Grant program provides funds to eligible institutions on a matching basis as an incentive to seek alternative sources of funding.

Education of the Handicapped Act Amendments of 1983 (Public Law 98-199) added the Architectural Barrier amendment (providing funds for altering existing buildings and equipment to make them accessible to those with physical disabilities) and clarified participation of children with disabilities in private schools.
1984 Education for Economic Security Act (Public Law 98377) added new science and mathematics programs for elementary, secondary, and postsecondary education. The new programs included magnet schools, excellence in education, and equal access.
Carl D. Perkins Vocational Education Act (Public Law 98-524) continued federal assistance for vocational education through FY 1989. The act replaced the Vocational Education Act of 1963. It provided aid to the states to make vocational education programs accessible to all people, including disabled and disadvantaged, single parents and homemakers, and the incarcerated.

Human Services Reauthorization Act (Public Law 98558) created a Carl D. Perkins scholarship program, a National Talented Teachers Fellowship program, a Federal Merit Scholarships program, and a Leadership in Educational Administration program.
1985 Montgomery GI Bill-Active Duty (Public Law 98525), brought about a new GI Bill for individuals who initially entered active military duty on or after July 1, 1985.

Montgomery GI Bill-Selected Reserve (Public Law 98-525), established an education program for members of the Selected Reserve (which includes the National Guard) who enlist, reenlist, or extend an enlistment after June 30, 1985, for a 6-year period.
1986 Handicapped Children's Protection Act of 1986 (Public Law 99-372) allowed parents of children with disabilities to collect attorneys' fees in cases brought under the Education of the Handicapped Act and provided that the Education of the Handicapped Act does not preempt other laws, such as Section 504 of the Rehabilitation Act.
Drug-Free Schools and Communities Act of 1986 (Part of Public Law 99-570) established programs for drug abuse education and prevention, coordinated with related community efforts and resources, through the use of federal financial assistance.
1988 Augustus F. Hawkins-Robert T. Stafford Elementary and Secondary School Improvement Amendments of 1988 (Public Law 100-297) reauthorized through 1993 major elementary and secondary education programs, including Chapter 1, Chapter 2, Bilingual Education, Math-Science Education, Magnet Schools, Impact Aid, Indian Education, Adult Education, and other smaller education programs.

Stewart B. McKinney Homeless Assistance Amendments Act of 1988 (Public Law 100-628) extended for 2 additional years programs providing assistance to the homeless, including literacy training for homeless adults and education for homeless youths.

Tax Reform Technical Amendments (Public Law 100647) authorized an Education Savings Bond for the purpose of postsecondary educational expenses. The bill grants tax exclusion for interest earned on regular series EE savings bonds.

1989 Childhood Education and Development Act of 1989 (Part of Public Law 101-239) authorized the appropriations to expand Head Start programs and programs carried out under the Elementary and Secondary Education Act of 1965 to include child care services.
1990 Excellence in Mathematics, Science and Engineering Education Act of 1990 (Public Law 101-589) created a national mathematics and science clearinghouse and created several other mathematics, science, and engineering education programs.
Student Right-To-Know and Campus Security Act (Public Law 101-542) required higher education institutions receiving federal financial assistance to provide certain information about graduation rates of studentathletes and about campus crime statistics and security policies. (The 1990 campus crime and security legislation, along with later acts that amended it, is generally referred to as "the Clery Act.")
Americans with Disabilities Act of 1990 (Public Law 101-336) prohibited discrimination against people with disabilities.
National and Community Service Act of 1990 (Public Law 101-610) increased school and college-based community service opportunities and authorized the President's Points of Light Foundation.
1991 National Literacy Act of 1991 (Public Law 102-73) established the National Institute for Literacy, the National Institute Board, and the Interagency Task Force on Literacy. Amended various federal laws to establish and extend various literacy programs.
High-Performance Computing Act of 1991 (Public Law 102-194) directed the President to implement a National High-Performance Computing Program. Provided for (1) establishment of a National Research and Education Network; (2) standards and guidelines for high-performance networks; and (3) the responsibility of certain federal departments and agencies with regard to the Network.
Veterans' Educational Assistance Amendments of 1991 (Public Law 102-127) restored certain educational benefits available to reserve and active-duty personnel under the Montgomery GI Bill to students whose courses of studies were interrupted by the Persian Gulf War.

Civil Rights Act of 1991 (Public Law 102-166) amended the Civil Rights Act of 1964, the Age Discrimination in Employment Act of 1967, and the Americans with Disabilities Act of 1990, with regard to employment discrimination. Established the Technical Assistance Training Institute.

1992 Ready-To-Learn Act (Public Law 102-545) amended the General Education Provisions Act to establish Ready-To-Learn Television programs to support educational programming and related materials for preschool and elementary school children and their parents, child care providers, and educators.
1993 Student Loan Reform Act (Public Law 103-66) reformed the student aid process by phasing in a system of direct lending designed to provide savings for taxpayers and students. Allows students to choose among a variety of repayment options, including income contingency.
National Service Trust Act (Public Law 103-82) amended the National and Community Service Act of 1990 to establish a Corporation for National Service. In addition, provided education grants up to $\$ 4,725$ per year for 2 years to people age 17 or older who perform community service before, during, or after postsecondary education.

1994 Goals 2000: Educate America Act (Public Law 103227) established a new federal partnership through a system of grants to states and local communities to reform the nation's education system. The Act formalized the national education goals and established the National Education Goals Panel.

School-to-Work Opportunities Act of 1994 (Public Law 103-239) established a national framework within which states and communities can develop School-to-Work Opportunities systems to prepare young people for first jobs and continuing education. The Act also provided money to states and communities to develop a system of programs that include work-based learning, school-based learning, and connecting activities components.
Safe Schools Act of 1994 (Part of Public Law 103-227) authorized the award of competitive grants to local educational agencies with serious crime to implement violence prevention activities such as conflict resolution and peer mediation.

1996 Contract With America: Unfunded Mandates (Public Law 104-4) ended the imposition, in the absence of full consideration by Congress, of federal mandates on state, local, and tribal governments without adequate funding, in a manner that may displace other essential governmental priorities; and ensured that the federal government pays the costs incurred by those governments in complying with certain requirements under federal statutes and regulations.

1997 The Taxpayer Relief Act of 1997 (Public Law 105-34) enacted the Hope Scholarship and Life-Long Learning Tax Credit provisions into law.
Emergency Student Loan Consolidation Act of 1997 (Public Law 105-78) amended the Higher Education Act of 1965 to provide for improved student loan consolidation services.

1998 Workforce Investment Act of 1998 (Public Law 105220) enacted the Adult Education and Family Literacy Act, and substantially revised and extended, through FY 2003, the Rehabilitation Act of 1973.
Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act (Public Law 105244) expanded crime categories that must be reported by postsecondary institutions.
Omnibus Consolidated and Emergency Supplemental Appropriations Act, 1999 (Public Law 105-277) enacted the Reading Excellence Act, to promote the ability of children to read independently by the third grade; and earmarked funds to help states and school districts reduce class sizes in the early grades.
Charter School Expansion Act (Public Law 105-278) amended the charter school program, enacted in 1994 as Title X, Part C of the Elementary and Secondary Education Act of 1965.

Carl D. Perkins Vocational and Applied Technology Education Amendments of 1998 (Public Law 105332) revised, in its entirety, the Carl D. Perkins Vocational and Applied Technology Education Act, and reauthorized the Act through FY 2003.
Assistive Technology Act of 1998 (Public Law 105394) replaced the Technology-Related Assistance for Individuals with Disabilities Act of 1988 with a new Act, authorized through FY 2004, to address the assistive-technology needs of individuals with disabilities.

1999 Education Flexibility Partnership Act of 1999 (Public Law 106-25) authorized the Secretary of Education to allow all states to participate in the Education Flexibility Partnership program.
District of Columbia College Access Act of 1999 (Public Law 106-98) established a program to afford high school graduates from the District of Columbia the benefits of in-state tuition at state colleges and universities outside the District of Columbia.
2000 The National Defense Authorization Act for Fiscal Year 2001 (Public Law 106-398) included, as Title XVIII, the Impact Aid Reauthorization Act of 2000, which extended the Impact Aid programs through FY 2003.
College Scholarship Fraud Prevention Act of 2000 (Public Law 106-420) enhanced federal penalties for offenses involving scholarship fraud; required an annual scholarship fraud report by the Attorney

General, the Secretary of Education, and the Federal Trade Commission (FTC); and required the Secretary of Education, in conjunction with the FTC, to maintain a scholarship fraud awareness website.
Consolidated Appropriations Act 2001 (Public Law 106-554) created a new program of assistance for school repair and renovation, and amended the Elementary and Secondary Education Act of 1965 to authorize credit enhancement initiatives to help charter schools obtain, construct, or repair facilities; reauthorized the Even Start program; and enacted the Children's Internet Protection Act.

2001 50th Anniversary of Brown v. the Board of Education (Public Law 107-41) established a commission for the purpose of encouraging and providing for the commemoration of the 50th anniversary of the 1954 Supreme Court decision Brown v. Board of Education.
2002 No Child Left Behind Act of 2001 (Public Law 107110) provided for the comprehensive reauthorization of the Elementary and Secondary Education Act of 1965, incorporating specific proposals in such areas as testing, accountability, parental choice, and early reading.
Education Sciences Reform Act (Public Law 107-279) established the Institute of Education Sciences within the U.S. Department of Education to carry out a coordinated, focused agenda of high-quality research, statistics, and evaluation that is relevant to the educational challenges of the nation.
The Higher Education Relief Opportunities for Students Act of 2001 (Public Law 107-122) provided the Secretary of Education with waiver authority over student financial aid programs under Title IV of the Higher Education Act of 1965, to deal with student and family situations resulting from the September 11, 2001, terrorist attacks.

Public Law 107-139 amended Title IV of the Higher Education Act to establish fixed interest rates for student and parent borrowers.
2003 The Higher Education Relief Opportunities for Students Act of 2003 (Public Law 108-76) provided the Secretary of Education with waiver authority over student financial aid programs under Title IV of the Higher Education Act of 1965, to deal with student and family situations resulting from wars or national emergencies.
2004 Assistive Technology Act of 2004 (Public Law 108364) reauthorized the Assistive Technology program, administered by the Department of Education.
Taxpayer-Teacher Protection Act of 2004 (Public Law 108-409) temporarily stopped excessive special allowance payments to certain lenders under the Federal Family Education Loan (FFEL) Program and increased the amount of loans that can be forgiven
for certain borrowers who are highly qualified mathematics, science, and special education teachers who serve in high-poverty schools for 5 years.

Individuals with Disabilities Education Improvement Act of 2004 (Public Law 108-446) provided a comprehensive reauthorization of the Individuals with Disabilities Education Act.

2005 Student Grant Hurricane and Disaster Relief Act (Public Law 109-67) authorized the Secretary of Education to waive certain repayment requirements for students receiving campus-based federal grant assistance if they were residing in, employed in, or attending an institution of higher education located in a major disaster area, or their attendance was interrupted because of the disaster.
Natural Disaster Student Aid Fairness Act (Public Law 109-86) authorized the Secretary of Education during FY 2006 to reallocate campus-based student aid funds to institutions of higher learning in Louisiana, Mississippi, Alabama, and Texas, or institutions that had accepted students displaced by Hurricane Katrina or Rita. The law also waived requirements for matching funds that are normally imposed on institutions and students.
Hurricane Education Recovery Act (Public Law 109148, provision in the Defense Department Appropriations Act for FY 2006) provided funds for states affected by Hurricane Katrina to restart school operations, provide temporary emergency aid for displaced students, and assist homeless youth. The law also permitted the Secretary of Education to extend deadlines under the Individuals with Disabilities Education Act for those affected by Katrina or Rita.
2006 Higher Education Reconciliation Act of 2005 (Public Law 109-171) made various amendments to programs of student financial assistance under Title IV of the Higher Education Act of 1965.

Public Law 109-211 reauthorized the "ED-FLEX" program (under the Education Flexibility Partnership Act of 1999), under which the Secretary of Education permits states to waive certain requirements of federal statutes and regulations if they meet certain conditions.

Carl D. Perkins Career and Technical Education Improvement Act of 2006 (Public Law 109-270) reauthorized the vocational and technical education programs under the Perkins Act through 2012.
2007 America COMPETES Act (or "America Creating Opportunities to Meaningfully Promote Excellence in Technology, Education, and Science Act") (Public Law 110-69) created new STEM (science, technology, engineering, and mathematics) education programs in various agencies, including the Department of Education.

College Cost Reduction and Access Act of 2007 (Public Law 110-84) reduced interest rates on student loans and made other amendments to the Higher Education Act of 1965 to make college more accessible and affordable.

Public Law 110-93 made permanent the waiver authority of the Secretary of Education with respect to student financial assistance during a war or other military operation or national emergency.
2008 Ensuring Continued Access to Student Loans Act of 2008 (Public Law 110-227) provided various authorities to the Department of Education, among other provisions, to help ensure that college students and their parents continue to have access to loans in the tight credit market.

Higher Education Opportunity Act (Public Law 110315) provided a comprehensive reauthorization of the Higher Education Act of 1965.
2009 American Recovery and Reinvestment Act of 2009 (Public Law 111-5) provided about $\$ 100$ billion to state education systems and supplemental appropriations for several Department of Education programs.

Public Law 111-39 made miscellaneous and technical amendments to the Higher Education Act of 1965.
2010 Health Care and Education Reconciliation Act of 2010 (Public Law 111-152) included, as Title II, the "SAFRA Act" (also known as the "Student Aid and Fiscal Responsibility Act"). The SAFRA Act ended the federal government's role in subsidizing financial institutions that make student loans through the Federal Family Education Loan (FFEL) Program under Part B of Title IV of the Higher Education Act of 1965 (HEA), and correspondingly expanded the Federal Direct Student Loan Program administered by the Department of Education under Part D of Title IV of the HEA.
Public Law 111-226 provided an additional $\$ 10$ billion to states and school districts, through an "Education Jobs Fund" modeled closely on the State Fiscal Stabilization Fund created by the 2009 Recovery Act, to hire (or avoid laying off) teachers and other educators.
2013 The Bipartisan Student Loan Certainty Act of 2013 (Public Law 113-28) amended the Higher Education Act of 1965 (HEA) to govern the interest rates on the various categories of student loans under Title IV of the HEA.

Violence Against Women Reauthorization Act of 2013 (Public Law 113-4) amended the Clery Act, increasing the responsibility of postsecondary institutions to prevent, address, and report crimes on campus.
2014 Workforce Innovation and Opportunity Act (Public Law 113-128) amended the Workforce Investment Act of 1998 to strengthen the U.S. workforce development system through innovation in, and alignment and improvement of, employment, training, and education programs in the United States, and to promote individual and national economic growth, and for other purposes.
Public Law 113-174 extended the National Advisory Committee on Institutional Quality and Integrity and the Advisory Committee on Student Financial Assistance for 1 year.
2015 Need-Based Educational Aid Act of 2015 (Public Law 114-44) amended the Improving America's Schools Act of 1994 to extend through FY 2022 the antitrust exemption that allows higher education institutions that admit all students on a need-blind basis to enter or attempt to enter into agreements among themselves regarding the administration of need-based financial aid.
STEM Education Act of 2015 (Public Law 114-59) defined STEM education to include computer science, and provided for continued support for existing STEM education programs at the National Science Foundation.
Every Student Succeeds Act (Public Law 114-95) reauthorized and amended the Elementary and Secondary Education Act of 1965, incorporating provisions to expand state responsibility over schools, provide grants to charter schools, and reduce the federal testbased accountability system of the No Child Left Behind Act.
Federal Perkins Loan Program Extension Act of 2015 (Public Law 114-105) temporarily extended the Federal Perkins Loan program, allowing continued disbursement of loans to current undergraduate borrowers through September 30, 2017.
2016 National Defense Authorization Act for Fiscal Year 2017 (Public Law 114-328) authorizes appropriations to continue assistance to local educational agencies that benefit dependents of members of the Armed Forces and Department of Defense civilian employees, including assistance to schools with significant numbers of military dependents as well as impact aid for children with severe disabilities.

Figure 20. Federal on-budget funds for education, by level or other educational purpose: Selected years, 1965 through 2016 Billions of constant fiscal year 2016 dollars

[^128]Figure 21. Percentage distribution of federal on-budget funds for education, by agency: Fiscal year 2015

## Agency

${ }^{1}$ In addition to the nine agencies shown in this figure, other agencies provide smaller amounts of funding for education.
NOTE: On-budget funds are tied to federal appropriations for education programs. Graphic display was generated using unrounded data. Detail may not sum to totals because of rounding. $\dagger$ Not applicable．
Cal－budget support includes federal funds for education programs tied to appropriations．Excludes federal support for medi－ cal education benefits under Medicare in the U．S．Department of Health and Human Services．Benefits are excluded because data before fiscal year（FY） 1990 are not available．This program existed since Medicare began，but was not available as a
separate budget item until FY 1990 ．Excluded amounts range from an estimated $\$ 4,440,000,000$ in FY 1990 to an estimated $\$ 12,100,000,000$ in FY 2016.
${ }^{2}$ Losses of tax revenue attributable to provisions of the federal income tax laws that allow a special exclusion，exemption，or deduction from gross income or provide a special credit，preferential rate of tax，or a deferral of tax liability affecting individual or corporate income tax liabilities．
${ }^{4}$ The William D．Ford Federal Direct Loan Program（commonly referred to as the Direct Loan Program）provides students with the same benefits they were eligible to receive under the Federal Family Education Loan（FFEL）Program，but provides loans to students through federal capital rather than through private lenders．
${ }^{5}$ The Federal Family Education Loan（FFEL）Program，formerly known as the Guaranteed Student Loan Program，provided student loans guaranteed by the federal government and disbursed to borrowers．After June 30，2010，no new FFEL loans have been originated；all new loans are originated through the Direct Loan Program
${ }^{6}$ Student loans created from institutional matching funds（since 1993 one－third of federal capital contributions）．Excludes ${ }^{7}$ Student loans created from institutional matching funds（one－ninth of federal contributions）．This was a demonstration project that involved only 10 institutions and had unsubsidized interest rates．Program repealed in fiscal year 1992.
${ }^{8}$ Formerly the State Student Incentive Grant Program．Starting in fiscal year 2000，amounts under $\$ 30.0$ million have required dollar－for－dollar state matching contributions，while amounts over $\$ 30.0$ million have required two－to－one state matching contributions．
Institutions award grants to undergraduate students，and the federal share of such grants may not exceed 75 percent of the total grant．
${ }^{10} E$ Employer contributions to student earnings are generally one－third of federal allocation．
${ }^{12}$ All increase in postsecondary expenditures in 2006 resulted primarily from an accounting adjustment．
${ }^{12}$ All education funds from the American Recovery and Reinvestment Act of 2009 （ARRA）are included in the FY 2009 row of this table．Most of these funds had a 2 －year availability，meaning that they were available for the Department of Education to ${ }^{13}$ Estimated．
${ }^{14}$ Data adjusted by the federal budget composite deflator，as reported in the U．S．Office of Management and Budget＇s Budget of the U．S．Government，Historical Tables，Fiscal Year 2017.
NOTE：To the extent possible，federal education funds data do not represent obligations，but instead represent appropriations or（especially for earlier years）outlays．Negative amounts occur when program receipts exceed outlays．Some data have been revised from previously published figures．Detail may not sum to totals because of rounding．

## Not applicable.

Excludes federal support for medical education benefits under Medicare in the U.S. Department of Health and Human Services. Benefits are excluded because data before fiscal year ( FY ) 1990 are not available. This program existed since Medicare began, but was not available as a separate budget item until FY 1990. Excluded amounts are estimated as follows: $\$ 4,440,000,000$ in $F Y$ 1990, $\$ 8,020,000,000$ in $F Y 2000, \$ 8,290,000,000$ in FY 2005, $\$ 9,080,000,000$ in FY 2010, $\$ 9,800,000,000$ in FY 2012, $10,000,000,000$ in $\mathrm{FY} 2013, \$ 11,530,000,000$ in FY 2014 , and $\$ 11,800,000,000$ in FY 2015.
The U.S. Department of Education was created in May 1980. It formerly was the Office of Education in the U.S. Department of 2009 (ARRA) because these funds are included only in tables that show FY 2009. Most of these funds had a 2 -year availability, meaning that they were available for the Department of Education to obligate during FY 2009 and FY 2010.
${ }^{3}$ Data adjusted by the federal budget composite deflator, as reported in the U.S. Office of Management and Budget's Budget of the S Government, Historical Tables, Fiscal Year 2017.

NOTE: To the extent possible, amounts reported do not represent obigations, but instead represent appropriations or (especially for eale years) outlays. Negative amounts occur when program receipts exceed outlays. Some data have been revised from previously published figures. Detail may not sum to totals because of rounding.

and students displaced by
Starting with FY 1994, funds for the Special Milk Program are included in child nutrition programs.
${ }^{8}$ Authorized under the Farm Security and Rural Investment Act of 2002 (Public Law 107-171), the McGovern-Dole International Food for Education and Child Nutrition Program carries out preschool and school feeding programs in foreign countries. ${ }^{9}$ These commodities are purchased under Section 32 of the Agricultural Adjustment Act of 1935 (Public Law 74-320), for use in child nutrition programs.

解绪 for this program since FY 1977, and it was completely phased out in FY 1984
ents in military corm Defense Domestic Dependent Elementary and Secondary Schools (DDESS) program supports stuEstablishlary communities in the United States, Guam, and Puerto Rico.
Formerly in the Office of Economic appropriated in FY 1980.
cormerly in the Office of Economic Opportunity. In FY 1972, program funds were transferred to the U.S. Department of Health, Education, and Welfare (later the U.S. Department of Health and Human Services). Today, the program is housed ${ }^{14}$ Created by the Family Support Act of 1988 (Public Law 100-485) to provide funds for the Job Opportunities a Creaing program. In 1997 AFDC was incorporated into the Temporary Assistance for Needy Families program Basic Skills ${ }^{15}$ Transferred from the U.S. Department of Transportation to the U.S. Department of Homeland Security in March 2003.
${ }^{1}$ D Data for 2013 through 2016 are estimated.
Provides funding for supplemental programs for eligible American Indian students in public schools.
${ }^{18}$ Beginning in 2012, funding for vocational training programs is included in inmate programs.
${ }^{19}$ Finances the cost of education courses for inmates in federal prisons.
U.S. Department of Labor in FYs 1971 and 1972

Economic Opportunity and were transterred to the U.S. Department of Labor in FYs 1971 and 1972. From FY 1994 through FY 2001, included the School-to-Work Opportunities program, which was administered jointly by the U.S. Departments of Education and Labor
Thabished in FY 1972 and closed in FY 1986.
${ }^{23}$ 24The states' share of revenue-sharing funds could not be spent on education in FYs 1981 through 1986
${ }^{24}$ Provided educational assistance allowances in order to restore lost educational opportunities to those individuals whose ${ }_{25}$ This program is in the Readjustment Benefits program, Chapter 31, and covers the costs of subsistence, tuition, books, supplies, and equipment for disabled veterans requiring vocational rehabilitation. ${ }_{26}$ This program is in the Readiustment Benefits program Chanter 35 and provid
${ }^{27}$ Appropriations
${ }^{28}$ Funding for education for the Appalachian Regional Commission is sorted by the type of grantee (e.g., local education agency, institution of higher education) as opposed to how the funding is actually used.
${ }^{29}$ "Elementary/secondary" obligations for FYS 2014, 2015, and 2016 include those items that impact elementary and secondarts education items not meeting the terms of "elementary/secondary." ${ }^{30}$ Most of these programs were transferred to the U.S. Department of Health,
ealth, Education, and Welfare, Office of Education in FY 1972.
${ }^{32}$ The Social Security Administration was formerly part of the U.S. Department of Health, Education, and Welfare, which became the U.S. Department of Health and Human Services in 1980. In 1994, the Social Security Administration became an ${ }_{33}$ independent agency.
${ }^{33}$ Benefits typically terminate at age 18 , unless a child is still a full-time elementary or secondary student. In that case, benefits continue until the child graduates, or until 2 months after reaching age 19, whichever comes first. Disabled children are also eligible to receive benefits after age 18 .
${ }^{34}$ Under the William D. Ford Federal Direct Loan Program (commonly referred to as the Direct Loan Program), the federal gov ernment uses Treasury funds to provide loan capital directly to schools, which then disburse loan funds to students 30, 2010; all new loans are originated through the Direct Loan Program. The FFEL Program made loan capital available to students and their families through private lenders. State and private nonprofit guaranty agencies administer the federal guarantee protecting FFEL lenders against losses related to borrower default. These agencies also collect on defaulted loans and provide other services to lenders.
${ }^{36}$ Transferred from the U.S. Department of Housing and Urban Development to the U.S. Department of Education when it was established in 1980.
ed from the National Science Foundation to the National Oceanic and Atmospheric Administration within the U.S ${ }_{38}$ Department of Commerce in October 1970
advanced degree pro gram; college degree program (officers); and Armed Forces Health Professions Scholarship program.
${ }^{40}$ Does not include Health Education Assistance Loans (HEAL)
${ }^{41}$ Alcohol, drug abuse, and mental health training programs are included starting in FY 1992.
${ }^{42}$ 2Beginning in FY 1992, data were included in the National Institutes of Health training grants program
${ }^{44}$ Transferred from the 4 S. 2004 4.SIn FY 2014, the Regional Graduate Fellowship program was Agency was dissolved in 1999.
${ }^{46}$ Chapter 33 was enacted in the Post-9/11 Veterans Educational Assistance Act of 2008 (Public Law 110-252).
${ }^{47}$ Part of the Ronald W. Reagan National Defense Authorization Act for FY 2005 (Public Law 108-375), enacted October 28, 2004. The Reserve Education Assistance Program (REAP) provides educational assistance to members of the National tember 11.2001. The National Defense Authorization Act of 2016 will phase out REAP by 2019 ${ }_{48 \text { Postsecondary student benefits were ended by the Omnibus Budget Reconciliation Act of }}$ were completely phased out by August 1985. ${ }_{50}$ Dissolved in 1999; functions were transferred to the U.S. Department of State and the newly created Broadcasting Board of Governors. 51 ncluded in the Educational and Cultural Affairs program in FYs 1980 through 1983, and became an independent program in FY 1984. ${ }^{51}$ Includes funding for higher education financial services and preparation programs
${ }^{52}$ Transferred from the U.S. Department of Education to the Institute of Museum and Library Services when the Institute ${ }_{53}$ Transferred from the US. Department ${ }^{54}$ The disaster relief program repairs and replaces damaged and destroyed school buildings. The Federal Emergency Management Agency, which administers this program, was transferred to the U.S. Department of Homeland Security in 2003. ${ }^{55 T h e}$ Second-Career Training Program for air traffic controllers was canceled in 1996.
${ }^{56}$ The National and Community Service Trust Act of 1993 (Public Law 103-82) merged two agencies (ACTION and the Commission on National and Community Service) to establish the Corporation for National and Community Service
Tunds for the Federal Emergency Management Agency in FY 1970 were in other agencies. This agency was transferies. The U.S. Department of Homeland Security in 2003 ${ }^{58}$ These programs include the Fall-Out Shelter Analysis, Blast Protection Design through FY 1992. Starting in FY 1993, earthquake training and safety for teachers and administrators for grades 1 through 12 are included.
${ }^{59}$ Transferred from the General Services Administration to the National Archives and Records Administration in April 1985 ${ }^{60}$ The Consolidated Appropriations Act of 2008 (Public Law 110-161) transferred the National Commission on Libraries and Information Science to the Institute of Museum and Library Services in 2008.
\& plant administered by colleges and universi${ }^{62}$ FY 1970 includes outlays for the Research and Training program. FY 1980 includes outlays for the National Institute of Education program. FY 1990 through FY 2000 amounts are outlays for the Office of Educational Research and Improvement. Amounts for FY 2005 and later years are for the Institute of Education Sciences; these amounts are outlays for years prior to FY 2010 and appropriations for later years.
${ }^{63}{ }^{64}$ he Office of Economic Opportunity was dissolved in 1981
${ }^{64}$ The U.S. Arms Control and Disarmament Agency was integrated into the U.S. Department of State in 1999
de the Appalachian Regional Commission, National Archives and Records Administration, and Social
NOTE: To the extent possible, amounts reported do not represent obligations, but instead represent appropriations or (especially for earlier years) outlays. Negative amounts occur when program receipts exceed outlays. Some data have been revised from previously pubished figures. Detail may not sum to totals because of rounding.

## CHAPTER 5

## Outcomes of Education

This chapter contains tables comparing educational attainment and workforce characteristics. The data show labor force status, income levels, and occupations of high school dropouts and high school and college graduates. Most of these tables are based on data from the U.S. Census Bureau and the U.S. Bureau of Labor Statistics. Population characteristics are provided for many of the measures to allow for comparisons among various demographic groups. While most of the tables in this chapter focus on labor market outcomes, the chapter ends with several tables on adults' attitudes, skills, and participation in continuing education.

Statistics related to outcomes of education appear in other sections of the Digest. For example, statistics on educational attainment of the entire population are in chapter 1. More detailed data on the numbers of high school and college graduates can be found in chapters 2 and 3 . Chapter 3 contains trend data on the percentage of high school completers going to college. Chapter 6 includes international comparisons of employment rates by educational attainment. Additional data on earnings by educational attainment may be obtained from the U.S. Census Bureau's Current Population Reports, Series P-60. The U.S. Bureau of Labor Statistics has a series of publications regarding the educational characteristics of the labor force. Further information on survey methodologies can be found in Appendix A: Guide to Sources and in the publications cited in the table source notes.

## Labor Force

The labor force participation rate-that is, the percentage of people either employed or actively seeking employmentwas generally higher for adults with higher levels of educational attainment than for those with less education. Among 25- to 64-year-old adults, 86 percent of those with a bachelor's or higher degree participated in the labor force in 2015, compared with 72 percent of those who had completed only high school and 60 percent of those who had not completed high school (table 501.10). Within each education level, the labor force participation rate also varied by race/ethnicity. For 25- to 64-year-olds who had completed only high school, the 2015 labor force participation rate was highest for Hispanics (76 percent), followed by Asians (74 percent), then Whites ( 72 percent), then Blacks ( 68 percent), and then American Indians/Alaska Natives ( 62 percent). For 25 - to 64 -year-olds with a bachelor's or higher degree in 2015, the labor force par-
ticipation rate was highest for Blacks (88 percent), followed by Hispanics and Whites (both at 86 percent), and then American Indians/Alaska Natives ( 83 percent). The labor force participation rate for Asians with a bachelor's or higher degree ( 82 percent) was lower than the rates for Blacks, Hispanics, and Whites, but not measurably different from the rate for American Indians/Alaska Natives.

The unemployment rate-that is, the percentage of people in the labor force who are not employed and who have made specific efforts to find employment sometime during the prior 4 weeks-was generally higher for people with lower levels of educational attainment than for those with more education. In 2016, the unemployment rate for 25- to 64-year-old adults who had not completed high school was 8 percent, compared with 6 percent for those who had completed only high school and 2 percent for those with a bachelor's or higher degree (table 501.80). Within each education level, the unemployment rates for 16 - to 19 -year-olds and 20 - to 24 -year-olds tended to be higher than the unemployment rate for 25- to 64-year-olds. For example, among 20- to 24 -year-olds who had not completed high school and were not enrolled in school, the 2016 unemployment rate was 17 percent, compared with 8 percent for 25 - to 64 -year-olds with the same level of educational attainment. Among adults in the 25 - to 34 -year-old age group, the 2016 unemployment rate was 13 percent for those who had not completed high school, 9 percent for high school completers, and 2 percent for those with a bachelor's or higher degree (table 501.80 and figure 22).

The employment to population ratio-that is, the percentage of the population that is employed-was generally higher for people with higher levels of educational attainment than for those with less education. Among 25- to 34 -year-olds, for example, 86 percent of those with a bachelor's or higher degree were employed in 2016, compared with 70 percent of those who had completed only high school and 59 percent of those who had not completed high school (table 501.50 and figure 23).

In 2016, about half ( 51 percent) of all employed people age 25 and over had a postsecondary (i.e., an associate's or higher) degree (table 502.10). Seven percent of employed people age 25 and over had not completed high school.

The relative difficulties that high school dropouts encounter in entering the job market are highlighted by comparing the labor force participation and employment rates of recent high school dropouts with those of recent high school completers. In October 2015, about 46 percent of 2014-15
dropouts participated in the labor force (i.e., were either employed or looking for work), with 37 percent employed and 9 percent looking for work (table 504.20 and figure 24). In contrast, the labor force participation rate was 73 percent for 2014-15 high school completers who were not enrolled in college, with 58 percent employed and 15 percent looking for work (table 504.10 and figure 24).

## Earnings

Median annual earnings were generally higher for adults with higher levels of educational attainment than for those with lower levels of educational attainment. Among full-time year-round workers age 25 and over, both males and females who had more education generally earned more than their counterparts of the same sex who had less education. In 2015, for example, males whose highest level of educational attainment was a bachelor's degree earned 72 percent more than males whose highest level of attainment was high school completion, and females who had attained a bachelor's degree earned 65 percent more than females who had only completed high school (table E, table 502.20, and figure 25).

Among full-time year-round workers age 25 and over, the earnings of females were lower than the earnings of males overall, as well as by education level. For example, median 2015 earnings for full-time year-round workers with a bachelor's degree were 38 percent higher for males than for females. Among those who had only completed high school, median 2015 earnings were 33 percent higher for males than for females.

From 1995 to 2015, percentage changes in earnings (after adjustment for inflation) varied by highest level of educational attainment and sex. In constant 2015 dollars, the median annual earnings of male full-time year-round workers age 25 and over who had started but not completed high school decreased 7 percent from $1995(\$ 34,510)$ to 2015 ( $\$ 32,140$ ), and the median earnings of those who had completed high school decreased 9 percent from $1995(\$ 45,900)$ to 2015 ( $\$ 41,570$ ). For males with a bachelor's degree, median annual earnings in constant 2015 dollars increased 1 percent from $1995(\$ 70,410)$ to $2015(\$ 71,390)$. In constant 2015 dollars, the median annual earnings of female full-time year-round workers who had started but not completed high school decreased 8 percent from $1995(\$ 24,610)$ to 2015 $(\$ 22,670)$, and the median earnings of those who had completed high school were 2 percent lower in $2015(\$ 31,250)$ than in 1995 ( $\$ 31,830$ ). For females with a bachelor's degree, median annual earnings in constant 2015 dollars increased 4 percent from $1995(\$ 49,850)$ to $2015(\$ 51,680)$.

Table E. Median annual earnings of full-time year-round workers 25 years old and over, by selected levels of educational attainment and sex: 1995, 2005, and 2015
[In constant 2015 dollars]

| Sex and year | Some high school, no completion | High school completion | Bachelor's degree |
| :---: | :---: | :---: | :---: |
| Males |  |  |  |
| 1995.. | \$34,510 | \$45,900 | \$70,410 |
| 2000. | 34,540 | 47,210 | 77,540 |
| 2005............................................. | 33,000 | 44,060 | 72,840 |
| 2015. | 32,140 | 41,570 | 71,390 |
| Females |  |  |  |
| 1995............................................. | \$24,610 | \$31,830 | \$49,850 |
| 2000............................................. | 24,660 | 34,370 | 55,630 |
| 2005............................................. | 24,420 | 31,910 | 51,180 |
| 2015............................................. | 22,670 | 31,250 | 51,680 |

SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Reports, Series P-60, Money Income in the United States, 1995 and 2000; and Current Population Survey (CPS), 2006 and 2016 Annual Social and Economic Supplement.

For 25- to 29-year-old full-time year-round workers with a bachelor's degree, median annual earnings were \$45,040 in 2015 (table 505.10 and figure 26). However, the 2015 median annual earnings of 25- to 29-year-old full-time yearround workers with a bachelor's degree varied by degree field. For example, median annual earnings for those with a bachelor's degree in the combined category of engineering and engineering-related fields $(\$ 66,010)$ were higher than for those whose degree was in computer and information systems $(\$ 60,000)$, health professions $(\$ 50,050)$, or business ( $\$ 49,850$ ). Median annual earnings in 2015 were relatively low for 25- to 29-year-old full-time year-round workers with degrees in such fields as fine and commercial arts $(\$ 38,000)$, psychology ( $\$ 38,920$ ), and education ( $\$ 38,960$ ).

Overall, the median annual earnings of 25- to 29-year-old full-time year-round workers with a bachelor's degree were 5 percent lower in 2015 than in 2010 (after adjustment for inflation). However, changes in median annual earnings from 2010 to 2015 varied by degree field. For example, there was no measurable change in inflation-adjusted median annual earnings for 25- to 29-year-old full-time year-round workers with a bachelor's degree in business, computer and information systems, engineering and engineering-related fields, fine and commercial arts, psychology, and the social sciences. Inflation-adjusted median annual earnings were lower in 2015 than in 2010 for those with a bachelor's degree in health professions ( 9 percent lower), the natural sciences ( 7 percent lower), education ( 6 percent lower), and communications and communications technologies (4 percent lower).

Figure 22. Unemployment rates of persons 25 to 34 years old, by highest level of educational attainment: Selected years, 1990 through 2016

${ }^{1}$ Includes equivalency credentials, such as the GED credential.
${ }^{2}$ Includes persons with no college degree as well as those with an associate's degree.
NOTE: The unemployment rate is the percentage of persons in the civilian labor force who are not working and who made specific efforts to find employment sometime during the prior 4 weeks. The civilian labor force consists of all civilians who are employed or seeking employment.

Figure 23. Employment to population ratios of persons 25 to 34 years old, by highest level of educational attainment: Selected years, 1990 through 2016

[^131]Figure 24. Percentage distribution of 2014-15 high school dropouts and high school completers not enrolled in college, by labor force status: October 2015

High school completion status
!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
NOTE: Estimates are for 16 - to 24 -year-olds only. Dropouts are those who left school in the 12 -month period ending in October 2015 without completing a high school credential. Completers are those who received either a high school diploma or an equivalency credential between January and October 2015. Excludes persons in the military and persons living in institutions (e.g., prisons or nursing facilities). Graphic display was generated using unrounded data. Detail may not sum to totals because of rounding.

Percentage of the civilian population who are employed or seeking employment.
${ }^{2}$ Number of persons employed as a percentage of the civilian population.
${ }^{3}$ The percentage of persons in the civilian labor force who are not working and who made specific efforts to find employment dur during the prior 4 weeks.
${ }^{4}$ Includes equivalency credentials, such as the GED credential.

NOTE: Estimates are for the entire civilian population, including persons living in households and persons living in group quarters (e.g., college residence halls, residential treatment centers, or correctional facilities). Race categories exclude persons of Hispanic ethnicity. Totals include racial/ethnic groups not separately shown. Standard errors were computed using SOURCE. US . Detail may not sum to totas because of rounding.
unpublished tabulations. (This table was prit (ACS), 2013, 2014, and 2015

Table 501.20. Labor force participation, employment, and unemployment of persons 16 to 24 years old who are not enrolled in school, by age group, sex, race/ethnicity, and educational attainment: 2013, 2014, and 2015

## $\dagger$ Not applicable.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Percentage of the civilian population who are employed or seeking employment.
${ }^{2}$ Number of persons employed as a percentage of the civilian population.
${ }^{3}$ The percentage of persons in the civilian labor force who are not working and who made specific efforts to find employment sometime during the prior 4 weeks.

4ncludes equivalency credentials, such as the GED credential.
NOTE: Table excludes persons enrolled in school. Estimates are for all nonenrolled civilians in the given age range, including persons living in households and persons living in group quarters (e.g., residential treatment centers or correctional facilities). Race categories exclude persons of Hispanic ethnicity. Totals include racial/ethnic groups
were computed using replicate weights. Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Commerce, Census Bureau, American Community Survey (ACS), 2013, 2014, and 2015, unpublished tabulations. (This table was prepared May 2017.)

Table 501.30. Number and percentage of persons 16 to 24 years old who were neither enrolled in school nor working, by educational attainment, age group, sex, family poverty status, and race/ethnicity: 2006, 2011, and 2016

## $\dagger$ Not applicable.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Includes equivalency credentials, such as the GED credential.
${ }^{2}$ Includes persons with no college degree as well as those with an associate's degree.
${ }^{3}$ Poor is defined to include families with incomes below the poverty threshold. Nonpoor is defined to include families with incomes at or above the poverty threshold. For information
about how the Census Bureau determines who is in poverty, see http://www.census.gov/topics/ income-poverty/poverty/quidance/poverty-measures html
NOTE: Race categories exclude persons of Hispanic ethnicity. Standard errors were computed using replicate weights. Detail may not sum to totals because of rounding. Data are based on sample surveys of the noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities); this table includes only data on the civilian population (excludes all military personnel).

## -Not available.

1Not applicable.
1'Data for 16 - to 19 -year-olds and 20 - to 24 -year-olds exclude persons enrolled in school.
${ }^{2}$ Includes equivalency credentials, such as the GED credential.
${ }^{3}$ Includes persons with no college degree as well as those with an associate's degree.

NOTE: Data are based on sample surveys of the noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities); this table includes only data on the civilian population (excludes all military personnel). For each age group, the employment to population ratio is the number of persons in that age group who are employed as a perSOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), Annual Social and Economic Supplement, selected years, 1975 through 2016. (This table was prepared October 2016.)

Table 501.60. Employment to population ratios of males 16 to 64 years old, by age group and highest level of educational attainment: Selected years, 1975 through 2016

[^134]NOTE: Data are based on sample surveys of the noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities); this table includes only data on the civilian population (excludes all military personnel). For each age group, the employment to population ratio of males is the number of males in that age group who are employed as SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), Annual Social and Economic Supplement, selected years, 1975 through 2016. (This table was prepared October 2016.)

Table 501.70. Employment to population ratios of females 16 to 64 years old, by age group and highest level of educational attainment: Selected years, 1975 through 2016
[Standard errors appear in parentheses]

## -Not available.

Not applicable.
1Data for 16 -to 19 -year-olds and 20 - to 24 -year-olds exclude persons enrolled in school.
${ }^{2}$ Includes equivalency credentials, such as the GED credential.
${ }^{3}$ Includes persons with no college degree as well as those with an associate's degree.

NOTE: Data are based on sample surveys of the noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities); this table includes only data on the civilian population (excludes all military personnel). For each age group, the employment to population ratio of females is the number of females in that age group who are employed as a percentage of the female civilian population in that age group.
SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), Annual Social and Economic Supplement, selected years, 1975 through 2016. (This table was prepared October 2016.)

Table 501.80. Unemployment rates of persons 16 to 64 years old, by age group and highest level of educational attainment: Selected years, 1975 through 2016

## - Not available.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent. Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
'Data for 16 - to 19 -year-olds and 20 - to 24 -year-olds exclude persons enrolled in school.
Includes equivalency credentials, such as the GED credential.
Includes persons with no college degree as well as those with an associate's degree.

NOTE: Data are based on sample surveys of the noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities); this table includes only data on the civilian population (excludes all military personnel). The to find employment sometime during the prior 4 weeks. The civilian labor force consists of all civilians who are employed or seeking employment.
SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), Annual Social and Economic Supplement, selected years, 1975 through 2016. (This table was prepared October 2016.)

## -Not available.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent. Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
Data for 16 - to 19 -year-olds and 20 - to 24 -year-olds exclude persons enrolled in school.
Includes equivalency credentials, such as the GED credential.
Includes persons with no college degree as well as those with an associate's degree.

NOTE. Data are based on sample surveys of the noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities); this table includes only data on the civilian population (excludes all military personnel). The a find seeking employment.
SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), Annual Social and Economic Supplement, selected years, 1975 through 2016. (This table was prepared October 2016.)

## - Not available.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent. $\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
Data for 16 - to 19 -year-olds and 20 - to 24 -year-olds exclude persons enrolled in school.
Includes equivalency credentials, such as the GED credential.
Includes persons with no college degree as well as those with an associate's degree.

NOTE: Data are based on sample surveys of the noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities); this table includes only data on the civilian population (excludes all military personnel). The to find employment sometime during the prior 4 weeks. The civilian labor force consists of all civilians who are employed or seeking employment.
SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), Annual Social and Economic Supplement, selected years, 1975 through 2016. (This table was prepared October 2016.)

Table 502.10. Occupation of employed persons 25 years old and over, by highest level of educational attainment and sex: 2015 and 2016

## \section*{-Not available.} <br> $\dagger$ Not applicable

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
Includes 1 to 3 years of high school for 1990
Includes 4 years of high school for 1990 .
Includes 1 to 3 years of college and associate's degrees for 1990.
${ }^{4}$ Includes 4 or more years of college for 1990.
Includes 4 years of college for 1990
${ }^{6}$ Not reported separately for 1990.

Constant doilars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor. ${ }^{8}$ Data not available for 1990 through 1995.
NOTE: Detail may not sum to totals because of rounding

!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
Low income refers to the bottom 20 percent of all family incomes; high income refers to the top 20 percent of all family incomes; and middle income refers to the 60 percent in between.
-Percent employed includes those who were employed but not at work during the survey week.
${ }^{3}$ Beginning in 2010, standard errors were computed using replicate weights, which produced more precise values than the generalized variance function methodology used in prior years.
${ }^{4}$ Hours worked per week refers to the number of hours the respondent worked at all jobs during the survey week. The estimates of the percentage of high school students age 16 and over who worked less than 15 hours per week or 15 or more hours per week exclude those who were employed but not at work during the survey week. Therefore, detail may not sum to NOTE: Race categories exclude persons of Hispanic ethnicity. Totals include racial/ethnic groups not shown separately. SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October, 1970 through 2015 (This table was prepared May 2017.)

Table 503.20. Percentage of college students 16 to 24 years old who were employed, by attendance status, hours worked per week, and control and level of institution: Selected years, October 1970 through 2015
[Standard errors appear in parentheses]

## $\dagger$ Not applicable.

!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.

!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\dagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{2}$ Excludes those who were employed but not at work ding ther survey week; therefore, detail may not sum to total percentage employed. Hours worked per week refers to the number of hours worked at all jobs during the survey week.
${ }^{3}$ Householders are persons in whose name the housing unit is owned or rented. Never-married students living away from home in college dormitories are not considered householders
${ }^{4}$ Own children are never-married sons and daughters of the student, incluaing stepchildren and adopted children.
${ }^{5}$ Refers to all students who do not live with a spouse, including students who are single, divorced, separated, or widowed. NOTE: Students were classified as full time if they were taking at least 12 hours of classes during an average school week sample surveys of the civilian noninstitutionalized population, which excludes persons in the military and persons living in institutions (e.g., prisons or nursing facilities). Bensus Bureau, Current Population Survey (CPS), October, 2005, 2010, and $^{\text {and }}$ SOURCE: U.S. Department of Commerce, 2015. (This table was prepared October 2016.)

Table 504.10. Labor force status of 2013, 2014, and 2015 high school completers, by college enrollment status, sex, and race/ethnicity: October 2013, 2014, and 2015
[Standard errors appear in parentheses]

## Not applicable.

## Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent

fReporting standards not met (too few cases for a reliable estimate).
Theporting standards not met (too tew cases for a reiable estimate).
TThe labor force participation rate is the percentage of persons who are either employed or seeking employment
${ }^{2}$ The labor force includes all employed persons plus those seeking employment. The unemployment rate is the percentage of persons in the labor force who are not working and who made specific efforts to find employment sometime during the prior 4 weeks.
${ }^{3}$ Includes 16 - to 24 -year-olds who completed high school between January and October of the given year. Includes recipients of equivalency credentials as well as diploma recipients.

NOTE: Data are based on sample surveys of the civilian noninstitutionalized population, which excludes persons in the military and per sons living in institutions (e.g., prisons or nursing facilities). Data are for October of a given year. Standard errors were computed using may not sum to totals because of rounding. table was prepared April 2017.)

$\dagger$ Not applicable.
! Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ The labor force participation rate is the percentage of persons who are either employed or seeking employment.
${ }^{2}$ The labor force includes all employed persons plus those seeking employment. The unemployment rate is the percentage of persons in the labor force who are not working and who made specific efforts to find employment sometime during the prior 4 weeks.
${ }^{3}$ Beginning in 2010, standard errors for the individual year estimates were computed using replicate weights in order to produce more precise values. This methodology can only be used for these estimates. For all other estimates in the table, standard errors were computed using generalized variance function methodology.
${ }^{4}$ A 3-year moving average is the arithmetic average of the year indicated, the year immediately preceding, and the year immediately following. For example, the estimates shown for 2000 reflect an average of 1999, 2000, and 2001. Use of a moving average increases the sample size, thereby reducing the size of sampling errors and producing more stable estimates. For the final year of available data, a 2 -year moving average is used; thus, the estimates for 2015 reflect the average of 2014 and 2015.
NOTE: Data are based on sample surveys of the civilian noninstitutionalized population, which excludes persons in the military and persons living in institutions (e.g., prisons or nursing facilities). Data are for October of a given year. Dropouts are considered persons 16 to 24 years old who dropped out of school in the 12-month period ending in October of years shown. Includes dropouts from any grade, including a small number from elementary and middle schools. Totals include race categories not separately shown. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding. SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), selected years, October 1979 through 2015. (This table was prepared May 2017.)

Table 505.10. Number, percentage distribution, unemployment rates, and median earnings of 25 - to 29 -year-old bachelor's degree holders and percentage of degree holders among all 25 - to 29 -year-olds, by field of study and science, technology, engineering, or mathematics (STEM) status of field: 2010 and 2015
[Standard errors appear in parentheses]

## $\dagger$ Not applicable.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor. ${ }^{2}$ STEM fields include biological and biomedical sciences, computer and information sciences, engineering and engineering NOTE: The first bachelor's degree maior rand physical sciences and science technologies.
were able to report a second bachelor's degree major and may possess advanced degrees in other fields. Median earnings
are for full-time employees working 35 or more hours per week. Data are based on sample surveys of the entire population residing within the United States, including both noninstitutionalized persons (e.g., those living in households, college housing, or military housing located within the United States) and institutionalized persons (e.g., those living in prisons, nursing facilities, or other healthcare facilities). Detail may not sum to totals because of rounding. Some data have been revised from previously published figures.
(ACS) Public Use Microdata Sample (PUMS) data. (This table was prepared February 2017.)

## Rounds to ze

!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is
0 percent or greater.
stimates by major occupation group and class of worker are restricted to individuals currently employed
${ }^{2}$ Estimates of median annual earnings are restricted to individuals working full time and year round.

NOTE: Estimates are for the entire population of civilian 25 - to 34 -year-old bachelor's degree holders, including persons living in households and persons living in group quarters (such as college residence halls, residential treatment centers, and correctional facilities). Standard errors were computed using replicate weights. Detail may not sum to totals because of rounding Totals include other racial/ethnic groups not separately shown. Race categories exclude persons of Hispanic ethnicity. SOURCE: U.S. Department of Commerce, Census Bureau, American Community Survey (ACS), 2015. (This table was pre-
pared July 2017.)

Table 505.20. Unemployment rate of 25 - to 34 -year-olds with a bachelor's or higher degree, by undergraduate field of study, sex, race/ethnicity, and U.S. nativity and citizenship status: 2015

## $\dagger$ Not applicable.

nterpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50
ercent or greater.
${ }^{1}$ Total includes other racial/ethnic groups not shown separately.
${ }^{2}$ Includes persons reporting American Indian alone, persons reporting Alaska Native alone, and persons from American ndian and/or Alaska Native tribes specified or not specified.

District of Columbia, Puerto Rico, American Samoa, Guam, the U.S. Virgin Islands, NOTE: The unemployment rate is the percentage of labor U.S.-citizen parents.
work. The labor force consists of persons who are employed as well as persons who are not employed but are looking for
work. (It does not include those who are neither employed nor looking for work.) Estimates are for the entire population of bachelor's degree holders in the indicated age range, including persons living in households and persons living in group quarters (such as college residence halls, residential treatment centers, military barracks, and correctional facilities). The first
bachelor's degree major reported by respondents was used to classify their field of study, even though they were able to bandors degree major reported by respondents was used to classify their field of study, even though they were abe report a second bachelor's degree major and may possess advanced degrees in other fields. STEM fields, as defined here,
consist of the fields specified in columns 4 through 11. Data were assembled based on major field aggregations, except that consist of the fields specified in columns 4 through 11. Data were assembled based on major field aggregations, except that
management of STEM activities was counted as a STEM field instead of a business field. Race categories exclude persons of Hispanic ethnicity.

Department of Commerce, Census Bureau, American Community Survey (ACS), 2015. (This table was prepared March 2017.)

Table 505.30. Among employed 25 - to 34 -year-olds with a bachelor's degree in a science, technology, engineering, or mathematics (STEM) field, percentage with STEM and non-STEM occupations, by sex, race/ethnicity, and U.S. nativity and citizenship status: 2015
[Standard errors appear in parentheses]

[^138]${ }^{5}$ The labor force is made up of persons who are employed and persons who are not employed but are looking for work. (It does not include those who are neither employed nor looking for work.) The unemployment rate is the percentage of labor force participants who are not employed but are actively seeking work. ${ }^{6}$ For 2001, does not include mathematics professions.
NOTE: Data exclude bachelor's degree recipients from U.S. Service Academies, deceased graduates, and graduates living at foreign addresses at the time of the survey. Detail may not sum to totals because of rounding.

## $\dagger$ Not applicable.

\#Rounds to zero.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50
percent or greater.
${ }^{1}$ Scale ranges from 0 to 500 .
${ }^{2}$ Proficiency levels 4 and 5 are combined for reporting purposes. The proficiency levels correspond to the score ranges shown in parentheses: below level 1 ( $0-175$ ), level 1 (176-225), level 2 (226-275), level 3 ( $276-325$ ), and level $4 / 5$ ( $326-500$ ). For ployed, Young, and Older Adults in Sharper Focus: Results from the Program for the International Assessment of Adult Competencies (PIAAC) 2012/2014 (NCES 2016-039rev), available at http://nces.ed.gov/pubs2016/2016039rev.pdf.
${ }^{3}$ Includes persons of all other races and those of Two or more races.
Includes completion through an equivalency program, such as a GED program.
${ }^{5}$ Excludes those who were employed but did not report the number of hours worked per week.
${ }^{6}$ Full-time employment is defined as working 35 hours or more per week.
${ }^{8}$ Annual earnings were calculated based on monthly earnings, which include bonuses and self-employment income. Excludes those who reported no earnings.
NOTE: Results in this table are based on combined data from two rounds of U.S. data collection. The first round, completed in 2012 , was the main data collection. The second round, completed in 2014, was a supplemental round, conducted to expand
the sample of U.S. adults, allowing for more in-depth analysis. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding. SOURCE: U.S. Department of Education of Adult Competencies (PIAAC), U.S. PIAAC 2012/2014, retrieved May 9, 2017, from the PIAAC International Data Explorer (https://nces.ed.gov/surveys/piaac/ideuspiaac/). (This table was prepared May 2017.)

Table 507.16. Percentage of 25 - to 65 -year-olds who were not assessed in the problem solving in technology-rich environments domain and average scale score and percentage distribution of those who were assessed, by proficiency level and selected characteristics: 2012/2014

$\dagger$ Not applicable.
\#Rounds to zero.
! Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Items on the problem solving in technology-rich environments domain were offered only on computer. This column shows the percentages of 25 - to 65 -year-old respondents who were not assessed in this domain because they were unable to or elected not to take a computerbased assessment.
${ }^{2}$ Results are based on only those respondents who were assessed in the domain of problem solving in technology-rich environments.
${ }^{3}$ Scale ranges from 0 to 500 .
${ }^{4}$ The proficiency levels correspond to the score ranges shown in parentheses: below level 1 (0-240), level 1 (241-290), level 2 (291-340), and level 3 (341-500). For details about the proficiency levels as well as examples of specific tasks at each level, see appendix B of Skills of U.S. Unemployed, Young, and Older Adults in Sharper Focus: Results from the Program for the International Assessment of Adult Competencies (PIAAC) 2012/2014 (NCES 2016-039rev), available at http://nces.ed.gov/pubs2016/2016039rev.pdf.
${ }^{5}$ Includes persons of all other races and those of Two or more races
${ }^{6}$ Includes completion through an equivalency program, such as a GED program.
${ }^{7}$ Excludes those who were employed but did not report the number of hours worked per week.
${ }^{8}$ Full-time employment is defined as working 35 hours or more per week.
${ }^{9}$ Part-time employment is defined as working less than 35 hours per week.
${ }^{10}$ Annual earnings were calculated based on monthly earnings, which include bonuses and self-employment income. Excludes those who reported no earnings.
${ }^{11}$ The item response rate is below 85 percent. Missing data have not been explicitly accounted for. NOTE: Results in this table are based on combined data from two rounds of U.S. data collection. The first round, completed in 2012, was the main data collection. The second round, completed in 2014, was a supplemental round, conducted to expand the sample of U.S. adults, allowing for more in-depth analysis. Problem solving in technology-rich environments is defined as "using digital technology, communication tools, and networks to acquire and evaluate information, communicate with others, and perform practical tasks." Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.

NOTE: Adult basic education provides instruction in basic skills for adults age 16 and over functioning at literacy levels below the secondary level. Adult secondary education provides instruction at the high school level for adults who are seeking to pass the GED or obtain an adult high school cre-
dential. English as a second language instruction is for adults who lack proficiency in English and who seek to improve their literacy and competence in English.

## -Not available

$\dagger$ Not applicable.
!!nterpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
${ }^{1}$ The 2005 estimates on participation in career- or job-related courses were based on responses to multiple questions. Specifically, respondents were first asked what courses they had taken, and then whether each course was career- or job-related. In contrast, 1995 and 1999 respondents were asked a single, general question about whether they had participated in any career- or job-related courses. Therefore, 2005 results may not be comparable to results from the earlier years.
${ }^{2}$ Detail may not sum to totals due to missing locale information
${ }^{3}$ For 2005 , figures include "Production workers" occupations data.
NOTE: Data Detail may not sum to totals because of rounding. SOURCE: U.S. Department of Education, National Center for Education Statistics, Adult Education Survey (AE-NHES:1995,
AE-NHES:1999, and AE-NHES:2005) of the National Household Education Surveys Program. (This table was prepared October 2010.)

## CHAPTER 6 <br> International Comparisons of Education

#### Abstract

This chapter offers a broad perspective on education across the nations of the world. It also provides an international context for examining the condition of education in the United States. Insights into the educational practices and outcomes of the United States are obtained by comparing them with those of other education systems. Most of the education systems represent countries; however, some of the tables in this chapter also include data for subnational entities with separate education systems, such as Hong Kong. The National Center for Education Statistics (NCES) carries out a variety of activities in order to provide statistical data for international comparisons of education.

This chapter presents data drawn from materials prepared by the United Nations Educational, Scientific, and Cultural Organization (UNESCO); the Organization for Economic Cooperation and Development (OECD); and the International Association for the Evaluation of Educational Achievement (IEA). Basic summary data on enrollments and enrollment ratios, teachers, educational attainment, and finances were synthesized from data published by the OECD in the Online Education Database and the annual Education at a Glance report, as well as from data collected by UNESCO. Even though these tabulations are carefully prepared, international data users should be cautioned about the many problems of definition and reporting involved in the collection of data about the education systems of the world, which vary greatly in structure from country to country (see the UNESCO entry at the end of Appendix A: Guide to Sources).

Also presented in this chapter are data from two international assessments of student achievement that are carried out under the aegis of IEA and supported by NCES. The Trends in International Mathematics and Science Study (TIMSS), formerly known as the Third International Mathematics and Science Study, assesses the mathematics and science knowledge and skills of fourth- and eighth-graders every 4 years. The Progress in International Reading Literacy Study (PIRLS) measures the reading knowledge and skills of fourth-graders every 5 years.

This chapter includes additional information from two OECD assessments supported by NCES. The Program for International Student Assessment (PISA) provides performance scores of 15 -year-olds in the areas of reading, mathematics, and science literacy; it also measures general, or crosscurricular, competencies such as learning strategies. The Program for the International Assessment of Adult Competencies (PIAAC) assesses the cognitive skills of adults in the areas of literacy, numeracy, and problem solving in technology-rich
environments. PIAAC measures relationships between adults’ skills in these areas and their educational background, workplace experiences, occupational attainment, and use of information and communication technology. While PISA and PIAAC focus on OECD countries, data from some nonOECD education systems are also provided.

Further information on survey methodologies is in Appendix A: Guide to Sources and in the publications cited in the table source notes.

## Population

Among reporting OECD countries, Mexico had the largest percentage of its population made up of young people ages 5 to 14 (19 percent) in 2013, followed by Israel (18 percent) and Turkey (17 percent) (web-only table 601.30). OECD countries with small percentages of people in this age group included the Czech Republic, Germany, Italy, Japan, Latvia, and Slovenia (all at 9 percent), and Austria, Estonia, Greece, Hungary, the Republic of Korea, Poland, Portugal, the Slovak Republic, Spain, and Switzerland (all at 10 percent). In the United States, the proportion of 5- to 14-year-olds was 13 percent, which was higher than in most other OECD countries.

## Enrollments

In 2014, about 1.5 billion students were enrolled in schools around the world (table 601.10). Of these students, 719 million were in elementary programs, 568 million were in secondary programs, and 208 million were in postsecondary programs.

From 2000 to 2014, enrollment changes varied from region to region. Changes in elementary enrollment ranged from increases of 64 percent in Africa, 39 percent in Oceania, and less than 1 percent in Asia to decreases of 8 percent in Europe, 7 percent in Central and South America (including Latin America and the Caribbean), and 2 percent in Northern America (including Bermuda, Canada, Greenland, St. Pierre and Miquelon, and the United States) (table F, table 601.10, and figure 27). Over the same period, secondary enrollment increased by 88 percent in Africa, 33 percent in Asia, 12 percent in Central and South America, 7 percent in Northern America, and 4 percent in Oceania, but decreased by 18 percent in Europe. At the postsecondary level, enrollments increased in all major areas of the world from 2000 to 2014. Postsecondary enrollment rose by 184 percent in Asia, 114 percent in Africa, 109 percent in Central and South America, 67 percent in Oceania, 46 percent in Northern America, and 20 percent in Europe.

Table F. Population and enrollment at different levels in major areas of the world: 2000 and 2014
[In millions]

| Area of the world | Population | Enrollment |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Elementary | Secondary | Postsecondary |
| World total |  |  |  |  |
| 2000.................. | 6,084.5 | 656.9 | 453.0 | 99.7 |
| 2014.................. | 7,167.9 | 719.9 | 568.0 | 207.5 |
| Africa |  |  |  |  |
| 2000 ............... | 802.7 | 109.4 | 38.6 | 6.1 |

| 2014 .............. | 36.7 | 4.3 | 3.5 | 1.7 |

SOURCE: United Nations Educational, Scientific, and Cultural Organization, unpublished tabulations, and U.S. Department of Commerce, Census Bureau, International Data Base.

Across OECD countries in 2014, an average enrollment rate of 98 percent was reported for 5 - to 14 -year-olds, and the enrollment rate was at least 93 percent in all 32 of the OECD countries that reported data for this age group (table 601.35). In the United States, the enrollment rate for 5- to 14 -year-olds was 97 percent in 2014. Among the 33 OECD countries that reported 2014 data for 15- to 19-year-olds, 7 countries had rates of at least 90 percent and 2 countries had rates below 70 percent (table 601.40). The U.S. enrollment rate for 15 - to 19 -year-olds was 82 percent in 2014, which was lower than the OECD average of 84 percent. Among the 32 countries that reported 2014 data for 20- to 29 -year-olds, 2 countries had rates above 40 percent and 3 countries had rates of 15 percent or less. The U.S. enrollment rate for $20-$ to 29 -year-olds was 25 percent in 2014 , which was lower than the OECD average of 28 percent.

In all 32 OECD countries that reported separate secondary and postsecondary enrollment data for 17-year-olds in 2014, a higher percentage of 17 -year-olds were enrolled at the secondary level than at the postsecondary level. For older students, however, patterns of enrollment at the secondary and postsecondary levels varied across OECD countries in 2014. For example, 15 countries had a higher percentage of their 19-year-olds enrolled at the secondary level, while 17 countries had a higher percentage enrolled at the postsecondary level. The percentage of 19 -year-olds enrolled at the secondary level was at least 5 times higher than the percentage enrolled at the postsecondary level in 3 countries. At the other end of the spectrum, the percentage of 19-year-olds enrolled at the postsecondary level was at least 5 times higher than the percentage enrolled at the secondary
level in 4 countries, including the United States ( 52 vs. 6 percent). For 20-year-olds, although only 3 OECD countries reported a higher 2014 enrollment rate at the secondary than at the postsecondary level, there were 10 countries that reported a secondary enrollment rate of at least 15 percent. For the combined 20- to 29-year-old age group, there were no countries that reported higher enrollment rates at the secondary than at the postsecondary level, and all secondary enrollment rates were below 15 percent. At the postsecondary level, only 2 OECD countries reported enrollment rates below 15 percent for this age group, and 8 countries reported rates that were at least 25 percent. The U.S. postsecondary enrollment rate for 20 - to 29 -year-olds was 24 percent in 2014, which was higher than the OECD average postsecondary enrollment rate of 22 for this age group.

## Achievement

## Mathematics and Science at Grades 4 and 8

The 2015 Trends in International Mathematics and Science Study (TIMSS) assessed students' mathematics and science performance at grades 4 and 8 . Mathematics performance was assessed in 43 countries at grade 4 and in 34 countries at grade 8 . Science performance was assessed in 42 countries at grade 4 and in 34 countries at grade 8 . TIMSS Advanced data were also collected by 9 countries from students in their final year of secondary school (in the United States, 12th-graders). At grades 4 and 8, in addition to countries, a number of subnational entities also participated in TIMSS as separate education systems. Examples of subnational participants include the cities of Hong Kong and Chinese Taipei, the U.S. state of Florida, the Canadian provinces of Ontario and Quebec, England and Northern Ireland within the United Kingdom, and the Flemish community in Belgium. In the following paragraphs, comparisons of the United States to other countries do not include the subnational participants. Results for Florida are based on public school students only, while U.S. national results are based on both public and private school students. TIMSS is curriculum based, and the assessments of fourthand eighth-graders measure what students have actually learned against the subject matter that is expected to be taught by the end of grades 4 and 8 , as described in the TIMSS mathematics and science frameworks, which guide assessment development. TIMSS Advanced is designed to broadly align with the advanced mathematics and physics curricula in the participating countries. At all three grades, TIMSS scores are reported on a scale of 0 to 1,000 , with a fixed scale centerpoint of 500 .

In 2015, the average mathematics scores of U.S. fourthgraders (539) and eighth-graders (518) were higher than the TIMSS centerpoint of 500 (tables 602.20 and 602.30). The average U.S. fourth-grade mathematics score was higher than the average score in 30 of the 42 other countries participating at grade 4 , lower than the average score in 6 countries, and not measurably different from the average score in
the remaining 6 countries (table 602.20 ). The 6 countries that outperformed the United States in fourth-grade mathematics were Ireland, Japan, the Republic of Korea, Norway, the Russian Federation, and Singapore. At grade 8, the average U.S. mathematics score was higher than the average score in 21 of the 33 other participating countries, lower than the average score in 5 countries, and not measurably different from the average score in the remaining 7 countries (table 602.30). The 5 countries that outperformed the United States in eighth-grade mathematics were Canada, Japan, the Republic of Korea, the Russian Federation, and Singapore.

Florida, the only U.S. state participating in the 2015 TIMSS as a separate education system, had an average mathematics score for public schools at grade 4 (546) that was higher than the TIMSS centerpoint but was not measurably different from the U.S. national average in mathematics (table 602.20). At grade 8, Florida had a public school average score (493) that was not measurably different from the TIMSS scale average but was lower than the U.S. national average in mathematics (table 602.30).

The average science scores of both U.S. fourth-graders (546) and U.S. eighth-graders (530) were higher than the TIMSS scale centerpoint of 500 in 2015 (tables 602.20 and 602.30). The average U.S. fourth-grade science score was higher than the average score in 30 of the 41 other countries participating in the science assessment at grade 4 , lower than the average score in 5 countries, and not measurably different from the average score in the remaining 6 countries (table 602.20). The 5 countries that outperformed the United States in fourth-grade science were Finland, Japan, the Republic of Korea, the Russian Federation, and Singapore. At grade 8, the average U.S. science score was higher than the average score in 23 of the 33 other participating countries in 2015, lower than the average score in 5 countries, and not measurably different from the average score in the remaining 5 countries (table 602.30). The 5 countries that outperformed the United States in eighth-grade science were Japan, the Republic of Korea, the Russian Federation, Singapore, and Slovenia.

Public schools in Florida had an average fourth-grade science score (549) that was higher than the TIMSS scale centerpoint but was not measurably different from the U.S. national average (table 602.20). At grade 8, Florida had a public school average score (508) that was not measurably different from the TIMSS scale centerpoint but was lower than the U.S. national average in science (table 602.30).

The TIMSS Advanced assessment measures the advanced mathematics and physics achievement of students in their final year of secondary school who are taking or have taken advanced courses (table 602.35). In TIMSS Advanced, the U.S. average advanced mathematics score (485) and physics score (437) in 2015 were lower than the TIMSS Advanced scale centerpoint of 500.

## Reading Literacy at Grade 4

The Progress in International Reading Literacy Study (PIRLS) has conducted international assessments of fourthgrade reading literacy in 2001, 2006, and 2011. In 2011, PIRLS participants consisted of 40 countries as well as a number of subnational education systems. Examples of subnational participants include the cities of Hong Kong and Taipei, the public school system of the U.S. state of Florida, several Canadian provinces, Northern Ireland and England within the United Kingdom, and the Flemish community in Belgium. PIRLS scores are reported on a scale from 0 to 1,000 , with the scale average set at 500 .

On the 2011 PIRLS, U.S. fourth-graders had an average reading literacy score of 556 (table 602.10). The U.S. average score in 2011 was 14 points higher than in 2001 and 16 points higher than in 2006. In all 3 assessment years, the U.S. average score was higher than the PIRLS scale average.

In 2011, the average reading literacy score of fourthgraders in the United States was higher than the average score in 33 of the 39 other participating countries, lower than the average score in 3 countries, and not measurably different from the average in the remaining 3 countries. The 3 countries that outperformed the United States on the 2011 PIRLS were the Russian Federation, Finland, and Singapore. Public school students in Florida scored higher than both the PIRLS scale average and the U.S. national average.

In the United States, the 2011 average reading literacy score for females (562) was higher than the average score for males (551). In 34 of the 39 other participating countries, the average score for females was also higher than the average score for males, while there was no measurable difference between females' and males' average scores in the remaining 5 countries.

## Reading, Mathematics, and Science Literacy at Age 15

The Program for International Student Assessment (PISA) assesses 15 -year-old students' application of reading, mathematics, and science literacy to problems within a real-life context. In 2015, PISA assessed students in the 35 OECD countries as well as in a number of other education systems. Some subnational entities participated as separate education systems, including the U.S. states of Massachusetts and North Carolina. Results for individual U.S. states are based on public school students only, while U.S. national results are based on both public and private school students. PISA scores are reported on a scale of 0 to 1,000 .

On the 2015 PISA assessment, U.S. 15-year-olds' average score in reading literacy was 497, which was not measurably different from the OECD average of 493 (table 602.50). The average reading literacy score in the United States was lower than the average score in 11 of the 34 other OECD countries, higher than the average score in 13 of the other OECD countries, and not measurably different from the average score in 10 of the OECD countries. The average
reading literacy score of public school students in Massachusetts (527) was higher than both the U.S. average and the OECD average, while the average score in North Carolina (500) was not measurably different from either the U.S. average or the OECD average. In all participating education systems, females outperformed males in reading literacy (table 602.40). The U.S. gender gap in reading (20 points) was not measurably different from the OECD average gap but was smaller than the gaps in 12 other OECD countries.

In mathematics literacy, U.S. 15-year-olds' average score of 470 on the 2015 PISA assessment was lower than the OECD average score of 490 (table 602.60). The average mathematics literacy score in the United States was lower than the average in 27 of the 34 other OECD countries, higher than the average in 4 OECD countries, and not measurably different from the average in 3 OECD countries. The average mathematics literacy score of public school students in Massachusetts (500) was higher than the U.S. average but was not measurably different from the OECD average, while the average score in North Carolina (471) was not measurably different from the U.S. average but was lower than the OECD average. In 18 OECD countries, including the United States, males outperformed females in mathematics literacy (table 602.40). The U.S. gender gap in favor of males in mathematics ( 9 points) was not measurably different from the OECD average gap.

In science literacy, U.S. 15-year-olds' average score of 496 on the 2015 PISA assessment was not measurably different from the OECD average score of 493 (table 602.70). The average science literacy score in the United States was lower than the average in 12 OECD countries, higher than the average in 10 OECD countries, and not measurably different from the average in 12 OECD countries. The average science literacy score of public school students in Massachusetts (529) was higher than both the U.S. average and the OECD average. The average score in North Carolina (502) was not measurably different from either the U.S. average or the OECD average. In 15 OECD countries, including the United States, males outperformed females in science literacy. In 4 OECD countries, females outperformed males in science literacy. The U.S. gender gap in favor of males in science (7 points) was not measurably different from the OECD average gap.

## Educational Attainment

In 2015, the percentage of 25- to 64-year-olds who had completed high school varied among reporting OECD countries (table 603.10). ${ }^{1}$ The OECD country reporting the highest percentage of 25- to 64-year-olds who had completed high school was the Czech Republic (93 percent), followed by Estonia, Poland, and the Slovak Republic (all at 91 per-

[^140]cent). High school completers made up 90 percent of 25 - to 64 -year-olds in 2 OECD countries (Canada and the United States), and 12 OECD countries reported that high school completers made up 80 to 88 percent of 25 - to 64 -year-olds. The OECD country reporting the lowest percentage of high school completers among 25- to 64-year-olds was Mexico ( 36 percent), followed by Turkey ( 37 percent) and then Portugal (45 percent).

In 2015, the percentage of 25 - to 64 -year-olds with a postsecondary degree (i.e., any degree at the associate's level or above) also varied among OECD countries reporting data for this level of educational attainment (table 603.20). ${ }^{2}$ The OECD country reporting the highest percentage of 25to 64-year-olds with a postsecondary degree was Canada (55 percent), followed by Japan ( 50 percent), the Republic of Korea ( 45 percent), and the United States ( 45 percent). An additional 12 OECD countries reported that more than 35 percent of their 25- to 64-year-olds had a postsecondary degree. The OECD country reporting the lowest percentage of 25- to 64 -year-olds with a postsecondary degree was Mexico (16 percent), followed by Italy and Turkey (both at 18 percent).

Among younger adults (those 25 to 34 years old) in reporting OECD countries, the percentage with a postsecondary degree also varied in 2015 (table 603.20 and figure 28). The OECD country reporting the highest percentage of younger adults with a postsecondary degree was the Republic of Korea ( 69 percent), followed by Japan ( 60 percent) and Canada (59 percent). More than 35 percent of younger adults had a postsecondary degree in 21 additional countries, including the United States ( 47 percent). The OECD country reporting the lowest percentage of younger adults with a degree in 2015 was Mexico ( 21 percent), followed by Italy ( 25 percent) and Turkey ( 28 percent).

## Degrees

In 2014, more than half of all postsecondary degrees (i.e., all degrees at the associate's level or above) were awarded to women in 23 of the 25 OECD countries reporting a total percentage awarded to women that included degrees across all fields (web-only table 603.60). However, the percentage of degrees awarded to women varied by field. For example, in 29 of the 32 countries reporting 2014 data for the field of education, at least 70 percent of education degrees were awarded to women. In contrast, in 14 of the 32 countries reporting 2014 data for the combined field of engineering, manufacturing, and construction, less than 25 percent of these degrees were awarded to women.

The percentages of bachelor's degrees that were awarded in mathematics, science, and engineering fields-including life science, physical science, mathematics and statistics,

[^141]computer science, engineering, manufacturing, and con-struction-varied across the 33 OECD countries that reported these data for 2014 (web-only table 603.70). Two of the reporting OECD countries awarded 30 percent or more of their bachelor's degrees in mathematics, science, and engineering fields in 2014: Germany ( 36 percent) and the Republic of Korea ( 33 percent). Two countries awarded less than 15 percent of their bachelor's degrees in mathematics, science, and engineering fields: the Netherlands (14 percent) and Norway (13 percent). In 2014, the United States awarded 18 percent of its bachelor's degrees in mathematics, science, and engineering fields, a lower percentage than most other reporting OECD countries.

The percentages of graduate degrees awarded in mathematics, science, and engineering fields varied widely across OECD countries in 2014. In most of the 33 OECD countries that reported 2014 data, a higher percentage of degrees were awarded in these fields at the doctoral level than at the master's level. At the master's level, 3 of the reporting OECD countries awarded 30 percent or more of their degrees in mathematics, science, and engineering fields in 2014: Japan (42 percent), Germany ( 32 percent), and Sweden (30 percent). Seven reporting OECD countries awarded 15 percent or less of their master's degrees in these fields: Turkey ( 15 percent), the Netherlands (14 percent), the United States (13 percent), Israel (11 percent), Mexico (11 percent), Luxembourg ( 11 percent), and Chile ( 6 percent). At the doctoral level, 5 of the reporting OECD countries awarded more than half of their degrees in mathematics, science, and engineering fields: France ( 61 percent), Israel ( 58 percent), Estonia ( 54 percent), Chile ( 51 percent), and Sweden ( 50 percent). The only OECD country that reported awarding less than 30 percent of its doctor's degrees in mathematics, science, and engineering fields was Mexico ( 28 percent). The United States awarded 42 percent of its doctor's degrees in mathematics, science, and engineering fields in 2014, which was lower than the OECD average of 44 percent.

## Skills of Adults

The Program for the International Assessment of Adult Competencies (PIAAC) assesses the cognitive skills of adults in three areas-literacy, numeracy, and problem solving in technology-rich environments-that are seen as key to facilitating the social and economic participation of adults in advanced economies. The discussion below focuses on the areas of literacy and numeracy. PIAAC 2012 results are available for adults in 24 participating countries and regions, including 22 that belong to the OECD. Participating countries and regions are referred to collectively as "education systems" in the Digest. The education systems that participated in the 2012 assessment were primarily countries, but also included three subnational education systems: Northern Ireland and England within the United Kingdom, and the Flemish community in Belgium. PIAAC literacy and numeracy scores are reported on a scale of 0 to 500 .

In 2012, average scores on the PIAAC literacy scale for adults ages 25 to 65 ranged from 249 in Italy and 250 in Spain to 296 in Japan (table 604.10). U.S. 25- to 65 -yearolds had an average PIAAC literacy score of 269 , which was not measurably different from the OECD average score of 271. Across education systems, adults' average literacy scores generally increased with higher levels of educational attainment. In the United States, for example, 25- to 65-yearolds whose highest level of attainment was high school completion had an average literacy score of 259 , compared with an average score of 302 for those who had a bachelor's or higher degree. The literacy score for U.S. high school completers in the 25 - to 65 -year-old age group was lower than the OECD average of 268 for high school completers in this age group, while the literacy score for U.S. 25- to 65 -yearolds with a bachelor's or higher degree was not measurably different from the OECD average of 302 for those with a bachelor's or higher degree.

On the PIAAC numeracy scale, 2012 average scores for adults ages 25 to 65 ranged from 245 in Spain and 246 in Italy to 289 in Japan. U.S. 25- to 65 -year-olds had an average PIAAC numeracy score of 254 , which was lower than the OECD average score of 268. Across education systems, adults’ average numeracy scores generally increased with higher levels of educational attainment. In the United States, for example, 25- to 65 -year-olds whose highest level of attainment was high school completion had an average numeracy score of 241 , compared with an average score of 293 for those who had a bachelor's or higher degree. The numeracy score for U.S. 25- to 65-year-olds who had completed only high school was lower than the OECD average of 265 for those with the same level of educational attainment. Likewise, the average numeracy score of U.S. 25- to 65-year-olds with a bachelor's or higher degree was lower than the OECD average of 303 for those with a bachelor's or higher degree.

## Finances

In 2013, expenditures per full-time-equivalent (FTE) student (expressed in current U.S. dollars) varied by level of education and across OECD countries. At the combined elementary and secondary level of education, expenditures per FTE student were $\$ 11,800$ in the United States, which was higher than the OECD average of $\$ 9,200$ (table 605.10). In addition to the United States, 7 of the other OECD countries that reported finance data for this level of education had expenditures of at least $\$ 11,000$ per FTE student in 2013. Specifically, Luxembourg spent $\$ 19,500$ per elementary/secondary student; Switzerland spent $\$ 17,700$; Norway spent \$14,300; Austria spent $\$ 13,300$; Belgium spent $\$ 11,600$; the United Kingdom spent $\$ 11,500$; and Denmark spent $\$ 11,100$. At the higher education level, the United States spent \$27,900 per FTE student in 2013, which was higher than the OECD average of $\$ 14,800$. In addition to the United States, 8 of the other countries that reported higher education finance data had expenditures of over $\$ 17,000$ per FTE student at the
higher education level in 2013: the United Kingdom (\$25,700), Switzerland (\$25,100), Sweden (\$23,200), Norway $(\$ 20,400)$, the Netherlands $(\$ 18,900)$, Australia $(\$ 18,300)$, Finland ( $\$ 17,900$ ), and Japan ( $\$ 17,900$ ). These expenditures were adjusted to U.S. dollars using the purchas-ing-power-parity (PPP) index. This index is considered more stable and comparable than indexes using currency exchange rates; for more information, see appendix B.

Total public and private direct expenditures on all education levels as a percentage of gross domestic product (GDP) varied across the 33 reporting OECD countries in 2013,
ranging from 3.5 percent in Luxembourg to 6.7 percent in the United Kingdom (table 605.20 and figure 29). In the United States, total direct expenditures on education amounted to 6.2 percent of GDP, which higher than the OECD average of 5.2 percent of GDP. A comparison of public direct expenditures on education as a percentage of GDP shows that public investment in education in 2013 ranged from 3.1 percent in Hungary to 6.2 percent in Norway. In the United States, the public direct expenditure on education as a percentage of GDP was 4.2 percent, which was slightly lower than the OECD average of 4.3 percent of GDP.

Figure 27. Percentage change in enrollment, by major areas of the world and level of education: 2000 to 2014
Percent change

NOTE: Europe includes all countries of the former Union of Soviet Socialist Republics (U.S.S.R.) except Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan, which are included in Asia. Asia also includes Turkey, the Arab states (except those located in Africa), and Israel. Central and South America includes Latin America and the Caribbean. Northern America includes Bermuda, Canada, Greenland, St. Pierre and Miquelon, and the United States. Data include imputed values for nonrespondent countries. Graphic display was generated using unrounded data.
Graphic display was generated using unrounded data. Base (April 2017).

Figure 28. Percentage of the population 25 to 34 years old with an associate's or higher degree, by OECD country: 2015

${ }^{1}$ Data include postsecondary non-higher-education.
NOTE: All data in this figure were calculated using International Standard Classification of Education (ISCED) 2011. The data refer to total tertiary degrees, which correspond to all degrees at the associate's level and above in the United States and include the following ISCED 2011 levels: level 5 (corresponding to the associate's degree in the United States), level 6 (bachelor's or equivalent degree), level 7 (master's or equivalent degree), and level 8 (doctoral or equivalent degree). Graphic display was generated using unrounded data.

## -Not available.

${ }^{1}$ The world total includes estimations for missing data on teachers.
${ }^{2}$ Enrollment and teacher data for the world total and Asia exclude Taiwan.
${ }^{3}$ Europe includes all countries of the former Union of Soviet Socialist Republics (U.S.S.R.) except Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan, which are included in Asia. Asia also includes Turkey, the Arab states (except those located in Africa), and Israel.
${ }^{4}$ Central and South America includes Latin America and the Caribbean. Northern America includes Bermuda, Canada, Greenland, St. Pierre and Miquelon, and the United States. ${ }^{5}$ Estimate of midyear population.
${ }^{6}$ This level generally corresponds to grades 1-6 in the United States.

Includes general education, teacher training (at the secondary level), and technical and vocational education. This level generally corresponds to grades 7-12 in the United States. ${ }^{8}$ Includes college and university enrollment, and technical and vocational education beyond the secondary level.
NOTE: Detail may not sum to totals because of rounding and missing teacher data. Data include imputed values for nonrespondent countries. Enrollment and teacher data exclude several island countries or territories with small populations (less than 150,000). Some data have been revised from previously published figures.

-Not available.
${ }^{1}$ Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries, to which each country reporting data contributes equally. The average includes all current OECD countries for which a given year's data are available, even if they were not members of OECD in that year.
${ }^{2}$ Excludes the German-speaking Community of Belgium.
${ }^{3}$ Percentage suppressed due to apparent data quality or comparability issues.
NOTE: For each country, this table shows the number of persons in each age group who are enrolled in that country as a percentage of that country's total population in the specified age group. However, some of a country's population may be enrolled in a different country, and
some persons enrolled in the country may be residents of a different country. Enrollment rates may be underestimated for countries such as Luxembourg that are net exporters of students and may be overestimated for countries that are net importers. If a country enrolls many residents of other countries, the country's total population in the specified age group can be smaller than the total number enrolled, resulting in enrollment estimates exceeding 100 percent. Some data have been revised from previously published figures.
SOURCE: Organization for Economic Cooperation and Development (OECD), Education at a Glance, 2002 through 2016; and Online Education Database, retrieved October 7, 2016, from http://stats.oecd.org/Index.aspx. (This table was prepared October 2016.)

Table 601.40. Percentage of 15- to 29-year-olds enrolled in school, by selected levels of education, age, and country: 2014

## 一Not available. <br> \#Rounds to zero

In addition to secondary and tertiary education, may include enrollment in the following Inter national Standard Classification of Education (ISCED) 2011 education levels that are no shown separately: level 1 (primary or elementary education) and level 4 (nontertiary education that typically corresponds to postsecondary vocational programs below the associate's degree level in the United States).
${ }^{2}$ Refers to ISCED 2011 level 2 (lower secondary education) and level 3 (upper secondary education). Secondary education generally corresponds to grades 7-12 in the United States Total tertiary education corresponds to all postsecondary programs leading to associate's and higher degrees in the United States. Tertiary education includes ISCED 2011 level 5 (corresponding to U.S. programs at the associate's degree level), level 6 (bachelor's or equiv alent level), level 7 (master's or equivalent level), and level 8 (doctoral or equivalent level) Enrollment rates may not be directly comparable across countries due to differing definitions of tertiary education and the age at which it begins.

Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries, to which each country reporting data contributes equally. ${ }^{5}$ Data are for 2013 instead of 2014.
NOTE: For each country, this table shows the number of persons at a given age who are enrolled in that country as a percentage of that country's total population at the specified age. If a country enrolls many residents of other countries, the country's total population at the specified age can be smaller than the total number enrolled, resulting in enrollment estimates exceeding 100 percent. Conversely, if a country has many residents who are enrolled outside of the country, the country's enroliment rates may be underestimated. Enroliment estimates can also be affected if population and enrollment data were collected at different times. ncludes both full-time and part-time students.

-Not available.
$\dagger$ Not applicable. This level of education not part of the national education structure; students in the age group normally associated with this education level were reported in other levels.
Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries, to which each country reporting data contributes equally. The average includes all current OECD countries for which a given year's data are available, even if they were not members of OECD in that year. However, if data were reported for less than 75 percent of the countries, the average for that year is omitted
Includes only general programs
${ }^{4}$ Includes preprimary data.
Excludes independent private institutions.
Includes postsecondary non-higher-education institutions.
Includes elementary school data.
Includes occupation-specific education corresponding to that offered at the vocational associate's degree level in the United States Includes data on management personnel.
${ }^{10}$ Public institutions only
Based on a head count of teachers, rather than full-time equivalents.
${ }^{12}$ Data from 1999 reported for 2000.
14Includes senior high school data.
${ }^{14}$ Includes senior high school data
${ }^{15}$ Excludes general programs.
${ }^{16}$ Excludes part-time personnel in public institutions.
NOTE: The pupil/teacher ratio is the number of full-time-equivalent students divided by the number of full-time-equivalent teachers,
including teachers for students with including teachers for students with disabilities and other special teachers. Data for 2012 and earlier years were calculated using the
International Standard Classification of Education (ISCED) 199 . Niternational Standard Classification of Education (ISCED) 1997. Data for 2013 and 2014 used the ISCED 2011 classification and
may not be comparable to data for earlier years. In this table, elementary school corresponds to ISCED 1997 and ISCED 2011 level 1 (U.S. grades 1 through 6), junior high school corresponds to ISCED 1997 and ISCED 2011 level 2 (U.S. grades 7 through 9), and senior high school corresponds to ISCED 1997 and ISCED 2011 level 3 (U.S. grades 10 through 12).

-Not available.
$\dagger$ Not applicable according to the Organization for Economic Cooperation and Development (OECD).
${ }^{1}$ General programs only.
${ }^{2}$ Refers to the mean of the data values for all reporting OECD countries, to which each country or
country component reporting data contributes equally.
${ }^{3}$ Typical teaching time reported.
${ }^{4}$ Maximum teaching time reported.
${ }^{5}$ Actual teaching time reported.
${ }^{6}$ For senior high school, data are for 2015 instead of 2014.

Minimum teaching time reported.
${ }^{\text {D D }}$ Data for government-dependent private institutions are included.
${ }^{9}$ For net teaching time, data are for 2013 instead of 2014. For working time, data are for 2012 instead of 2014.
NOTE: In this table, elementary school corresponds to International Standard Classification of
Education (ISCED) 2011 level 1 (U.S. grades 1 through 6), junior high school corresponds to
ISCED 2011 level 2 (U.S. grades 7 through 9), and senior high school corresponds to ISCED
2011 level 3 (U.S. grades 10 through 12).

[^144]at the international level. "Benchmarking" education systems are not members of the IEA and are therefore not included in the average.
${ }^{5}$ Exclusion rates for Azerbaijan and Georgia are slightly underestimated as some conflict zones were not covered and no official statistics were available for 2011.
${ }^{6}$ National Defined Population covers 90 percent to 95 percent of National Target Population. ${ }^{7}$ Met guidelines for sample participation rates only after replacement schools were included ${ }^{8}$ National Target Population does not include all of the International Target Population.
National Defined Population covers less than 90 percent of National Target Population.
${ }^{10}$ National Defined Population covers less than 80 percent of National Target Population.
${ }^{11}$ Nearly satisfied guidelines for sample participation rates after replacement schools were included. ${ }^{12}$ The TIMSS \& PIRLS International Study Center has reservations about the reliability of the average achievement score because the percentage of students with achievement too low for estimation exceeds 25 percent.
${ }^{13}$ Data are available for at least 70 percent but less than 85 percent of students.
${ }^{14}$ The TIMSS \& PIRLS International Study Center has reservations about the reliability of the average achievement score because the percentage of students with achievement too low for estimation exceeds 15 percent, though it is less than 25 percent.
${ }^{15} \mathrm{All}$ data for Florida are based on public schools only.
SOURCE: International Association for the Evaluation of Educational Achievement (IEA), Progress in International Reading Literacy Study (PIRLS), 2001, 2006, and 2011. (This table was prepared February 2013).

Table 602.20. Average fourth-grade scores and annual instructional time in mathematics and science, by country or other education system: 2015

## -Not available.

## $\dagger$ Not applicable.

\#Rounds to zero
$\ddagger$ Reporting standards not met. Either data are available for less than 50 percent of students or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Most of the education systems represent complete countries, but some represent subnational entities; examples include the Flemish community of Belgium, two components of the United Kingdom (England and Northern Ireland), a few individual cities (such as Abu Dhab within the United Arab Emirates), and the U.S. state of Florida.
${ }^{2}$ Trends in International Mathematics and Science Study (TIMSS) scores are reported on a scale from 0 to 1,000, with the scale centerpoint set at 500 and the standard deviation set at 100 .
${ }^{3}$ The international average includes only education systems that are members of the International Association for the Evaluation of Educational Achievement (IEA), which develops and implements TIMSS at the international level. "Benchmarking" education systems are not members of the IEA and are therefore not included in the average
${ }^{4}$ Data are available for at least 70 percent but less than 85 percent of students.
${ }^{5}$ National Defined Population covers 90 to 95 percent of National Target Population
${ }^{6}$ Met guidelines for sample participation rates only after replacement schools were included.
${ }^{7}$ Data for Canada include only students from the provinces of Alberta, Manitoba, Newfoundland Ontario, and Quebec.
${ }^{8}$ National Target Population does not include all of the International Target Population.
${ }^{9}$ Data are available for at least 50 percent but less than 70 percent of students.
${ }^{10}$ The TIMSS \& PIRLS International Study Center has reservations about the reliability of the average achievement score because the percentage of students with achievement too low for estimation exceeds 15 percent, though it is less than 25 percent.
${ }^{11}$ Nearly satisfied guidelines for sample participation rates after replacement schools were included.
${ }^{12}$ Norway collected data from students in their fifth year of schooling rather than in grade 4 because year 1 in Norway is considered the equivalent of kindergarten rather than the first year of primary school.
${ }^{13}$ National Defined Population covers less than 90 percent of National Target Population (but at least 77 percent)
${ }^{14}$ U.S. state-level data are based on public school students only.
${ }^{15}$ Did not satisfy guidelines for sample participation rates.
NOTE: Countries and other education systems were required to draw probability samples of students who were nearing the end of their fourth year of formal schooling (counting the first year of primary school as year 1), provided that the mean age at the time of testing was at east 9.5 years. Instructional times shown in this table are actual or implemented times (as opposed to intended times prescribed by the curriculum). Principals reported total instructional hours per day and school days per year. Total instructional hours per year were calculated by multiplying the number of school days per year by the number of instructional hours per day. Teachers reported instructional hours per week in mathematics and science. Instructional hours per year in mathematics and science were calculated by dividing weekly instructional hours by the number of school days per week and then multiplying by the number of school days per year.
SOURCE: International Association for the Evaluation of Educational Achievement (IEA), Trends in International Mathematics and Science Study (TIMSS), 2015; International Results in Mathematics and Science, retrieved from Boston College, TIMSS \& PIRLS International Study Center website (http://timssandpirls.bc.edu/timss2015/international-results/). (This table was prepared December 2016.)

Table 602.30. Average eighth-grade scores and annual instructional time in mathematics and science, by country or other education system: 2015 [Standard errors appear in parentheses]

## -Not available. <br> $\dagger$ Not applicable.

\#Rounds to zero.
$\ddagger$ Reporting standards not met. Either data are available for less than 50 percent of the students or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Most of the education systems represent complete countries, but some represent subnationa entities; examples include two Canadian provinces (Ontario and Quebec), a component of the United Kingdom (England), the U.S. state of Florida, and a few individual cities (such as Abu Dhabi within the United Arab Emirates).
${ }^{2}$ Trends in International Mathematics and Science Study (TIMSS) scores are reported on a scale from 0 to 1,000, with the scale centerpoint set at 500 and the standard deviation set at 100.
${ }^{3}$ General/integrated science instructional time is shown for the 27 participating countries that teach science as a general or integrated subject at eighth grade. For the 10 participating countries that teach the sciences as separate subjects (biology, chemistry, etc.) at eighth grade, total instructional time across science subjects is shown.
${ }^{4}$ The international average includes only education systems that are members of the International Association for the Evaluation of Educational Achievement (IEA), which develops and implements TIMSS at the international level. "Benchmarking" education systems are not members of the IEA and are therefore not included in the average.
${ }^{5}$ Data are available for at least 70 percent but less than 85 percent of students.
${ }^{6}$ Data are available for at least 50 percent but less than 70 percent of students.
${ }^{7}$ Data for Canada include only students from the provinces of Manitoba, Newfoundland, Ontario, and Quebec.
${ }^{8}$ National Target Population does not include all of the International Target Population.
${ }^{9}$ Met guidelines for sample participation rates only after replacement schools were included.
${ }^{10}$ The TIMSS \& PIRLS International Study Center has reservations about the reliability of the average achievement score because the percentage of students with achievement too low for estimation exceeds 15 percent, though it is less than 25 percent.
${ }^{11}$ National Defined Population covers 90 to 95 percent of National Target Population.
${ }^{12}$ National Defined Population covers less than 90 percent of the National Target Population (but at least 77 percent).
${ }^{13}$ The TIMSS \& PIRLS International Study Center has reservations about the reliability of the average achievement score because the percentage of students with achievement too low for estimation exceeds 25 percent.
${ }^{14}$ Norway collected data from students in their ninth year of schooling rather than in grade 8 because year 1 in Norway is considered the equivalent of kindergarten rather than the first year of primary school.
${ }^{15}$ U.S. state-level data are based on public school students only.
${ }^{16}$ Did not satisfy guidelines for sample participation rates.
NOTE: Countries and other education systems were required to draw probability samples of students who were nearing the end of their eighth year of formal schooling (counting the first year of primary school as year 1), provided that the mean age at the time of testing was at least 13.5 years. Instructional times shown in this table are actual or implemented times (as opposed to intended times prescribed by the curriculum). Principals reported total instructional hours per day and school days per year. Total instructional hours per year were calculated by multiplying the number of school days per year by the number of instructional hours per day. Teachers reported instructional hours per week in mathematics and science. Instructional hours per year in mathematics and science were calculated by dividing weekly instructional hours by the number of school days per week and then multiplying by the number of school days per year.

## $\dagger$ Not applicable

$\ddagger$ Reporting standards not met．Either there are too few cases for a reliable estimate or the coefficient of variation（CV）is 50 percent or greater．
Most of the education systems represent complete countries，but some represent subnational entities；examples include two Canadian provinces（Ontario and Quebec），a component of the United Kingdom（England），the U．S．state of Florida，and a Teachers were asked how Abu Dhabi within the United Arab Emirates），
explore mathematics principles and concepts；practice skills and procedures；look up ideas and information；and process and ana－ lyze data．The overall frequency of computer use corresponds to the highest frequency reported for any one of these activities． ${ }^{3}$ The total of all students who have computers available during lessons includes students for whom data on the specific type of computer access is missing．Their teachers indicated that computers were available to students during lessons，but either failed to answer the three follow－up questions about specific type of computer access or answered＂No＂to each of the three
types of access．Among sampled students with computers available during mathematics lessons， 4 percent are missing data types of access．Among sampled students with computers available during mathematics lessons， 4 percent are missing data
on the type of computer access；however，the percentage varies widely by country（from 0 to 33 percent）．These students are included in the total shown in column 4，but are not included in columns 5 through 7 ． Trends in International Mathematics and Science Study（TIMSS）scores are reported scale centerpoint set at 500 and the standard deviation set at 100 ．
The international average includes only education systems that are members of the International Association for the Evalua－ tion of Educational Achievement（IEA），which develops and implements TIMSS at the international level．＂Benchmarking＂ education systems are not members of the IEA and are therefore not included in the average．
${ }^{6}$ Data for Canada include only students from the provinces of Manitoba，Newfoundland，Ontario，and Quebec ${ }^{7}$ National Target Population does not include all of the International Target Population．
${ }^{8}$ Met guidelines for sample participation rates only after replacement schools were included．
${ }^{9}$ The TIMSS \＆PIRLS International Study Center has reservations about the reliability of the average achievement score because the percentage of students with achievement too low for estimation exceeds 15 percent，though it is less than 25 percent． ${ }^{10}$ National Defined Population covers 90 to 95 percent of National Target Population．
${ }^{12}$ The TIMSS \＆PIRLS International Study Center has reservations about the reliability of the at least 77 percent）． because the percentage of students with achievement too low for estimation exceeds 25 percent．
${ }^{13}$ Norway collected data from students in their ninth year of schooling rather than in grade 8 because year 1 in Norway is con－
sidered the equivalent of kindergarten rather than the first year of primary school．
${ }^{14}$ U．S．state－level data are based on public school students only
${ }^{15}$ Did not satisfy guidelines for sample participation rates．
NOT．Countries and other education systems were required to draw probability samples of students who were nearing the end of their eighth year of formal schooling（counting the first year of primary school as year 1），provided that the mean age at
the time of testing was at least 13.5 years．Detail may not sum to totals because of roundin SOURCE：International Association for the Evaluation of Educatiotals because of rounding and missing data and Science Study（TIMSS），2015．（This table was prepared January 2017．）

Table 602.33a. Average science score and percentage of eighth-graders, by access to the Internet at home, access to a computer or tablet at home or other place outside of school, frequency of computer or tablet use for schoolwork outside of school, and country or other education system: 2015
[Standard errors appear in parentheses]

$\dagger$ Not applicable.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Most of the education systems represent complete countries, but some represent subnational entities; examples include two Canadian provinces (Ontario and Quebec), a component of the United Kingdom (England), the U.S. state of Florida, and a few individual cities (such as Abu Dhabi within the United Arab Emirates).
outside of class)" in each of then they used a computer or tablet to do schoolwork "(including classroom tasks, homework, studying "Every day or almost every day," "Once or twice a week," "Once or twice a month," and "Never or almost never." If students had no access to a computer or tablet at home, and their frequency at "some other place" was at least "once or twice a month," they are classified as having access to a computer or tablet outside of school only at some other place.
${ }^{3}$ Trends in International Mathematics and Science Study (TIMSS) scores are reported on a scale from 0 to 1,000 , with the scale centerpoint set at 500 and the standard deviation set at 100 .
The international average includes only education systems that are members of the International Association for the Evaluation of Educational Achievement (IEA), which develops and implements TIMSS at the international level. "Benchmarking" education systems are not members of the IEA and are therefore not included in the average.
${ }^{5}$ Data for Canada include only students from the provinces of Manitoba, Newfoundland, Ontario, and Quebec.
${ }^{6}$ National Target Population does not include all of the International Target Population.
${ }^{7}$ Met guidelines for sample participation rates only after replacement schools were included.
${ }^{8}$ National Defined Population covers 90 to 95 percent of National Target Population.
${ }^{9}$ National Defined Population covers less than 90 percent of the National Target Population (but at least 77 percent).
${ }^{10}$ Norway collected data from students in their ninth year of schooling rather than in grade 8 because year 1 in Norway is considered the equivalent of kindergarten rather than the first year of primary school.
${ }^{11}$ U.S. state-level data are based on public school students only.
${ }^{12}$ Did not satisfy guidelines for sample participation rates.
NOTE: Countries and other education systems were required to draw probability samples of students who were nearing the end of their eighth year of formal schooling (counting the first year of primary school as year 1), provided that the mean age at the time of testing was at least 13.5 years. Detail may not sum to totals because of rounding. and Science Study (TIMSS), 2015. (This table was prepared January 2017.)

Table 602.33b. Average science score and percentage of eighth-graders, by science teachers' reports of student access to computers and frequency of computer use during science lessons and country or other education system: 2015
[Standard errors appear in parentheses]

See notes at end of table.

## Not applicable.

$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
Most of the education systems represent complete countries, but some represent subnational entities; examples include two Canadian provinces (Ontario and Quebec), a component of the United Kingdom (England), the U.S. state of Florida, and a都
tice skills and procedures; look up ideas and information; do science procedures or experiments; study natural phenomena through simulations; and process and analyze data. The overall frequency of computer use corresponds to the highest frequency reported for any one of these activities.
${ }^{3}$ The total of all students who have computers available during lessons includes students for whom data on the specific type of computer access is missing. Their teachers indicated that computers were available to students during lessons, but either failed to answer the three follow-up questions about specific type of computer access or answered "No" to each of the three
types of access. Among sampled students with computers available during science lessons, about 3 percent are missing data on the type of computer access; however, the percentage varies widely by country (from 0 to 28 percent). These students are included in the total shown in column 4 , but are not included in columns 5 through 7 .
${ }^{4}$ Trends in International Mathematics and Science Study (TIMSS) scores are reported on a scale from 0 to 1,000 , with the scale centerpoint set at 500 and the standard deviation set at 100 .
${ }^{5}$ The international average includes only education systems that are members of the International Association for the Evaluation of Educational Achievement (IEA), which develops and implements TIMSS at the international level. "Benchmarking" education systems are not members of the IEA and are therefore not included in the average.
${ }^{6}$ Data for Canada include only students from the provinces of Manitoba, Newfoundland, Ontario, and Quebec
${ }^{7}$ National Target Population does not include all of the International Target Population.
${ }^{8}$ Met guidelines for sample participation rates only after replacement schools were included.
${ }^{10}$ National Defined Population covers less than 90 percent of the National Target Po
${ }^{11}$ Norway collected data from students in their ninth year of schooling rather than in gradion (but at least 77 percent). sidered the equivalent of kindergarten rather than the first year of primary school.
${ }^{12}$ U.S. state-level data are based on public school students only
Did not satisty guidelines for sample participation rates.
NOTE: Countries and other education systems were required to draw probability samples of students who were nearing the end of their eighth year of formal schooling (counting the first year of primary school as year 1), provided that the mean age at SOURCE: International Association for the Evaluation of Educational Achievement and Science Study (TIMSS), 2015. (This table was prepared January 2017.)

Table 602.35. Average advanced mathematics and physics scores of high school seniors who had taken advanced courses in these subjects, seniors who had taken such courses as a percentage of their age cohort, and instructional time in such courses, by country: 2015
[Standard errors appear in parentheses]

## Not applicable.

${ }^{1}$ Because countries may have used two different school samples-one for advanced mathematics and one for physics-the total number of instructional hours per year for a particular country may be different in column 2 (based on the advanced mathematics sample) than in column 7 (based on the physics sample).
Trends in International Mathematics and Science Study (TIMSS) Advanced scores are reported on a scale from 0 to 1,000 , with the scale centerpoint set at 500 and the standard deviation set at 100 .
${ }^{3}$ Columns 4 and 9 show final-year secondary school students who have taken or are taking the specified courses as a percentage of the age cohort that corresponds to the final year of secondary school in their country. The age cohort represents the entire population of the country that is about the same age as the average age of final-year secondary students (approximately 18 or 19 years
old, depending on the country). In the United States, the cohort consists of the total population of 18 -year-olds. For the United States, therefore, columns 4 and 9 show the percentage of all 18 -year-olds who have taken the specified courses.
${ }^{4}$ Includes advanced mathematics courses covering topics in geometry, algebra, and calculus. In the United States, includes Advanced Placement (AP) calculus, International Baccalaureate (IB) mathematics, and state- and school-specific calculus courses. 5 Includes physics courses covering topics in mechanics and thermodynamics, electricity and magnetism, and wave phenomena and atomic/nuclear physics. In the United States, includes AP physics, IB physics, and state- and school-specific second-year
physics courses.
${ }^{6}$ The international average includes only education systems that are members of the International Association for the Evaluation of Educational Achievement (IAE), which develops and implements TIMSS at the international level. All nine of the education systems that participated in TIMSS Advanced are countries that are members of IAE
Data are available for at least 70 percent but less than 85 percent of students.
Did not satisfy guidelines for sample participation rates
9 Met guidelines for sample participation rates only after replacement schools were included.
${ }^{10}$ Intensive courses are advanced mathematics courses that involve 6 or more hours per week. Results for students in these courses are reported separately from the results for other students from the Russian Federation taking courses that involve 4.5 hours per week. ${ }^{11}$ Data are available for at least 50 percent but less than 70 percent of students.
States, samples of 12 th-graders were drawn. Instructional times shown in this table year of secondary school; in the United opposed to intended times prescribed by the curriculum). Principals reported total instructional hours per day and school days per year. Total instructional hours per year were calculated by multiplying the number of school days per year by the number of instructional hours per day. Teachers reported instructional hours per week in advanced mathematics and physics. Instructional hours per year in advanced mathematics and physics were calculated by dividing weekly instructional hours by the number of
school days per week and then multiplying by the number of school days per year school days per week and then multiplying by the number of school days per year.
Science Study (TIMSS) Al

${ }^{1}$ Refers to the mean of the data values for all Organization for Economic Cooperation and
Development (OECD) countries, to which each country contributes equally regardless of the
absolute size of the student population of each country.
${ }^{2}$ Results are for public school students only.

NOTE: Program for International Student Assessment (PISA) scores are reported on a scale from 0 to 1,000.
SOURCE: Organization for Economic Cooperation and Development (OECD), Program for International Student Assessment (PISA), 2009, 2012, and 2015. (This table was prepared January 2017.)

!!nterpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent
$\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
${ }^{\text {Th }}$ To reach a particular proficiency level, a student must correctly answer a majority of items at that level. Students were classified into reading literacy levels according to their scores. Exact cut scores are as follows: below level 1b (a score less than 262.04); level 1 b (a score of at least 262.04 but less than 334.75 ); level 1 a (a score of at least 334.75 but less than 407.47 ). level 2 (a score of at least
407.47 but less than 480.18 ); level 3 (a score of at least 480.18 but less than 552.89 ); level 4 (a score of at least 552.89 but less than 625.61 ); level 5 (a score of at least 625.61 but less than 698.32 ); and level 6 (a score of at least 698.32 ),
(OECD) countries, to which ${ }^{4}$ Results are for public school students only.
NOTE: Detail may not sum to totals because of rounding.

Rounds to zero.
Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater
${ }^{1}$ Program for International Student Assessment (PISA) scores are reported on a scale from 0 to 1,000 .
To reach a particular proficiency level, a student must correctly answer a majority of items at that level. Students were classified into
mathematics literacy levels according to their scores. Exact cut scores are as follows: below level 1 ( a score less than 357.77 ); level 1
(a score of at least 357.77 but less than 420.07 ); level 2 (a score of at least 420.07 but less than 482.38) : level 3 (a score of at least
482.38 but less than 544.68 ); level 4 (a score of at least 544.68 but less than 606.99 ); level 5 (a score of at least 606.99 but less than 669.30 ); and level 6 (a score of at least 669.30 ).
${ }^{3}$ Refers to the mean of the data values for all Organization for Economic Cooperation and Development (OECD) countries, to which each country contributes equally, regardless of the absolute size of the student population of each country,
Results are for public school students only.

## Not applicable <br> or applable.

Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percen
$\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater.
To reach a particular proficidey level, a stud (PISA) scores are reported on a scale from 0 to 1,000 . Students were classified into science literacy levels according to their scores) Exact cut scores are as follows: below level 1 b (a score less than 260.54 ); level 1 l (a
score of at least 260.54 but less than 334 44); level 1 a (a score of at least 334.94 but less than 409.54 ); level 2 (a score of at least
409.54 but less than 484.14 ); level 3 (a score of at least 484.14 but less than 558.73 ); level 4 (a score of at least 558.73 but less than ${ }^{3}$ Refers to the 5 (ancore of at least 633.33 but less than 707.93 ); and level 6 (a score of at least 707.93). ${ }^{4}$ Results are for public school students only
NOTE: Detail may not sum to totals because of rounding.

${ }^{1}$ Most of the education systems represent complete countries, but some represent subnational entities; examples include the Flemish community of Belgium, two components of the United Kingdom (England and Northern Ireland), a few individual cities (such as Abu Dhabi within the United Arab Emirates), and the U.S. state of Florida.
${ }^{2}$ The international average includes only education systems that are members of the International Association for the Evaluation of Educational Achievement (IEA), which develops and implements the Trends in International Mathematics and Science Study (TIMSS) at the international level. In this table, the fourth-grade international average includes grade 5 data from South Africa, and the eighth-grade international average includes grade 9 data from Botswana; these IEA countries are not shown separately because they did not participate at the target grade levels. "Benchmarking" education systems are not members of the IEA and are therefore not included in the average.
${ }^{3}$ National Defined Population covers 90 to 95 percent of the National Target Population.
${ }^{4}$ Met guidelines for sample participation rates only after replacement schools were included. Fourth-grade data include only students from the provinces of Alberta, Manitoba, Newfoundland, Ontario, and Quebec. Eighth-grade data include only students from the provinces of Manitoba, Newfoundland, Ontario, and Quebec.
${ }^{6}$ National Target Population does not include all of the International Target Population.
${ }^{7}$ Data are available for at least 70 percent but less than 85 percent of the students.
${ }^{8}$ Nearly satisfied guidelines for sample participation rates after replacement schools were included.
${ }^{9}$ included.
${ }^{9}$ Norway collected data from students in their fifth and ninth year of schooling rather than in grades 4 and 8 because year 1 in Norway is considered the equivalent of kindergarten rather than the first year of primary school.
${ }^{10}$ National Defined Population covers less than 90 percent of the National Target Population (but at least 77 percent).
${ }^{11}$ U.S. state-level data are based on public school students only.
${ }^{12}$ Did not satisfy guidelines for sample participation rates.
NOTE: Students responded to a series of questions about different types of bullying, and their responses were collapsed into the single bullying frequency scale shown in this table. TIMSS required countries and other education systems to draw probability samples of students who were nearing the end of their fourth and eighth years of formal schooling (counting the first year of primary school as year 1), provided that the mean age at the time of testing was at least 9.5 years for fourth-year students and 13.5 years for eighth-year students. Detail may not sum to totals because of rounding.

## -Not available.

Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries, to which each country reporting data contributes equally. The average includes all current OECD countries for which a given year's data are available, even if they were not members of OECD in that year
Data in 2005 columns include some International Standard Classification of Education (ISCED) 3C short secondary programs.
Data from 2000 reported for 2001
Data from 2004 reported for 2005
Data from 2013 reported for 2012
Data in 2001 columns include some short secondary (ISCED 3C) programs.
Data for 2014 and 2015 include some persons who have completed a sufficient volume and standard of programs, any one of which individually would be classified as a program that only partially completes the high school (or upper secondary) level of education.

Data from 2009 reported for 2010
"Data from 2002 reported for 2001
NOTE: The International Standard Classification of Education (ISCED) was revised in 2011. The previous version, ISCED 1997, was used to calculate all data for years prior to 2014 (with the exception of China's 2010 data, which were calculated using ISCED 2011). ISCED 2011 was used to calculate all data for 2014 and later years (with the exception of 2014 data for the Rus-
sian Federation, Saudi Arabia, and South Africa, which were calculated using ISCED 1997). Data in this table refer to degrees sian Federation, Saudi Arabia, and South Africa, which were calculated using ISCED 1997). Data in this table refer to degrees
classified as ISCED level 3, which corresponds to high school completion in the United States, with the following exceptions: Programs classified under ISCED 1997 as level 3C short programs do not correspond to high school completion; these short programs are excluded from this table except where otherwise noted. Programs classified under ISCED 2011 as only partially completing level 3 are also excluded except where otherwise noted. Standard errors are not available for 2001 and 2005. Some data have been revised from previously published figures.

-Not available.
Not applicable.
1Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries, to which each country reporting data contributes equally. The average includes all current OECD countries for which a given year's data are available, even if they were not members of OECD in that year.
2Data from 2013 reported for 2014
Data from 2011 reported for 2012
${ }^{4}$ Data from 2004 reported for 2005
Data for 2014 exclude short-cycle tertiary education, which corresponds to the associate's degree in the United States. Data for 2015 include postsecondary non-higher-education.
Data from 2000 reported for 200

NOTE: Data in this table include all tertiary degrees, which correspond to all degrees at the associate's level and above in the United States. The International Standard Classification of Education (ISCED) was revised in 2011. The previous version, culated using ISCED 2011) ISCED 2011 was used to calculate all (wath the exception of China's 2014 data, which were cal data for Indonesia, the Russian Federation, Saudi Arabia, and South Africa, which were calculated using ISCED 1997). Under ISCED 2011, tertiary degrees are classified at the following levels: level 5 (corresponding to an associate's degree in the United States), level 6 (a bachelor's or equivalent degree), level 7 (a master's or equivalent degree), and level 8 (a doctoral or equivalent degree). Standard errors are not available for 2001 and 2005. Some data have been revised from previously published figures.
through 2016; and On Development (OECD), Education at a Glance, selected years, 2003 cation Database, retrieved October 18, 2016, from http://stats.oecd.org/Index.aspx. (This table was prepared October 2016.)

## -Not available

${ }^{1}$ Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries, to which each country reporting data contributes equally. ${ }^{2}$ Data are for 2013 instead of 2015
${ }^{3}$ Data are for 2014 instead of 2015.
${ }^{4}$ Associate's or higher degree data include some persons (less than 5 percent of the total) whose highest level of education was high school completion or a postsecondary program below the associate's degree level.
${ }^{5}$ High school completion data include some persons (17 percent of the total) who have completed a sufficient volume and standard of programs, any one of which individually would be classified as a program that only partially completes the high school (or upper secondary) level of education.
NOTE: All data in this table were calculated using International Standard Classification of Education (ISCED) 2011. High school completion refers to completion of ISCED 2011 level 3
upper secondary education); programs classified under ISCED 2011 as only partially completing level 3 are not included in the high school completion data except where otherwise noted. In this table, persons completing ISCED 2011 level 4 are also considered to have high school completion as their highest level of educational attainment. ISCED level 4 typically corresponds to postsecondary vocational programs below the associate's degree level in the United States. Associate's or higher degrees include ISCED 2011 level 5 (corresponding to the associate's degree in the United States), level 6 (bachelor's or equivalent degree), level 7 (master's or equivalent degree), and level 8 (doctoral or equivalent degree). For each country, the employment to population ratio of 25 - to 64 -year-olds is the number of persons in this age group who are employed as a percentage of the total civilian population in this age group.

## -Not available.

## $\dagger$ Not applicable.

$\ddagger$ Reporting standards not met (too few cases)
${ }^{1}$ Most of the education systems represent complete countries, but three of them represent subnational entities: England (which is part of the United Kingdom), Flanders (which is part of Belgium), and Northern Ireland (which is part of the United Kingdom).
${ }^{2}$ High school completion includes International Standard Classification of Education (ISCED) 1997 levels 3 and 4, with the exception of ISCED level 3C short programs. ISCED 3C short programs do not correspond to high school completion in the United States and are included in the less than high school completion" column in this table. The associate's degree data in this table refer to degrees classified as ISCED 1997 level 5B. The data for bachelor's or higher degree refer to degrees classified as ISCED 1997 level 5A and as level 6.

## ${ }^{3}$ Scale scores range from 0 to 500.

${ }^{4}$ Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries and subnational education systems, to which each country or subnational education system reporting data contributes equally, with the exception of England (UK) and Northern Ireland (UK), which contribute to the mean as a combined entity, England/ Northern Ireland (UK).
${ }^{5}$ Cyprus includes only the population under the effective control of the Government of the Republic of Cyprus. For the educational attainment data (columns 9 through 12), the item response rate for Cyprus is below 85 percent, missing data have not been explicity accounted for
${ }^{6}$ The Russian Federation does not include the population of the Moscow municipal region.
SOURCE: Organization for Economic Cooperation and Development (OECD), Program for the International Assessment of Adult Competencies (PIAAC), 2012. (This table was prepared May 2016.)

Table 604.20. Percentage distribution of 25 - to 65 -year-olds, by literacy proficiency level, numeracy proficiency level, selected levels of
educational attainment, and country or other education system: 2012

! Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
${ }^{1}$ Most of the education systems represent complete countries, but three of them repre sent subnational entities: England (which is part of the United Kingdom), Flanders (which is part of Belgium), and Northern Ireland (which is part of the United Kingdom).
${ }^{2}$ High school completion includes International Standard Classification of Education (ISCED) 1997 levels 3 and 4, with the exception of ISCED level 3C short programs. ISCED 3C short programs do not correspond to high school completion in the United States and are not included in the high school completion columns in this table. The data for bachelor's or higher degree refer to degrees classified as ISCED 1997 level 5A and as level 6.
${ }^{3}$ Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries and subnational education systems, to which each country or subnational education system reporting data contributes equally, with the exception of England (UK) and Northern Ireland (UK), which contribute to the mean as a combined entity, England/Northern Ireland (UK).
${ }^{4}$ Cyprus includes only the population under the effective control of the Government of the Republic of Cyprus. For the educational attainment data (columns 6 through 13), the item response rate for Cyprus is below 85 percent; missing data have not been explicitly accounted for.
${ }^{5}$ The Russian Federation does not include the population of the Moscow municipal region. NOTE: In this table, scores below level 1 and scores at level 1 are combined into the "at or below level 1" reporting category; scores at level 4 and scores at level 5 are combined into the "at level 4 or level 5" reporting category. For both literacy and numeracy, the pro-ficiency-level reporting categories correspond to the score ranges shown in parentheses: at or below level 1 (0-225.9), at level 2 (226.0-275.9), at level 3 (276.0-325.9), at level 4 or level 5 (326.0-500.0).
SOURCE: Organization for Economic Cooperation and Development (OECD), Program for the International Assessment of Adult Competencies (PIAAC), 2012. (This table was prepared May 2016.)

## Table 604.30. Employment rates and mean monthly earnings of 25 - to 65 -year-olds, by literacy proficiency level, numeracy proficiency level, and country or other education system: 2012

## Not applicable

!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
Most entities participating in the Program for the International Assessment of Adult Competencies (PIAAC) survey are countries, but a few of them are subnational regions. Following the name of each subnational region, its country is indicated in
parentheses. For example, England and Northern Ireland are both part of the United Kingdom (UK).
${ }^{2}$ Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries and subnational regions, to which each country or subnational region reporting data contributes equally.
${ }^{4}$ Results from the United States are based on combined data from 2012 and 2014
${ }^{5}$ Cyprus includes only the population under the effective control of the Government of the Republic of Cyprus anderation does not include the population of the Moscow municipal region
in 2012 . In otherwise noted, all countries' and subcompleted in 2015; this round was conducted only in nine countries/regions that did not participate in the first round. In the United States only, a supplemental round of data collection was completed in 2014 in order to expand the sample of U.S. adults, allowing for more in-depth data analysis. Detail may not sum to totals because of rounding.

$\dagger$ Not applicable.
!Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 and 50 percent.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Most entities participating in the Program for the International Assessment of Adult Com petencies (PIAAC) survey are countries, but a few of them are subnational regions. Following the name of each subnational region, its country is indicated in parentheses. For example, England and Northern Ireland are both part of the United Kingdom (UK).
${ }^{2}$ Items on the problem solving in technology-rich environments domain were offered only on computer. This column shows the percentages of 16 - to 19 -year-old respondents who were not assessed in this domain because they were unable to or elected not to take a com puter-based assessment
${ }^{3}$ For each country/region, percentages are based on only those 16- to 19-year-old respondents who were assessed in the domain of problem solving in technology-rich environments, which is defined as "using digital technology, communication tools, and networks to acquire and evaluate information, communicate with others, and perform practical tasks. ${ }^{4}$ The proficiency levels correspond to the following score ranges on a scale of 0 to 500: below level 1 (0-240.9), level 1 (241.0-290.9), level 2 (291.0-340.9), and level 3 (341.0500.0). Tasks at a higher level are more demanding in terms of requirements such as using specific as well as generic technology applications, using multiple functions and navigation, performing a greater number of steps, generating subgoals, evaluating information, and applying higher level forms of reasoning. For detailed descriptions of each proficiency level,
as well as specific examples of tasks at each level, see appendix B of the report Skills of U.S. Unemployed, Young, and Older Adults in Sharper Focus (NCES 2016-039rev), available at http://nces.ed.gov/pubs2016/2016039rev.pdf
Results for the United States are based on combined data from 2012 and 2014
Includes persons of all other races and those of Two or more races.
${ }^{7}$ Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development (OECD) countries and subnational regions, to which each country or subnational region reporting data contributes equally. The average in this table includes the United States and all other OECD countries/regions that assessed problem solving in technology-rich environments.
${ }^{8}$ France, Italy, and Spain are omitted from this table because these OECD countries did not assess problem solving in technology-rich environments
${ }^{9}$ Data are from 2015. Except where otherwise noted, data for other countries/regions are from 2012.
${ }^{10}$ The Russian Federation does not include the population of the Moscow municipal region. NOTE: Unless otherwise noted, all countries' and subnational regions' data are from 2012. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.

[^154]NOTE: Includes all expenditures by public and private education institutions (such as administration, instruction, ancillary services for students and families, and research and development) unless otherwise noted. Expenditures for International Standard Classi-
fication of Education (ISCED) level 4 (postsecondary non-higher-education) are included in elementary and secondary education unless otherwise noted. ISCED was revised in 2011. The previous version, ISCED 1997, was used to calculate all data for years prior to 2012 (with the exception of Canada's 2011 data, which were calculated using ISCED 2011). ISCED 2011 was used to calculate all data for 2012 and later years (with the exception of Chile's 2012 data, which were calculated using ISCED 1997). Data calculated using ISCED 2011 may not be directly comparable to data calculated using ISCED 1997. Data adjusted to U.S. dollars using the purchasing power parity (PPP) index. Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor. Some data have been revised from previously published figures.
through 2016; and Online Education Database, retrieved December 6, 2016, from http://stats.oecd.org/Index aspx years, This table was prepared January 2017.)

## \＃Rounds to zero

Includes preprimary education（for children ages 3 and older），not separately shown．
${ }^{2}$ Excludes expenditures that could not be reported by level of education．
${ }^{3}$ Refers to the mean of the data values for all reporting Organization for Economic Cooperation and Development（OECD） countries，to which each country reporting data contributes equally．The average includes all current OECD countries for ${ }^{4}$ Excludes expenditures from international sources．
${ }^{5}$ Excludes postsecondary non－higher－education．
${ }^{6}$ Postsecondary non－higher－education included in both secondary and higher education．
${ }^{7}$ Excludes occupation－specific education corresponding to that offered at the vocational associate＇s degree level in the United States．
${ }^{8}$ ºccupation－specific education corresponding to that offered at the vocational associate＇s degree level in the United States is
included in elementary and secondary education instead of in higher education
${ }^{9}$ Postsecondary non－higher－education included in higher education．

NOTE：Public direct expenditures on education include both amounts spent directly by governments to hire education personnel and to procure other resources，and amounts provided by governments to public or private institutions．Unless otherwise noted， public direct expenditures also include public subsidies to households for payments to education institutions and direct expend－ tures on education institutions from international sources．Private direct expenditures exclude public subsidies that are used for payments to education institutions．Expenditures for International Standard Classification of Education（ISCED）level 4 （postsec－ tions＂include expenditures that could not be reported by level of education unless otherwise noted．ISCED was revised in 2011 The previous version，ISCED 1997，was used to calculate all data for years prior to 2012 （with the exception of Canada＇s 2011 data，which were calculated using ISCED 2011）．ISCED 2011 was used to calculate all data for 2012 and later years（with the exception of Chile＇s 2012 data，which were calculated using ISCED 1997）．Data calculated using ISCED 2011 may not be directly comparable to data calculated using ISCED 1997．Detail may not sum to totals because of rounding．Some data have been revised from previously published figures．
terted years， 2003信 prepared January 2017．）

## CHAPTER 7

## Libraries and Use of Technology

#### Abstract

This chapter presents statistics on elementary and secondary school libraries, college and university libraries (including institution-level information for the 60 largest college libraries in the country), and public libraries. It contains data on library collections, staff, and expenditures, as well as library usage. Also included in this chapter are tables on access to and use of computers and the Internet among children and adults of various racial/ethnic groups, age groups, educational attainment levels, and income levels. Chapter 2 includes tables on use of computers and the Internet by elementary and secondary students and schools. Chapter 3 includes tables on distance and online education at the postsecondary level.

## Libraries

Among public schools that had a library in 2011-12, the average number of library staff per school was 1.8 , including 0.9 certified library/media specialists (table 701.10). On average, public school libraries had larger numbers of books on a per student basis in 2011-12 (2,188 per 100 students) than in 1999-2000 (1,803 per 100 students), 2003-04 (1,891 per 100 students), and 2007-08 (2,015 per 100 students). In 2011-12, public elementary school libraries had larger holdings than public secondary school libraries on a per student basis ( 2,570 books per 100 students, compared with 1,474 books per 100 students).

In 2014-15, there were libraries at 92 percent of degreegranting postsecondary institutions overall, 98 percent of public institutions, 99 percent of private nonprofit institutions, and 77 percent of private for-profit institutions (table 701.40). The calculations of library operating expenditures and number of books per full-time-equivalent (FTE) student in the following paragraph include both institutions with libraries and those without libraries.

At degree-granting postsecondary institutions, library operating expenditures per FTE student were 1 percent higher in 2001-02 than in 1991-92, after adjustment for inflation. Library operating expenditures per FTE student dropped by 25 percent from 2001-02 to 2011-12 (in inflation-adjusted dollars), but then rose by 13 percent from 2011-12 to 2014-15, resulting in a net decrease of 15 percent between 2001-02 and 2014-15. In 2014-15, library operating expenditures per FTE student averaged $\$ 526$ (in current dollars) across all degree-granting institutions. The amount varied
widely by institution control, however. Library operating expenditures averaged $\$ 444$ per FTE student attending a public institution in 2014-15, compared with $\$ 950$ per FTE student attending a private nonprofit institution and $\$ 71$ per FTE student attending a private for-profit institution. In 2014-15, the average number of books (including physical and electronic books) per FTE student also differed for public institutions ( 78 books), private nonprofit institutions ( 164 books), and private for-profit institutions (49 books). Across all degree-granting institutions, the average number of books per FTE student in 2014-15 was 95.

In 2014, there were 9,070 public libraries in the United States with a total of 765 million books and serial volumes (table 701.60). The annual number of visits per capita-that is, per resident of the areas served by the libraries-was 4.6, the annual number of reference transactions per capita was 0.9 , and the annual number of uses of public-access internet computers per capita was 1.1.

## Computer and Internet Use

Among all 3- to 18 -year-old children living in households in 2015, a total of 94 percent had any type of computer or smartphone in their household (table 702.10). (Each household was counted only once in the total, regardless of the number or types of computers/devices reported.) Comparisons were also made between two categories of computers/ devices: (1) a desktop, laptop, netbook, or notebook computer (referred to below as a "desktop/laptop") and (2) a handheld computer or smart mobile phone (referred to as a "smartphone"). A higher percentage of children lived in a household with a smartphone ( 89 percent) than in a household with a desktop/laptop ( 85 percent). The percentage of children who lived in a household with a desktop/laptop, in a household with a smartphone, and in a household with any type of computer/device differed by various demographic characteristics. For example, the percentage of children with a desktop/laptop in their household was higher for White children ( 91 percent) than for children who were Black (75 percent), Hispanic ( 75 percent), Pacific Islander ( 80 percent), or American Indian/Alaska Native ( 69 percent). The percentage who lived in a household with a smartphone was also higher for White children ( 92 percent) than for children who were Black ( 83 percent), Hispanic ( 83 percent), Pacific Islander (84 percent), or American Indian/Alaska Native (76
percent). The percentages of children in households with any type of computer/device, in households with a desktop/laptop, and in households with a smartphone were generally higher for children with higher family incomes than for those with lower family incomes (table 702.10 and figure 30). Among children with family incomes of $\$ 100,000$ to $\$ 149,000$, for example, 99 percent had any type of computer/device in their household; 96 percent had a desktop/ laptop in their household; and 96 percent had a smartphone in their household. In contrast, 89 percent of children with family incomes of $\$ 20,000$ to $\$ 29,000$ had any type of computer/device in their household; 71 percent had a desktop/ laptop in their household; and 80 percent had a smartphone in their household.

In 2015, 75 percent of the U.S. population age 3 and over used the Internet, up from 70 percent in 2011 (table 702.30). Internet usage differed by various demographic characteristics in 2015. For example, the percentage of internet users
was higher among persons age 3 and over who were White ( 78 percent) than among those who were Black ( 68 percent), Hispanic ( 66 percent), and American Indian/Alaska Native (70 percent). The percentage of internet users in the population age 3 and over was generally higher for those with higher family incomes than for those with lower family incomes. In 2015, for example, 86 percent of people with family incomes of $\$ 100,000$ to $\$ 149,000$ used the Internet, compared with 63 percent of people with family incomes of $\$ 20,000$ to $\$ 29,999$. Among persons age 25 and over, the percentage of internet users tended to be higher for those with higher levels of educational attainment (table 702.30 and figure 31). For example, the percentage of persons age 25 and over who used the Internet in 2015 was higher for those with a bachelor's or higher degree ( 88 percent) than for those whose highest level of educational attainment was a high school diploma or equivalent ( 65 percent).

Figure 30. Percentage of children ages 3 to 18 living in households with a computer, by type of computer and family income: 2015

[^155]Figure 31. Percentage of persons age 25 and over using the Internet anywhere, at home, and at the workplace, by highest level of educational attainment: 2011 and 2015

Highest level of educational attainment and location of internet use

Table 701.40. Collections, staff, and operating expenditures of degree-granting postsecondary institution libraries: Selected years, 1981-82 through 2014-15

## -Not available.

${ }^{1}$ Fall enrollment for the academic year specified
${ }^{2}$ For 1997-98 and later years, includes microform and electronic serials
${ }^{3}$ Excludes student assistants.
${ }^{4}$ Excludes capital outlay. Expenditure data are reported only by degree-granting institutions with total expenditures over \$100,000.
${ }^{5}$ Includes student hourly wages.
${ }^{6}$ Includes salary equivalents of contributed services staff.
${ }^{7}$ Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statis tics, U.S. Department of Labor, adjusted to a school-year basis.
${ }^{8}$ Includes computer hardware/software, bibliographic utilities/networks/consortia, and "other library operating expenditures" not individually listed.

NOTE: Data through 1995 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes more 2year colleges and excludes a few higher education institutions that did not grant degrees. Detail may not sum to totals because of rounding.

Refers to the number of administrative entities that are legally established under local or state law to provide public library service to the population of a local jurisdiction. A public library (administrative entity) may have a single outlet that provides direct service to the public, or it may have multiple service outlets. In 2014, a total of 17,218 service outlets were open to the public: 8,890 central libraries, 7,669 branch libraries, and 659 bookmobiles.
${ }^{2}$ Per capita (or per person) data are based on unduplicated populations of the areas served by public libraries.
${ }^{3}$ Includes only the number of physical visits (entering the library for any purpose). The survey does not collect data on the number of online visits.
${ }^{4}$ A reference transaction is an information contact that involves the knowledge, use, recommendations, interpretation, or instruction in the use of one or more information sources by a member of the library staff.
NOTE: Data include imputations for nonresponse. Detail may not sum to totals because of rounding.

$\dagger$ Not applicable.
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable estimate or the coefficient of variation (CV) is 50 percent or greater.
${ }^{1}$ Includes all persons who use the Internet at any location
${ }^{2}$ Persons living in areas whose metropolitan status was not identified are excluded from this analysis. In 2011 and 2015, less than 1 percent of persons lived in an area with non-identified metropolitan status.

Refers to metropolitan statistical areas, which contain at least one urbanized area with a population of 50,000 or more.
${ }^{4}$ Refers to areas that are outside of metropolitan statistical areas.
NOTE: Data are based on sample surveys of the civilian noninstitutionalized population, which excludes persons in the military and persons living in institutions (e.g., prisons or nursing facilities). Race categories exclude persons of Hispanic ethnicity.

## APPENDIX A Guide to Sources

The information presented in the Digest of Education Statistics was obtained from many sources, including federal and state agencies, private research organizations, and professional associations. The data were collected using many research methods, including surveys of a universe (such as all colleges) or of a sample, compilations of administrative records, and statistical projections. Brief descriptions of the information sources, data collections, and data collection methods that were used to produce this report are presented below, grouped by sponsoring organization. Additional details about many of these and other data sets can be found on the Department of Education's Data Inventory website (http://datainventory.ed.gov/).

## National Center for Education Statistics (NCES)

## Baccalaureate and Beyond Longitudinal Study

The Baccalaureate and Beyond Longitudinal Study (B\&B) is based on the National Postsecondary Student Aid Study (NPSAS) and provides information concerning education and work experience after completing a bachelor's degree. A special emphasis of $\mathrm{B} \& \mathrm{~B}$ is on those entering teaching. B\&B provides cross-sectional information 1 year after bachelor's degree completion (comparable to the information that was provided in the Recent College Graduates study), while at the same time providing longitudinal data concerning entry into and progress through graduate-level education and the workforce, income, and debt repayment. This information has not been available through follow-ups involving high school cohorts or even college-entry cohorts, because these cohorts have limited numbers who actually complete a bachelor's degree and continue their graduate education. Also, these cohorts are not representative of all bachelor's degree recipients.

B\&B followed NPSAS baccalaureate degree completers for a 10-year period after completion, beginning with NPSAS:93. About 11,000 students who completed their degrees in the 1992-93 academic year were included in the first $B \& B$ cohort ( $B \& B: 93$ ). The first follow-up of this cohort (B\&B:93/94) occurred 1 year later. In addition to collecting student data, $B \& B: 93 / 94$ collected postsecondary
transcripts covering the undergraduate period, which provided complete information on progress and persistence at the undergraduate level. The second follow-up of this cohort (B\&B:93/97) took place in spring 1997 and gathered information on employment history, family formation, and enrollment in graduate programs. The third follow-up (B\&B:93/03) occurred in 2003 and provided information concerning graduate study and long-term employment experiences after degree completion.

The second B\&B cohort (B\&B:2000), which was associated with NPSAS:2000, included 11,700 students who completed their degrees in the 1999-2000 academic year. The first and only follow-up survey of this cohort was conducted in 2001 (B\&B:2000/01) and focused on time to degree completion, participation in postbaccalaureate education and employment, and the activities of newly qualified teachers.

The third B\&B cohort (B\&B:08), which is associated with NPSAS:08, included 18,000 students who completed their degrees in the 2007-08 academic year. The first follow-up took place in 2009 (B\&B:08/09), and the second follow-up took place in 2012 (B\&B:08/12). The report Baccalaureate and Beyond: A First Look at the Employment Experiences and Lives of College Graduates, 4 Years On (B\&B:08/12) (NCES 2014-141) presents findings based on data from the second follow-up. It examines bachelor's degree recipients' labor market experiences and enrollment in additional postsecondary degree programs through the 4th year after graduation. In addition, 2008/12 Baccalaureate and Beyond Longitudinal Study (B\&B:08/12) Data File Documentation (NCES 2015141) describes the universe, methods, and data collection procedures used in the second follow-up. A third and final followup ( $\mathrm{B} \& \mathrm{~B}: 08 / 18$ ) to the third $\mathrm{B} \& \mathrm{~B}$ cohort is planned for 2018.

Further information on $B \& B$ may be obtained from

## Beginning Postsecondary Students Longitudinal Study

The Beginning Postsecondary Students Longitudinal Study (BPS) provides information on persistence, progress, and attainment for 6 years after initial time of entry into postsecondary education. BPS includes traditional and nontraditional (e.g., older) students and is representative of all beginning students in postsecondary education in a given year. Initially, these individuals are surveyed in the National Postsecondary Student Aid Study (NPSAS) during the year in which they first begin their postsecondary education. These same students are surveyed again 2 and 5 years later through the BPS. By starting with a cohort that has already entered postsecondary education and following it for 6 years, the BPS can determine the extent to which students who start postsecondary education at various ages differ in their progress, persistence, and attainment, as well as their entry into the workforce. The first BPS was conducted in 1989-90, with follow-ups in 1992 (BPS:90/92) and 1994 (BPS:90/94). The second BPS was conducted in 1995-96, with follow-ups in 1998 (BPS:96/98) and 2001 (BPS:96/01). The third BPS was conducted in 2003-04, with follow-ups in 2006 (BPS:04/06) and 2009 (BPS:04/09).

The fourth BPS was conducted in 2012, with a follow-up in 2014 (BPS:12/14) and one planned for 2017. In the base year, 1,690 institutions were sampled, of which all were confirmed eligible to participate. In addition, 128,120 students were sampled, and 123,600 were eligible to participate in the NPSAS:12 study. In the first follow-up (BPS:12/14), of the 35,540 eligible NPSAS:12 sample students, 24,770 responded, for an unweighted student response rate of 70 percent and a weighted response rate of 68 percent.

## Common Core of Data

The Common Core of Data (CCD) is NCES's primary database on public elementary and secondary education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts containing data designed to be comparable across all states. This database can be used to select samples for other NCES surveys and provide basic information and descriptive statistics on public elementary and secondary schools and schooling in general.

The CCD collects statistical information annually from approximately 100,000 public elementary and secondary schools and approximately 18,000 public school districts (including supervisory unions and regional education service agencies) in the 50 states, the District of Columbia, Department of Defense (DoD) dependents schools, the Bureau of Indian Education (BIE), Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and the U.S. Virgin Islands. Three categories of information are collected in the CCD survey: general descriptive information on schools and school districts; data on students and staff; and fiscal data. The general school and district descriptive information includes name, address, phone number, and type of locale; the data on students and staff include selected demographic characteristics; and the fiscal data pertain to revenues and current expenditures.

The EDFacts data collection system is the primary collection tool for the CCD. NCES works collaboratively with the Department of Education's Performance Information Management Service to develop the CCD collection procedures and data definitions. Coordinators from state education agencies (SEAs) submit the CCD data at different levels (school, agency, and state) to the EDFacts collection system. Prior to submitting CCD files to EDFacts, SEAs must collect and compile information from their respective local education agencies (LEAs) through established administrative records systems within their state or jurisdiction.

Once SEAs have completed their submissions, the CCD survey staff analyzes and verifies the data for quality assurance. Even though the CCD is a universe collection and thus not subject to sampling errors, nonsampling errors can occur. The two potential sources of nonsampling errors are nonresponse and inaccurate reporting. NCES attempts to minimize nonsampling errors through the use of annual training of SEA coordinators, extensive quality reviews, and survey editing procedures. In addition, each year, SEAs are given the opportunity to revise their state-level aggregates from the previous survey cycle.

The CCD survey consists of five components: The Public Elementary/Secondary School Universe Survey, the Local Education Agency (School District) Universe Survey, the State Nonfiscal Survey of Public Elementary/Secondary Education, the National Public Education Financial Survey (NPEFS), and the School District Finance Survey (F-33).

## Public Elementary/Secondary School Universe Survey

The Public Elementary/Secondary School Universe Survey includes all public schools providing education services to prekindergarten, kindergarten, grade 1-13, and ungraded students. For school year (SY) 2014-15, the survey included records for each public elementary and secondary school in the 50 states, the District of Columbia, the DoD dependents schools (overseas and domestic), the Bureau of Indian Education (BIE), Puerto Rico, American Samoa, the Northern Mariana Islands, Guam, and the U.S. Virgin Islands.

The Public Elementary/Secondary School Universe Survey includes data for the following variables: NCES school

ID number, state school ID number, name of the school, name of the agency that operates the school, mailing address, physical location address, phone number, school type, operational status, locale code, latitude, longitude, county number, county name, full-time-equivalent (FTE) classroom teacher count, low/high grade span offered, congressional district code, school level, students eligible for free lunch, students eligible for reduced-price lunch, total students eligible for free and reduced-price lunch, and student totals and detail (by grade, by race/ethnicity, and by sex). The survey also contains flags indicating whether a school is Title I eligible, schoolwide Title I eligible, a magnet school, a charter school, a shared-time school, or a BIE school, as well as which grades are offered at the school.

## Local Education Agency (School District) Universe Survey

The coverage of the Local Education Agency Universe Survey includes all school districts and administrative units providing education services to prekindergarten, kindergarten, grade 1-13, and ungraded students. The Local Education Agency Universe Survey includes records for the 50 states, the District of Columbia, Puerto Rico, the Bureau of Indian Education (BIE), American Samoa, Guam, the Northern Mariana Islands, the U.S. Virgin Islands, and the DoD dependents schools (overseas and domestic).

The Local Education Agency Universe Survey includes the following variables: NCES agency ID number, state agency ID number, agency name, phone number, mailing address, physical location address, agency type code, supervisory union number, American National Standards Institute (ANSI) state and county code, county name, core based statistical area (CBSA) code, metropolitan/micropolitan code, metropolitan status code, district locale code, congressional district code, operational status code, BIE agency status, low/high grade span offered, agency charter status, number of schools, number of full-time-equivalent teachers, number of ungraded students, number of PK-13 students, number of special education/Individualized Education Program students, number of English language learner students, instructional staff fields, support staff fields, and LEA charter status.

## State Nonfiscal Survey of Public Elementary/ Secondary Education

The State Nonfiscal Survey of Public Elementary/Secondary Education for the 2014-15 school year provides state-level, aggregate information about students and staff in public elementary and secondary education. It includes data from the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, the Northern Mariana Islands, Guam, and American Samoa. The DoD dependents schools (overseas and domestic) and the BIE are also included in the survey universe. This survey covers public school student membership by grade, race/ethnicity, and state or jurisdiction and covers number of staff in public schools by category and state or jurisdiction. Beginning with the 2006-07 school year, the number of diploma recipients and other high school
completers are no longer included in the State Nonfiscal Survey of Public Elementary/Secondary Education File. These data are now published in the public-use CCD State Dropout and Completion Data File.

## National Public Education Financial Survey

The purpose of the National Public Education Financial Survey (NPEFS) is to provide district, state, and federal policymakers, researchers, and other interested users with descriptive information about revenues and expenditures for public elementary and secondary education. The data collected are useful to (1) chief officers of state education agencies; (2) policymakers in the executive and legislative branches of federal and state governments; (3) education policy and public policy researchers; and (4) the public, journalists, and others.

Data for NPEFS are collected from state education agencies (SEAs) in the 50 states, the District of Columbia, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and the U.S. Virgin Islands. The data file is organized by state or jurisdiction and contains revenue data by funding source; expenditure data by function (the activity being supported by the expenditure) and object (the category of expenditure); average daily attendance data; and total student membership data from the CCD State Nonfiscal Survey of Public Elementary/Secondary Education.

## School District Finance Survey

The purpose of the School District Finance Survey (F-33) is to provide finance data for all local education agencies (LEAs) that provide free public elementary and secondary education in the United States. National and state totals are not included (national- and state-level figures are presented, however, in the National Public Education Financial Survey).

NCES partners with the U.S. Census Bureau in the collection of school district finance data. The Census Bureau distributes Census Form F-33, Annual Survey of School System Finances, to all SEAs, and representatives from the SEAs collect and edit data from their LEAs and submit data to the Census Bureau. The Census Bureau then produces two data files: one for distribution and reporting by NCES and the other for distribution and reporting by the Census Bureau. The files include variables for revenues by source, expenditures by function and object, indebtedness, assets, and student membership counts, as well as identification variables.

## Teacher Compensation Survey

The Teacher Compensation Survey (TCS) was a research and development effort designed to assess the feasibility of collecting and publishing teacher-level data from the administrative records residing in state education agencies. Twenty-three states participated in the TCS for school year 2008-09. Participating states provided data on salaries, years of teaching experience, highest degree earned, race/ ethnicity, and gender for each public school teacher.

The following text table lists the CCD file versions used in the current edition of the Digest of Education Statistics:

Table G. Common Core of Data (CCD) file versions used in the current edition of the Digest of Education Statistics: 1986-87 through 2014-15

## Early Childhood Longitudinal Study, Birth Cohort

The Early Childhood Longitudinal Study, Birth Cohort (ECLS-B) was designed to provide policymakers, researchers, child care providers, teachers, and parents with nationally representative information about children's early learning experiences and their transition to child care and school. From the time the ECLS-B children were infants until they entered kindergarten, their cognitive and physical development was measured using standardized assessments, and information about their care and learning experiences at home, in early care and education settings, and at school was collected through interviews with adults in the children's lives.

Data were collected from a sample of about 14,000 children born in the United States in 2001, representing a population of approximately 4 million. The children participating in the study came from diverse socioeconomic and racial/ethnic backgrounds, with oversamples of Chinese, other Asian and Pacific Islander, and American Indian/Alaska Native children. There were also oversamples of twins and of children born with moderately low and very low birthweight. Children, their parents (including nonresident and resident fathers), their child care and early
education providers, and their kindergarten teachers provided information on children's cognitive, social, emotional, and physical development. Information was also collected about the children's experiences across multiple settings (e.g., home, child care, and school).

Information about the ECLS-B children was collected when they were approximately 9 months old (2001-02), 2 years old (2003-04), and 4 years old/preschool age (2005-06). Additionally, in the fall of 2006, data were collected from all participating sample children, approximately 75 percent of whom were in kindergarten or higher. In the fall of 2007, data were collected from the approximately 25 percent of participating sample children who had not yet entered kindergarten or higher in the previous collection, as well as children who were repeating kindergarten in the 2007-08 school year.

In every round of data collection, children participated in assessment activities and parent respondents (usually the mothers of the children) were asked about themselves, their families, and their children. Resident fathers were asked about themselves and their role in the ECLS-B children's lives in the 9-month, 2-year, and preschool collections. Similar information was collected from nonresident biological fathers in the 9 -month and 2 -year collections. In addition, beginning when the children were 2 years old, their child care and early education providers were asked to provide information about their own experience and training and their setting's learning environment. At 2 years and at preschool, observations were conducted in the regular nonparental care and education arrangements of a subsample of children in order to obtain information about the quality of the arrangements. When the ECLS-B children were in kindergarten, their teachers were asked to provide information about the children's early learning experiences and their school and classroom environments. Also, the before- and after-school care and education providers of children in kindergarten were asked to provide information about their own experience, their training, and their setting's learning environment. School-level data, taken from other NCES datasets (the Common Core of Data and the Private School Universe Survey) and residential ZIP codes collected at each wave are also available.

Further information on the ECLS-B may be obtained from

Gail Mulligan<br>Jill McCarroll<br>Longitudinal Surveys Branch<br>Sample Surveys Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>ecls@ed.gov<br>http://nces.ed.gov/ecls/birth.asp

## Early Childhood Longitudinal Study, Kindergarten Class of 1998-99

The Early Childhood Longitudinal Study, Kindergarten Class of 1998-99 (ECLS-K) was designed to provide detailed information on children's school experiences throughout elementary school and into middle school. The study began in the fall of 1998. A nationally representative sample of about 21,300 children enrolled in 940 kindergarten programs during the 1998-99 school year was selected to participate in the ECLS-K. The children attended both public and private kindergartens and full- and part-day programs. The sample included children from different racial/ethnic and socioeconomic backgrounds and oversamples of Asian and Pacific Islander children and private school kindergartners.

In the kindergarten year (1998-99), base-year data were collected in the fall and spring. In the first-grade year (1999-2000), data were collected again in the fall and spring. In the 3 rd-grade (2002), 5th-grade (2004), and 8th-grade (2007) years, data were collected in the spring. The fall 1999 collection drew from a 30 percent subsample of schools; all other collections drew from the full sample of schools.

From kindergarten to 5th grade, the ECLS-K included a direct child cognitive assessment that was administered one on one with each child in the study. The assessment used a computer-assisted personal interview (CAPI) approach and a two-stage adaptive testing methodology. In the 8th grade, a two-stage adaptive paper-and-pencil assessment was administered in small groups. In kindergarten and first grade, the assessment included three cognitive domains: reading, mathematics, and general knowledge. General knowledge was replaced by science in the 3rd, 5th, and 8th grades. Children's height and weight were measured at each data collection point, and a direct measure of children's psychomotor development was administered in the fall of the kindergarten year only. In addition to these measures, the ECLS-K collected information about children's social skills and academic achievement through teacher reports in every grade and through student reports in the 3rd, 5th, and 8th grades.

A computer-assisted telephone interview with the children's parents/guardians was conducted at each data collection point. Parents/guardians were asked to provide key information about the children in the ECLS-K sample on subjects such as family structure (e.g., household members and composition), family demographics (e.g., family members' age, relation to the child being studied, and race/ethnicity), parent involvement, home educational activities (e.g., reading to the child), child health, parental education and employment status, and the social skills and behaviors of their children.

Data on the schools that children attended and their classrooms were collected through self-administered questionnaires completed by school administrators and classroom teachers. Administrators provided information about their schools' populations, programs, and policies. At the classroom level, data were collected from teachers on the composition of the classroom, teaching practices, curriculum, and teacher qualifications and experience. In addition, special education teachers and related services staff provided reports on the services received by children with an Individualized Education Program (IEP).

Further information on the ECLS-K may be obtained from

Gail Mulligan<br>Jill McCarroll<br>Longitudinal Surveys Branch<br>Sample Surveys Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>ecls@ed.gov<br>http://nces.ed.gov/ecls/kindergarten.asp

## Early Childhood Longitudinal Study, Kindergarten Class of 2010-11

The Early Childhood Longitudinal Study, Kindergarten Class of 2010-11 (ECLS-K:2011) provides detailed information on the school achievement and experiences of students throughout their elementary school years. The students who participated in the ECLS-K:2011 were followed longitudinally from the kindergarten year (the 2010-11 school year) through the spring of 2016, when most of them were expected to be in 5th grade. This sample of students is designed to be nationally representative of all students who were enrolled in kindergarten or who were of kindergarten age and being educated in an ungraded classroom or school in the United States in the 2010-11 school year, including those in public and private schools, those who attended full-day and part-day programs, those who were in kindergarten for the first time, and those who were kindergarten repeaters. Students who attended early learning centers or institutions that offered education only through kindergarten are included in the study sample and represented in the cohort.

The ECLS-K:2011 places emphasis on measuring students' experiences within multiple contexts and development in multiple domains. The design of the study includes the collection of information from the students, their parents/guardians, their teachers, and their schools. Information was collected from their before- and after-school care providers in the kindergarten year.

A nationally representative sample of approximately 18,170 children from about 1,310 schools participated in the base-year administration of the ECLS-K:2011 in the 2010-11 school year. The sample included children from different racial/ethnic and socioeconomic backgrounds. Asian/Pacific Islander students were oversampled to ensure that the sample included enough students of this race/ethnicity to make accurate estimates for the group as a whole. Eight data collections have been conducted to date: fall and spring of the children's kindergarten year (the base year), fall 2011 and spring 2012 (the 1st-grade year), fall 2012 and spring 2013 (the 2nd-grade year), spring 2014 (the 3rd-grade year), and spring 2015 (the 4th-grade year). The final data collection was conducted in the spring of 2016. Although the study refers to later rounds of data collection by the grade the majority of children are expected to be in (that is, the modal grade for children who were in kindergarten in the 2010-11 school year), children are included in subsequent data collections regardless of their grade level.

A total of approximately 780 of the 1,310 originally sampled schools participated during the base year of the study. This translates to a weighted unit response rate (weighted by the base weight) of 63 percent for the base year. In the base year, the weighted child assessment unit response rate was 87 percent for the fall data collection and 85 percent for the spring collection, and the weighted parent unit response rate was 74 percent for the fall collection and 67 percent for the spring collection.

Fall and spring data collections were conducted in the 2011-12 school year, when the majority of the children were in the 1st grade. The fall collection was conducted within a 33 percent subsample of the full base-year sample, and the spring collection was conducted within the full base-year sample. The weighted child assessment unit response rate was 89 percent for the fall data collection and 88 percent for the spring collection, and the weighted parent unit response rate was 87 percent for the fall data collection and 76 percent for the spring data collection.

In the 2012-13 data collection (when the majority of the children were in the 2 nd grade) the weighted child assessment unit response rate was 84.0 percent in the fall and 83.4 percent in the spring. In the 2014 spring data collection (when the majority of the children were in the 3rd grade), the weighted child assessment unit response rate was 79.9 percent.

## EDFacts

EDFacts is a centralized data collection through which state education agencies submit PK-12 education data to the U.S. Department of Education (ED). All data in EDFacts are organized into "data groups" and reported to ED using defined file specifications. Depending on the data group, state education agencies may submit aggregate counts for the state as a whole or detailed counts for individual schools or school districts. EDFacts does not collect student-level records. The entities that are required to report EDFacts data vary by data group but may include the 50 states, the District of Columbia, the Department of Defense (DoD) dependents schools, the Bureau of Indian Education, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and the U.S. Virgin Islands. More information about EDFacts file specifications and data groups can be found at http://www.ed.gov/EDFacts.

EDFacts is a universe collection and is not subject to sampling error, but nonsampling errors such as nonresponse and inaccurate reporting may occur. The U.S. Department of

Education attempts to minimize nonsampling errors by training data submission coordinators and reviewing the quality of state data submissions. However, anomalies may still be present in the data.

Differences in state data collection systems may limit the comparability of EDFacts data across states and across time. To build EDFacts files, state education agencies rely on data that were reported by their schools and school districts. The systems used to collect these data are evolving rapidly and differ from state to state.

In some cases, EDFacts data may not align with data reported on state education agency websites. States may update their websites on schedules different from those they use to report data to ED. Furthermore, ED may use methods for protecting the privacy of individuals represented within the data that could be different from the methods used by an individual state.

EDFacts data on homeless students enrolled in public schools are collected in data group 655 within file 118. EDFacts data on English language learners enrolled in public schools are collected in data group 678 within file 141. EDFacts four-year adjusted cohort graduation rate (ACGR) data are collected in data group 695 within file 150 and in data group 696 within file 151. EDFacts collects these data groups on behalf of the Office of Elementary and Secondary Education.

## Education Longitudinal Study of 2002

The Education Longitudinal Study of 2002 (ELS:2002) is a longitudinal survey that is monitoring the transitions of a national probability sample of 10th-graders in public, Catholic, and other private schools. Survey waves follow both students and high school dropouts and monitor the transition of the cohort to postsecondary education, the labor force, and family formation.

In the base year of the study, of 1,200 eligible contacted schools, 750 participated, for an overall weighted school participation rate of approximately 68 percent ( 62 percent unweighted). Of 17,600 selected eligible students, 15,400 participated, for an overall weighted student response rate of approximately 87 percent. (School and student weighted response rates reflect use of the base weight [design weight] and do not include nonresponse adjustments.) Information for the study is obtained not just from students and their school records, but also from the students' parents, their teachers, their librarians, and the administrators of their schools.

The first follow-up was conducted in 2004, when most sample members were high school seniors. Base-year students who remained in their base schools were resurveyed and tested in mathematics. Sample freshening was conducted to make the study representative of spring 2004 high school seniors nationwide. Students who were not still at their base schools were all administered a questionnaire. The first follow-up weighted student response rate was 89 percent.

The second follow-up, conducted in 2006, continued to follow the sample of students into postsecondary education, the workforce, or both. The weighted student response rate for this follow-up was 82 percent. The third follow-up, which had a weighted student response rate of 78 percent, was conducted in 2012; the data were released in January 2014.

The postsecondary transcript data collection was conducted in 2013-14. Postsecondary transcripts were requested for each of the ELS:2002 sample members who reported attending an IPEDS postsecondary institution. Transcripts were obtained for 11,623 of 12,549 eligible sample members for a weighted response rate of 77 percent. For more information on the postsecondary transcript data collection, see Education Longitudinal Study of 2002 (ELS:2002): A First Look at the Postsecondary Transcripts of 2002 High School Sophomores (NCES 2015-034).

## Fast Response Survey System

The Fast Response Survey System (FRSS) was established in 1975 to collect issue-oriented data quickly, with a minimal burden on respondents. The FRSS, whose surveys collect and report data on key education issues at the elementary and secondary levels, was designed to meet the data needs of Department of Education analysts, planners, and decisionmakers when information could not be collected quickly through NCES's large recurring surveys. Findings from FRSS surveys have been included in congressional reports, testimony to congressional subcommittees, NCES reports, and other Department of Education reports. The findings are also often used by state and local education officials.

Data collected through FRSS surveys are representative at the national level, drawing from a sample that is appropriate for each study. The FRSS collects data from state education agencies and national samples of other educational organizations and participants, including local education agencies, public and private elementary and secondary schools, elementary and secondary school teachers and principals, and public libraries and school libraries. To ensure a
minimal burden on respondents, the surveys are generally limited to three pages of questions, with a response burden of about 30 minutes per respondent. Sample sizes are relatively small (usually about 1,000 to 1,500 respondents per survey) so that data collection can be completed quickly.

Further information on the FRSS may be obtained from

## Condition of America's Public School Facilities

Condition of America's Public School Facilities: 1999 (NCES 2000-032) is a report that presents national data about the condition of public schools in 1999. It provides results from the survey "Condition of Public School Facilities, 1999" (FRSS 73), which was conducted by NCES using its Fast Response Survey System (FRSS). The survey collected information about the condition of school facilities and the costs of bringing them into good condition; school plans for repairs, renovations, and replacements; the age of public schools; and overcrowding and practices used to address overcrowding. The results presented in this report are based on questionnaire data for 900 public elementary and secondary schools in the United States. The responses were weighted to produce national estimates that represent all regular public schools in the United States.

In 2013, NCES conducted "Condition of Public School Facilities: 2012-13" (FRSS 105), an FRSS survey covering most of the same topics. The First Look report Condition of America’s Public School Facilities: 2012-13 (NCES 2014022) is based on results from this FRSS survey.

Further information on these FRSS reports and surveys may be obtained from

## Public School Principals Report on Their School Facilities: Fall 2005

This report (NCES 2007-007) presents information on the extent of the match between the enrollment and the capacity of school buildings, environmental factors that can affect the use of classrooms and school buildings, the extent and ways in which schools use portable buildings and the reasons for using them, the availability of dedicated rooms for particular subject areas (such as science labs or music rooms), and the cleanliness and maintenance of student restrooms.

Results from the FRSS survey "Public School Principals' Perceptions of Their School Facilities: Fall 2005" (FRSS 88) form the basis of the report. The survey was mailed to school principals, who were asked to complete it themselves. The sample included 1,205 public schools in the 50 states and the District of Columbia. The sample was selected from the 2002-03 Common Core of Data (CCD) Public Elementary/ Secondary School Universe File, the most current available at the time of selection. Of the 1,205 schools surveyed, 47 were determined to be ineligible. Of the remaining 1,158 schools, responses were received from 1,045. Data have been weighted to yield national estimates of public elementary/secondary schools. The unweighted response rate was 90 percent, and the weighted response rate was 91 percent.

Further information on this report may be obtained from

Internet Access in U.S. Public Schools and Classrooms: 1994-2005

This report (NCES 2007-020) is based on data collected in the FRSS survey "Internet Access in U.S. Public Schools, Fall 2005" (FRSS 90). The survey was designed to assess the federal government's commitment to assist every school and classroom in connecting to the Internet by the year 2000.

In 1994, NCES began surveying approximately 1,000 public schools each year regarding their access to the Internet, access in classrooms, and, since 1996, their type of internet connections. Later administrations of this survey were expanded to cover emerging issues. The 2003 survey (FRSS 86) was designed to update the questions in the 2002 survey (FRSS 83) and covered the following topics: school connectivity, student access to computers and the Internet, school websites, technologies and procedures to prevent student access to inappropriate websites, and teacher professional development on how to incorporate the Internet into the curriculum.

In 2005, respondents were asked about the number of instructional computers with access to the Internet, the types of internet connections, the technologies and procedures used to prevent student access to inappropriate material on the Internet, and the availability of handheld and laptop computers for students and teachers. Respondents also provided information on teacher professional development in integrating the use of the Internet into the curriculum and using the Internet to provide opportunities and information for teaching and learning.

## Use of Educational Technology in Public Schools

In 2008, the NCES survey on educational technology use in public schools was redesigned and expanded to a set of three surveys (i.e., a school-, district-, and teacher-level survey).

The three surveys provide complementary information and together cover a broader range of topics than would be possible with one survey alone. The set of surveys collected data on availability and use of a range of educational technology resources, such as district and school networks, computers, devices that enhance the capabilities of computers for instruction, and computer software. They also collected information on leadership and staff support for educational technology within districts and schools.

Educational Technology in U.S. Public Schools: Fall 2008 (NCES 2010-034) is based on the school-level survey, "Education Technology in U.S. Public Schools: Fall 2008" (FRSS 92); Educational Technology in Public School Districts: Fall 2008 (NCES 2010-003) is based on the districtlevel school technology survey, "Educational Technology in Public School Districts, Fall 2008" (FRSS 93); and Teachers' Use of Educational Technology in U.S. Public Schools: 2009 (NCES 2010-040) is based on the teacher-level school technology survey, "Teachers' Use of Educational Technology in U.S. Public Schools, 2009" (FRSS 95).

Further information on internet access and technology use in public schools and classrooms may be obtained from

## Distance Education for Public Elementary and Secondary School Students

The report Technology-Based Distance Education Courses for Public Elementary and Secondary School Students: 2002-03 and 2004-05 (NCES 2008-008) presented data collected in the FRSS survey "Distance Education Courses for Public Elementary and Secondary School Students, 2004-05" (FRSS 89, 2005). The report included national estimates of the prevalence and characteristics of technology-based distance education courses in public schools nationwide in school year 2004-05. The report also compared those data with the baseline data that were collected in the FRSS survey "Distance Education Courses for Public Elementary and Secondary School Students: 2002-03" (FRSS 84, 2003) and provided longitudinal analysis of change in the districts that responded to both the 2002-03 and 2004-05 surveys.

Distance education courses were defined as credit-granting courses offered to elementary and secondary school students enrolled in the district in which the teacher and student were in different locations. These courses could be delivered via audio, video (live or prerecorded), or Internet or other computer technologies.

Distance Education Courses for Public Elementary and Secondary School Students: 2009-10 (NCES 2012-008) presents national estimates about student enrollment in dis-
tance education courses in public school districts. The estimates are based on a district survey, "Distance Education Courses for Public Elementary and Secondary School Students: 2009-10" (FRSS 98, 2010), about distance education courses offered by the district or by any of the schools in the district during the 12 -month 2009-10 school year. Distance education courses were defined as courses offered to elementary and secondary school students regularly enrolled in the district that were (1) credit granting; (2) technology delivered; and (3) had the instructor in a different location than the students and/or had course content developed in, or delivered from, a different location than that of the students.

Further information on FRSS reports on distance education may be obtained from

## School Safety and Discipline

The FRSS survey "School Safety and Discipline: 2013-14" (FRSS 106, 2014) collected nationally representative data on public school safety and discipline for the 2013-14 school year. The topics covered included specific safety and discipline plans and practices, training for classroom teachers and aides related to school safety and discipline issues, security personnel, frequency of specific discipline problems, and number of incidents of various offenses.

The survey was mailed to approximately 1,600 regular public schools in the 50 states and the District of Columbia. Recipients were informed that the survey was designed to be completed by the person most knowledgeable about safety and discipline at the school. The unweighted survey response rate was 86 percent, and the weighted response rate using the initial base weights was 85 percent. The survey weights were adjusted for questionnaire nonresponse, and the data were then weighted to yield national estimates that represent all eligible regular public schools in the United States. The report Public School Safety and Discipline: 2013-14 (NCES 2015-051) presents selected findings from the survey.

Further information on this FRSS survey may be obtained from

## Federal Support for Education

NCES prepares an annual compilation of federal funds for education for the Digest of Education Statistics. Data for U.S. Department of Education programs come from the Budget of the United States Government. Budget offices of other federal agencies provide information for all other federal program support except for research funds, which are obligations reported by the National Science Foundation in Federal Funds for Research and Development. Some data are estimated, based on reports from the federal agencies contacted and the Budget of the United States Government.

Except for money spent on research, outlays are used to report program funds to the extent possible. Some Digest of Education Statistics tables report program funds as obligations, as noted in the title of the table. Some federal program funds not commonly recognized as education assistance are also included in the totals reported. For example, portions of federal funds paid to some states and counties as shared revenues resulting from the sale of timber and minerals from public lands have been estimated as funds used for education purposes. Parts of the funds received by states (in 1980) and localities (in all years) under the General Revenue Sharing Program are also included, as are portions of federal funds received by the District of Columbia. The share of these funds allocated to education is assumed to be equal to the share of general funds expended for elementary and secondary education by states and localities in the same year, as reported by the U.S. Census Bureau in its annual publication, Government Finances.

The share of federal funds assigned to education for the District of Columbia is assumed to be equal to the share of the city's general fund expenditures for each level of education.

For the job training programs conducted by the Department of Labor, only estimated sums spent on classroom training have been reported as educational program support.

During the 1970s, the Office of Management and Budget (OMB) prepared an annual analysis of federal education program support. These were published in the Budget of the United States Government, Special Analyses. The information presented in this report is not, however, a continuation of the OMB series. A number of differences in the two series should be noted. OMB required all federal agencies to report outlays for education-related programs using a standardized form, thereby assuring agency compliance in reporting. The scope of education programs reported in the Digest of Education Statistics differs from the scope of programs reported in the OMB reports. Off-budget items such as the annual volume of guaranteed student loans were not included in OMB's reports. Finally, while some mention is made of an annual estimate of federal tax expenditures, OMB did not include them in its annual analysis of federal education support. Estimated federal tax expenditures for education are the difference between current federal tax receipts and what these receipts would be without existing education deductions to income allowed by federal tax provisions.

Recipients' data are estimated based on Estimating Federal Funds for Education: A New Approach Applied to Fiscal Year 1980 (Miller, V., and Noell, J., 1982, Journal of Education Finance); Federal Support for Education, various years; and the Catalog of Federal Domestic Assistance (www.cfda.gov). The recipients' data are estimated and tend to undercount higher education institutions, students, and local education agencies. This is because some of the federal programs have more than one recipient receiving funds. In these cases, the recipients were put into a "mixed recipients" category, because there was no way to disaggregate the amount each recipient received.

Further information on federal support for education may be obtained from

## High School and Beyond Longitudinal Study

The High School and Beyond Longitudinal Study (HS\&B) is a nationally representative sample survey of individuals who were high school sophomores and seniors in 1980. As a large-scale, longitudinal survey, its primary purpose is to observe the educational and occupational plans and activities of young people as they pass through the American educational system and take on their adult roles. The study contributes to the understanding of the development of young adults and the factors that determine individual education and career outcomes. The availability of this longitudinal data encourages research in such areas as the strength of secondary school curricula, the quality and effectiveness of secondary and postsecondary schooling, the demand for postsecondary education, problems of financing postsecondary education, and the adequacy of postsecondary alternatives open to high school students.

The HS\&B survey gathered data on the education, work, and family experiences of young adults for the pivotal years during and immediately following high school. The student questionnaire covered school experiences, activities, attitudes, plans, selected background characteristics, and language proficiency. Parents were asked about their educational aspirations for their children and plans for how their postsecondary education would be financed. Teachers were surveyed regarding their assessments of their students' futures. The survey also collected detailed information, from complete high school transcripts, on courses taken and grades achieved.

The base-year survey (conducted in 1980) was a probability sample of 1,015 high schools with a target number of 36 sophomores and 36 seniors in each school. A total of 58,270 students participated in the base-year survey. Substitutions were
made for nonparticipating schools-but not for students-in those strata where it was possible. Overall, 1,120 schools were selected in the original sample and 810 of these schools participated in the survey. An additional 200 schools were drawn in a replacement sample. Student refusals and absences resulted in an 82 percent completion rate for the survey.

Several small groups in the population were oversampled to allow for special study of certain types of schools and students. Students completed questionnaires and took a battery of cognitive tests. In addition, a sample of parents of sophomores and seniors (about 3,600 for each cohort) was surveyed.

HS\&B first follow-up activities took place in the spring of 1982. The sample for the first follow-up survey included approximately 30,000 individuals who were sophomores in 1980. The completion rate for sample members eligible for on-campus survey administration was about 96 percent. About 89 percent of the students who left school between the base-year and first follow-up surveys (e.g., dropouts, transfer students, and early graduates) completed the first followup sophomore questionnaire.

As part of the first follow-up survey of HS\&B, transcripts were requested in fall 1982 for an 18,150-member subsample of the sophomore cohort. Of the 15,940 transcripts actually obtained, 12,120 transcripts represented students who had graduated in 1982 and thus were eligible for use in the overall curriculum analysis presented in this publication. All courses in each transcript were assigned a 6-digit code based on the Classification of Secondary School Courses (a coding system developed to standardize course descriptions; see http://nces.ed.gov/surveys/hst/courses.asp). Credits earned in each course are expressed in Carnegie units. (The Carnegie unit is a standard of measurement that represents one credit for the completion of a 1-year course. To receive credit for a course, the student must have received a passing grade-"pass," "D," or higher.) Students who transferred from public to private schools or from private to public schools between their sophomore and senior years were eliminated from public/private analyses.

In designing the senior cohort first follow-up survey, one of the goals was to reduce the size of the retained sample while still keeping sufficient numbers of various racial/ethnic groups to allow important policy analyses. A total of about 11,230 of the 12,000 individuals subsampled ( 93.6 percent) completed the questionnaire. Information was obtained about the respondents' school and employment experiences, family status, and attitudes and plans.

The samples for the second follow-up, which took place in spring 1984, consisted of about 12,000 members of the senior cohort and about 15,000 members of the sophomore cohort. The completion rate for the senior cohort was 91 percent, and the completion rate for the sophomore cohort was 92 percent.

HS\&B third follow-up data collection activities were performed in spring 1986. Both the sophomore and senior cohort samples for this round of data collection were the same as those used for the second follow-up survey. The
completion rates for the sophomore and senior cohort samples were 91 percent and 88 percent, respectively.

HS\&B fourth follow-up data collection activities were performed in 1992 but only covered the 1980 sophomore class. These activities included examining aspects of these students' early adult years, such as enrollment in postsecondary education, experience in the labor market, marriage and child rearing, and voting behavior. In the postsecondary transcript update conducted in 1993, transcripts were collected based on student reports of enrollment in postsecondary education.

An NCES series of technical reports and data file user's manuals, available electronically, provides additional information on the survey methodology.

Further information on HS\&B may be obtained from

## High School Longitudinal Study of 2009

The High School Longitudinal Study of 2009 (HSLS:09) is a nationally representative, longitudinal study of approximately 21,0009 th-grade students in 944 schools who will be followed through their secondary and postsecondary years. The study focuses on understanding students' trajectories from the beginning of high school into postsecondary education, the workforce, and beyond. The HSLS:09 questionnaire is focused on, but not limited to, information on science, technology, engineering, and mathematics (STEM) education and careers. It is designed to provide data on mathematics and science education, the changing high school environment, and postsecondary education. This study features a new student assessment in algebra skills, reasoning, and problem solving and includes surveys of students, their parents, math and science teachers, and school administrators, as well as a new survey of school counselors.

The HSLS:09 base year took place in the 2009-10 school year, with a randomly selected sample of fall-term 9th-graders in more than 900 public and private high schools that had both a 9th and an 11th grade. Students took a mathematics assessment and survey online. Students' parents, principals, and mathematics and science teachers and the school's lead counselor completed surveys on the phone or online.

The HSLS:09 student questionnaire includes interest and motivation items for measuring key factors predicting choice of postsecondary paths, including majors and eventual careers. This study explores the roles of different factors in the development of a student's commitment to attend college and then take the steps necessary to succeed in college (the right courses, courses in specific sequences, etc.). Questionnaires in
this study have asked more questions of students and parents regarding reasons for selecting specific colleges (e.g., academic programs, financial aid and access prices, and campus environment).

The first follow-up of HSLS:09 occurred in the spring of 2012, when most sample members were in the 11th grade. Data files and documentation for the first follow-up were released in fall 2013 and are available on the NCES website.

A between-round postsecondary status update survey took place in the spring of students' expected graduation year (2013). It asked respondents about college applications, acceptances, and rejections, as well as their actual college choices. In the fall of 2013 and the spring of 2014, high school transcripts were collected and coded.

A full second follow-up took place in 2016, when most sample members were 3 years beyond high school graduation. Additional follow-ups are planned, to at least age 30.

Further information on HSLS:09 may be obtained from
Elise Christopher
Longitudinal Surveys Branch
Sample Surveys Division
National Center for Education Statistics

Washington, DC 20202
hsls09@ed.gov
http://nces.ed.gov/surveys/hsls09

## High School Transcript Studies

High school transcript studies have been conducted since 1982 in conjunction with major NCES data collections. The studies collect information that is contained in a student's high school record-courses taken while attending secondary school, information on credits earned, when specific courses were taken, and final grades.

A high school transcript study was conducted in 2004 as part of the Education Longitudinal Study of 2002 (ELS:2002/ 2004). A total of 1,550 schools participated in the request for transcripts, for an unweighted participation rate of approximately 79 percent. Transcript information was received on 14,920 members of the student sample (not just graduates), for an unweighted response rate of 91 percent.

Similar studies were conducted of the coursetaking patterns of 1982, 1987, 1990, 1992, 1994, 1998, 2000, 2005, and 2009 high school graduates. The 1982 data are based on approximately 12,000 transcripts collected by the High School and Beyond Longitudinal Study (HS\&B). The 1987 data are based on approximately 25,000 transcripts from 430 schools obtained as part of the 1987 NAEP High School Transcript Study, a scope comparable to that of the NAEP transcript studies conducted in 1990, 1994, 1998, and 2000. The 1992 data are based on approximately 15,000 transcripts collected by the National Education Longitudinal Study of 1988 (NELS:88/92). The 2005 data, from the 2005 NAEP High School Transcript Study, come from a sample of over 26,000 transcripts from 640 public schools and 80 private
schools. The 2009 data are from the 2009 NAEP High School Transcript Study, which collected transcripts from a nationally representative sample of 37,700 high school graduates from about 610 public schools and 130 private schools.

Because the 1982 HS\&B transcript study used a different method for identifying students with disabilities than was used in NAEP transcript studies after 1982, and in order to make the statistical summaries as comparable as possible, all the counts and percentages in this report are restricted to students whose records indicate that they had not participated in a special education program. This restriction lowers the number of 1990 graduates represented in the tables to 20,870.

Further information on NAEP high school transcript studies may be obtained from

## Integrated Postsecondary Education Data System

The Integrated Postsecondary Education Data System (IPEDS) surveys approximately 7,500 postsecondary institutions, including universities and colleges, as well as institutions offering technical and vocational education beyond the high school level. IPEDS, an annual universe collection that began in 1986, replaced the Higher Education General Information Survey (HEGIS). In order to present data in a timely manner, Digest of Education Statistics tables use "provisional" IPEDS data for the most recent years. These data have been fully reviewed, edited, and imputed, but do not incorporate data revisions submitted by institutions after the close of data collection. Tables are revised with these institutional revisions on a periodic basis.

IPEDS consists of interrelated survey components that provide information on postsecondary institutions, student enrollment, programs offered, degrees and certificates conferred, and both the human and financial resources involved in the provision of institutionally based postsecondary education.

Prior to 2000, the IPEDS survey had the following subjectmatter components: Graduation Rates; Fall Enrollment; Institutional Characteristics; Completions; Salaries, Tenure, and Fringe Benefits of Full-Time Faculty; Fall Staff; Finance; and Academic Libraries (in 2000, the Academic Libraries component became a survey separate from IPEDS). Since 2000, IPEDS survey components occurring in a particular collection year have been organized into three seasonal collection periods: fall, winter, and spring. The Institutional Characteristics and Completions components first took place during the fall 2000 collection; the Employees by Assigned Position (EAP), Salaries, and Fall Staff components first took place during the winter 2001-02 collection; and the Enrollment, Student Financial Aid, Finance, and Graduation Rates components first took place during the spring 2001 collection. In the winter 2005-06 data collection, the EAP, Fall Staff, and Salaries components were merged into the Human Resources component. During the 2007-08 collection year, the Enrollment component was broken into two separate components: 12-Month Enrollment (taking place in the fall collection) and Fall Enrollment (taking place in the spring collection). In the 2011-12 IPEDS data collection year, the Student Financial Aid component was moved to the winter data collection to aid in the timing of the net price of attendance calculations displayed on the College Navigator (http://nces.ed.gov/collegenavigator). In the 2012-13 IPEDS data collection year, the Human Resources component was moved from the winter data collection to the spring data collection, and in the 2013-14 data collection year, the Graduation Rates and Graduation Rates 200 Percent components were moved from the spring data collection to the winter data collection. In the 2014-15 data collection year, a new component (Admissions) was added to IPEDS and a former IPEDS component (Academic Libraries) was reintegrated into IPEDS. The Admissions component, created out of admissions data contained in the fall collection's Institutional Characteristics component, was made a part of the winter collection. The Academic Libraries component, after having been conducted as a survey independent of IPEDS between 2000 and 2012, was reintegrated into IPEDS as part of the spring collection.

Beginning in 2008-09, the first-professional degree category was combined with the doctor's degree category. However, some degrees formerly identified as first-professional that take more than two full-time-equivalent academic years to complete, such as those in Theology (M.Div, M.H.L./ Rav), are included in the master's degree category. Doctor's degrees were broken out into three distinct categories: research/scholarship, professional practice, and other doctor's degrees.

IPEDS race/ethnicity data collection also changed in 2008-09. The "Asian" race category is now separate from a "Native Hawaiian or Other Pacific Islander" category, and a new category of "Two or more races" has been added.

The degree-granting institutions portion of IPEDS is a census of colleges that award associate's or higher degrees and are eligible to participate in Title IV financial aid programs. Prior to 1993, data from technical and vocational
institutions were collected through a sample survey. Beginning in 1993, all data are gathered in a census of all postsecondary institutions. Beginning in 1997, the survey was restricted to institutions participating in Title IV programs. The tabulations developed for editions of the Digest of Education Statistics from 1993 forward are based on lists of all institutions and are not subject to sampling errors.

The classification of institutions offering college and university education changed as of 1996. Prior to 1996, institutions that had courses leading to an associate's or higher degree or that had courses accepted for credit toward those degrees were considered higher education institutions. Higher education institutions were accredited by an agency or association that was recognized by the U.S. Department of Education or were recognized directly by the Secretary of Education. The newer standard includes institutions that award associate's or higher degrees and that are eligible to participate in Title IV federal financial aid programs. Tables that contain any data according to this standard are titled "degree-granting" institutions. Time-series tables may contain data from both series, and they are noted accordingly. The impact of this change on data collected in 1996 was not large. For example, tables on faculty salaries and benefits were only affected to a very small extent. Also, degrees awarded at the bachelor's level or higher were not heavily affected. The largest impact was on private 2-year college enrollment. In contrast, most of the data on public 4-year colleges were affected to a minimal extent. The impact on enrollment in public 2-year colleges was noticeable in certain states, such as Arizona, Arkansas, Georgia, Louisiana, and Washington, but was relatively small at the national level. Overall, total enrollment for all institutions was about one-half of 1 percent higher in 1996 for degree-granting institutions than for higher education institutions.

Prior to the establishment of IPEDS in 1986, HEGIS acquired and maintained statistical data on the characteristics and operations of higher education institutions. Implemented in 1966, HEGIS was an annual universe survey of institutions accredited at the college level by an agency recognized by the Secretary of the U.S. Department of Education. These institutions were listed in NCES's Education Directory, Colleges and Universities.

HEGIS surveys collected information on institutional characteristics, faculty salaries, finances, enrollment, and degrees. Since these surveys, like IPEDS, were distributed to all higher education institutions, the data presented are not subject to sampling error. However, they are subject to nonsampling error, the sources of which varied with the survey instrument.

The NCES Taskforce for IPEDS Redesign recognized that there were issues related to the consistency of data definitions as well as the accuracy, reliability, and validity of other quality measures within and across surveys. The IPEDS redesign in 2000 provided institution-specific webbased data forms. While the new system shortened data processing time and provided better data consistency, it did not address the accuracy of the data provided by institutions.

Beginning in 2003-04 with the Prior Year Data Revision System, prior-year data have been available to institutions entering current data. This allows institutions to make changes to their prior-year entries either by adjusting the data or by providing missing data. These revisions allow the evaluation of the data's accuracy by looking at the changes made.

NCES conducted a study (NCES 2005-175) of the 2002-03 data that were revised in 2003-04 to determine the accuracy of the imputations, track the institutions that submitted revised data, and analyze the revised data they submitted. When institutions made changes to their data, it was assumed that the revised data were the "true" data. The data were analyzed for the number and type of institutions making changes, the type of changes, the magnitude of the changes, and the impact on published data.

Because NCES imputes for missing data, imputation procedures were also addressed by the Redesign Taskforce. For the 2003-04 assessment, differences between revised values and values that were imputed in the original files were compared (i.e., revised value minus imputed value). These differences were then used to provide an assessment of the effectiveness of imputation procedures. The size of the differences also provides an indication of the accuracy of imputation procedures. To assess the overall impact of changes on aggregate IPEDS estimates, published tables for each component were reconstructed using the revised 2002-03 data. These reconstructed tables were then compared to the published tables to determine the magnitude of aggregate bias and the direction of this bias.

Since the 2000-01 data collection year, IPEDS data collections have been web-based. Data have been provided by "keyholders," institutional representatives appointed by campus chief executives, who are responsible for ensuring that survey data submitted by the institution are correct and complete. Because Title IV institutions are the primary focus of IPEDS and because these institutions are required to respond to IPEDS, response rates for Title IV institutions have been high (data on specific components are cited below). More details on the accuracy and reliability of IPEDS data can be found in the Integrated Postsecondary Education Data System Data Quality Study (NCES 2005-175).

Further information on IPEDS may be obtained from

## Richard Reeves

http://nces.ed.gov/ipeds

## Fall (12-Month Enrollment)

The 12-month period during which data are collected is July 1 through June 30. Data are collected by race/ethnicity, gender, and level of study (undergraduate or postbaccalaureate) and include unduplicated headcounts and instructional
activity (contact or credit hours). These data are also used to calculate a full-time-equivalent (FTE) enrollment based on instructional activity. FTE enrollment is useful for gauging the size of the educational enterprise at the institution. Prior to the 2007-08 IPEDS data collection, the data collected in the 12-Month Enrollment component were part of the Fall Enrollment component, which is conducted during the spring data collection period. However, to improve the timeliness of the data, a separate 12-Month Enrollment survey component was developed in 2007. These data are now collected in the fall for the previous academic year. The response rate for the 12-Month Enrollment component of the fall 2015 data collection was nearly 100 percent. Data from only 1 of 7,169 Title IV institutions that were expected to respond to this component contained item nonresponse, and these missing items were imputed.

Further information on the IPEDS 12-Month Enrollment component may be obtained from

## Fall (Completions)

This survey was part of the HEGIS series throughout its existence. However, the degree classification taxonomy was revised in 1970-71, 1982-83, 1991-92, 2002-03, and 2009-10. Collection of degree data has been maintained through IPEDS.

Degrees-conferred trend tables arranged by the 2009-10 classification are included in the Digest of Education Statistics to provide consistent data from 1970-71 through the most recent year. Data in this edition on associate's and other formal awards below the baccalaureate degree, by field of study, cannot be made comparable with figures from years prior to 1982-83. The nonresponse rate does not appear to be a significant source of nonsampling error for this survey. The response rate over the years has been high; for the fall 2015 Completions component, it rounded to 100 percent. Because of the high response rate, there was no need to conduct a nonresponse bias analysis. Imputation methods for the fall 2015 IPEDS Completions component are discussed in the 2015-16 Integrated Postsecondary Education Data System (IPEDS) Methodology Report (NCES 2016-111).

The Integrated Postsecondary Education Data System Data Quality Study (NCES 2005-175) indicated that most Title IV institutions supplying revised data on completions in 2003-04 were able to supply missing data for the prior year. The small differences between imputed data for the prior year and the revised actual data supplied by the institution indicated that the imputed values produced by NCES were acceptable.

Further information on the IPEDS Completions component may be obtained from

Imani Stutely<br>Postsecondary Branch<br>Administrative Data Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>imani.stutely@ed.gov<br>http://nces.ed.gov/ipeds

## Fall (Institutional Characteristics)

This survey collects the basic information necessary to classify institutions, including control, level, and types of programs offered, as well as information on tuition, fees, and room and board charges. Beginning in 2000, the survey collected institutional pricing data from institutions with firsttime, full-time, degree/certificate-seeking undergraduate students. Unduplicated full-year enrollment counts and instructional activity are now collected in the 12-Month Enrollment survey. Beginning in 2008-09, the student financial aid data collected include greater detail. The overall unweighted response rate was 100.0 percent for Title IV degree-granting institutions for 2009 data.

In the fall 2015 data collection, the response rate for the Institutional Characteristics component among all Title IV entities was 100.0 percent: Of the 7,252 Title IV entities expected to respond to this component, all responded.

The Integrated Postsecondary Education Data System Data Quality Study (NCES 2005-175) looked at tuition and price in Title IV institutions. Only 8 percent of institutions in 2002-03 and 2003-04 reported the same data to IPEDS and Thomson Peterson-a company providing information about institutions based on the institutions' voluntary data submissions-consistently across all selected data items. Differences in wordings or survey items may account for some of these inconsistencies.

Further information on the IPEDS Institutional Characteristics component may be obtained from

Winter (Student Financial Aid)
This component was part of the spring data collection from IPEDS data collection years $2000-01$ to 2010-11, but it moved to the winter data collection starting with the 2011-12 IPEDS data collection year. This move assists with the timing of the net price of attendance calculations displayed on College Navigator (http://nces.ed.gov/collegenavigator).

Financial aid data are collected for undergraduate students. Data are collected regarding federal grants, state and local government grants, institutional grants, and loans. The collected data include the number of students receiving each type of financial assistance and the average amount of aid received by type of aid. Beginning in 2008-09, student financial aid data collected includes greater detail on types of aid offered.

In the winter 2015-16 data collection, the Student Financial Aid component collected data about financial aid awarded to undergraduate students, with particular emphasis on fulltime, first-time degree/certificate-seeking undergraduate students awarded financial aid for the 2014-15 academic year. In addition, the component collected data on undergraduate and graduate students receiving benefits for veterans and members of the military service. Finally, student counts and awarded aid amounts were collected to calculate the net price of attendance for two subsets of full-time, first-time degree/ certificate-seeking undergraduate students: those awarded any grant aid, and those awarded Title IV aid.

The response rate for the Student Financial Aid component in 2015-16 rounded to 100 percent: Of the 7,092 Title IV institutions that were expected to respond, responses were missing for just 7 institutions.

Further information on the IPEDS Student Financial Aid component may be obtained from

## Winter (Graduation Rates and Graduation Rates 200 Percent)

In IPEDS data collection years 2012-13 and earlier, the Graduation Rates and 200 Percent Graduation Rates components were collected during the spring collection. In the IPEDS 2013-14 data collection year, however, the Graduation Rates and 200 Percent Graduation Rates collections were moved to the winter data collection.

The 2015-16 Graduation Rates component collected counts of full-time, first-time degree/certificate-seeking undergraduate students beginning their postsecondary education in the specified cohort year and their completion status as of 150 percent of normal program completion time at the same institution where the students started. If 150 percent of normal program completion time extended beyond August 31,2015 , the counts as of that date were collected. Four-year institutions used 2009 as the cohort year, while less-than-4year institutions used 2012 as the cohort year. Of the 6,353 institutions that were expected to respond to the Graduation Rates component, responses were missing for 4 institutions, resulting in a response rate that rounded to 100 percent.

The 2015-16 Graduation Rates 200 Percent component was designed to combine information reported in a prior collection via the Graduation Rates component with current information about the same cohort of students. From previously collected data, the following elements were obtained: the number of students entering the institution as full-time, first-time degree/certificate-seeking students in a cohort year; the number of students in this cohort completing within 100 and 150 percent of normal program completion time; and the number of cohort exclusions (such as students who left for military service). Then the count of additional cohort exclusions and additional program completers between 151 and 200 percent of normal program completion time was collected. Four-year institutions reported on bachelor's or equivalent degree-seeking students and used cohort year 2007 as the reference period, while less-than-4-year institutions reported on all students in the cohort and used cohort year 2011 as the reference period. Of the 5,869 institutions that were expected to respond to the Graduation Rates 200 Percent component, responses were missing for 4 institutions, resulting in a response rate that rounded to 100 percent.

Further information on the IPEDS Graduation Rates and 200 Percent Graduation Rates components may be obtained from

Andrew Mary<br>Postsecondary Branch<br>Administrative Data Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>andrew.mary @ed.gov<br>http://nces.ed.gov/ipeds/<br>\section*{Winter (Admissions)}

In the 2014-15 survey year, an Admissions component was added to the winter data collection. This component was created out of the admissions data that had previously been a part of the fall Institutional Characteristics component. The moving of these data into a new component in the winter collection enables all institutions to report data for the most recent fall period.

The Admissions component collects information about the selection process for entering first-time degree/certificateseeking undergraduate students. Data obtained from institutions include admissions considerations (e.g., secondary school records, admission test scores), the number of first-time degree/ certificate-seeking undergraduate students who applied, the number admitted, and the number enrolled. Admissions data were collected only from institutions that do not have an open admissions policy for entering first-time students. Data collected for the IPEDS winter 2015-16 Admissions component relate to individuals applying to be admitted during the fall of the 2015-16 academic year (the fall 2015 reporting period). Of the 2,184 Title IV institutions that were expected to respond to the Admissions component, all responded.

Spring (Academic Libraries)
From 1966 to 1988, the Academic Libraries Survey was conducted on a 3-year cycle as part of HEGIS. From 1988 to 1998, the survey was a part of IPEDS and conducted on a 2-year cycle. It remained on a 2-year cycle from 2000 to 2012, but during that period it was conducted independently of IPEDS. In 2014, the survey was reincorporated into IPEDS as the Academic Libraries component, with data collection occurring annually.

The Academic Libraries component collects information from degree-granting institutions on library collections, expenditures, and services. Institutions answer a screening question in the IPEDS Institutional Characteristics component to determine whether they should also respond to the Academic Libraries component. The component consists of two sections, one for institutions reporting any library expenditures and one for institutions reporting total library expenditures greater than $\$ 100,000$. Of the 4,518 institutions that were expected to respond to the Academic Libraries component in the IPEDS spring 2016 data collection, 4,517 provided data, resulting in a response rate rounding to 100 percent.

Further information on the IPEDS Academic Libraries component may be obtained from

## Spring (Fall Enrollment)

This survey has been part of the HEGIS and IPEDS series since 1966. Response rates have been relatively high, generally exceeding 85 percent. Beginning in 2000, with web-based data collection, higher response rates were attained. In the spring 2016 data collection, the Fall Enrollment component covered fall 2015. Of the 7,146 institutions that were expected to respond, 7,137 provided data, for a response rate that rounded to 100 percent. Data collection procedures for the Fall Enrollment component of the spring 2016 data collection are presented in Enrollment and Employees in Postsecondary Institutions, Fall 2015; and Financial Statistics and Academic Libraries, Fiscal Year 2015: First Look (Provisional Data) (NCES 2017-024).

Beginning with the fall 1986 survey and the introduction of IPEDS (see above), the survey was redesigned. The survey allows (in alternating years) for the collection of age and residence data. Beginning in 2000, the survey collected instructional activity and unduplicated headcount data, which are needed to compute a standardized, full-time-equivalent (FTE) enrollment statistic for the entire academic year. As of 2007-08, the timeliness of the instructional activity data has been improved by collecting these data in the fall as part of the 12-Month Enrollment component instead of in the spring as part of the Fall Enrollment component.

The Integrated Postsecondary Education Data System Data Quality Study (NCES 2005-175) showed that public institutions made the majority of changes to enrollment data during the 2004 revision period. The majority of changes were made to unduplicated headcount data, with the net differences between the original data and the revised data being about 1 percent. Part-time students in general and enrollment in private not-for-profit institutions were often underestimated. The fewest changes by institutions were to Classification of Instructional Programs (CIP) code data. (The CIP is a taxonomic coding scheme that contains titles and descriptions of primarily postsecondary instructional programs.)

aaliyeva@air.org
http://nces.ed.gov/ipeds

## Spring (Finance)

This survey was part of the HEGIS series and has been continued under IPEDS. Substantial changes were made in the financial survey instruments in fiscal year (FY) 1976, FY 1982, FY 1987, FY 1997, and FY 2002. While these changes were significant, a considerable effort has been made in this report to present only comparable information on trends and to note inconsistencies. The FY 1976 survey instrument contained numerous revisions to earlier survey forms, which made direct comparisons of line items very difficult. Beginning in FY 1982, Pell Grant data were collected in the categories of federal restricted grant and contract revenues and restricted scholarship and fellowship expenditures. The introduction of IPEDS in the FY 1987 survey included several important changes to the survey instrument and data processing procedures. Beginning in FY 1997, data for private institutions were collected using new financial concepts consistent with Financial Accounting Standards Board (FASB) reporting standards, which provide a more comprehensive view of college finance activities. The data for public institutions continued to be collected using the older survey form. The data for public and private institutions were no longer comparable and, as a result, no longer presented together in analysis tables. In FY 2001, public institu-
tions had the option of either continuing to report using Government Accounting Standards Board (GASB) standards or using the new FASB reporting standards. Beginning in FY 2002, public institutions could use either the original GASB standards, the FASB standards, or the new GASB Statement 35 standards (GASB35).

Possible sources of nonsampling error in the financial statistics include nonresponse, imputation, and misclassification. The unweighted response rate has been about 85 to 90 percent for most of the years these data appeared in the Digest of Education Statistics; however, in more recent years, response rates have been much higher because Title IV institutions are required to respond. Since 2002, the IPEDS data collection has been a full-scale web-based collection, which has improved the quality and timeliness of the data. For example, the ability of IPEDS to tailor online data entry forms for each institution based on characteristics such as institutional control, level of institution, and calendar system and the institutions' ability to submit their data online are aspects of fullscale web-based collections that have improved response.

The response rate for the FY 2015 Finance component was nearly 100 percent: Of the 7,223 institutions and administrative offices that were expected to respond, 7,183 provided data. Data collection procedures for the FY 2015 component are discussed in Enrollment and Employees in Postsecondary Institutions, Fall 2015; and Financial Statistics and Academic Libraries, Fiscal Year 2015: First Look (Provisional Data) (NCES 2017-024).

The Integrated Postsecondary Education Data System Data Quality Study (NCES 2005-175) found that only a small percentage ( 2.9 percent, or 168) of postsecondary institutions either revised 2002-03 data or submitted data for items they previously left unreported. Though relatively few institutions made changes, the changes made were relatively large-greater than 10 percent of the original data. With a few exceptions, these changes, large as they were, did not greatly affect the aggregate totals.

## Spring (Human Resources)

The Human Resources component was part of the IPEDS winter data collection from data collection years 2000-01 to 2011-12. For the 2012-13 data collection year, the Human Resources component was moved to the spring 2013 data collection, in order to give institutions more time to prepare their survey responses (the spring and winter collections begin on the same date, but the reporting deadline for the spring collection is several weeks later than the reporting deadline for the winter collection).

## IPEDS Collection Years 2012-13 and Later

In 2012-13, new occupational categories replaced the primary function/occupational activity categories previously used in the IPEDS Human Resources component. This change was required in order to align the IPEDS Human Resources categories with the 2010 Standard Occupational Classification (SOC) system. In tandem with the change in 2012-13 from using primary function/occupational activity categories to using the new occupational categories, the sections making up the IPEDS Human Resources component (which previously had been Employees by Assigned Position, Fall Staff, and Salaries) were changed to Full-Time Instructional Staff, Full-time Noninstructional Staff, Salaries, Part-Time Staff, and New Hires.

The webpage "Archived Changes-Changes to IPEDS Data Collections, 2012-13" (https://nces.ed.gov/ipeds/InsidePages/ ArchivedChanges? year=2012-13) provides information on the redesigned IPEDS Human Resources component. "Resources for Implementing Changes to the IPEDS Human Resources (HR) Survey Component Due to Updated 2010 Standard Occupational Classification (SOC) System" (https://nces.ed.gov/ ipeds/Section/resources soc) is a webpage containing additional information, including notes comparing the new classifications with the old ("Comparison of New IPEDS Occupational Categories with Previous Categories"), a crosswalk from the new IPEDS occupational categories to the 2010 SOC occupational categories ("New IPEDS Occupational Categories and 2010 SOC"), answers to frequently asked questions, and a link to current IPEDS Human Resources survey screens.

Of the 7,226 institutions and administrative offices that were expected to respond to the spring 2016 Human Resources component, 7,218 responded, for a response rate that rounded to 100 percent. Data collection procedures for this component are presented in Enrollment and Employees in Postsecondary Institutions, Fall 2015; and Financial Statistics and Academic Libraries, Fiscal Year 2015: First Look (Provisional Data) (NCES 2017-024).

## IPEDS Collection Years Prior to 2012-13

In collection years before 2001-02, IPEDS conducted a Fall Staff survey and a Salaries survey; in the 2001-02 collection year, the Employees by Assigned Position survey was added to IPEDS. In the 2005-06 collection year, these three surveys became sections of the IPEDS "Human Resources" component.

Data gathered by the Employees by Assigned Position section categorized all employees by full- or part-time status, faculty status, and primary function/occupational activity. Institutions with M.D. or D.O. programs were required to report their medical school employees separately. A response to the EAP was required of all 6,858 Title IV institutions and administrative offices in the United States and other jurisdictions for winter $2008-09$, and 6,845 , or 99.8 percent unweighted, responded. Of the 6,970 Title IV institutions and administrative offices required to respond to the winter 2009-10 EAP, 6,964, or 99.9 percent, responded. And of the 7,256 Title IV institutions and administrative offices required to respond to the EAP for winter 2010-11, 7,252, or 99.9 percent, responded.

The main functions/occupational activities of the EAP section were primarily instruction, instruction combined with research and/or public service, primarily research, primarily public service, executive/administrative/managerial, other professionals (support/service), graduate assistants, technical and paraprofessionals, clerical and secretarial, skilled crafts, and service/maintenance.

All full-time instructional faculty classified in the EAP full-time non-medical school part as either (1) primarily instruction or (2) instruction combined with research and/or public service were included in the Salaries section, unless they were exempt.

The Fall Staff section categorized all staff on the institution's payroll as of November 1 of the collection year by employment status (full time or part time), primary function/ occupational activity, gender, and race/ethnicity. These data elements were collected from degree-granting and non-degree-granting institutions; however, additional data elements were collected from degree-granting institutions and related administrative offices with 15 or more full-time staff. These elements include faculty status, contract length/teaching period, academic rank, salary class intervals, and newly hired full-time permanent staff.

The Fall Staff section, which was required only in oddnumbered reporting years, was not required during the 2008-09 Human Resources data collection. However, of the 6,858 Title IV institutions and administrative offices in the United States and other jurisdictions, 3,295, or 48.0 percent unweighted, did provide data in the Fall Staff section that year. During the 2009-10 Human Resources data collection, when all 6,970 Title IV institutions and administrative offices were required to respond to the Fall Staff section, 6,964 , or 99.9 percent, did so. A response to the Fall Staff section of the 2010-11 Human Resources collection was optional, and 3,364 Title IV institutions and administrative offices responded that year (a response rate of 46.3 percent).

The Integrated Postsecondary Education Data System Data Quality Study (NCES 2005-175) found that for 2003-04 employee data items, changes were made by 1.2 percent (77) of the institutions that responded. For all institutions making changes, the changes resulted in different employee counts. For both institutional and aggregate differences, however, the changes had little impact on the original employee count submissions. A large number of institutions reported different staff data to IPEDS and Thomson Peterson; however, the magnitude of the differences was small-usually no more than 17 faculty members for any faculty variable.

The Salaries section collected data for full-time instructional faculty (except those in medical schools in the EAP section, described above) on the institution's payroll as of November 1 of the collection year by contract length/teaching period, gender, and academic rank. The reporting of data by faculty status in the Salaries section was required from 4year degree-granting institutions and above only. Salary outlays and fringe benefits were also collected for full-time instructional staff on 9/10- and 11/12-month contracts/ teaching periods. This section was applicable to degreegranting institutions unless exempt.

Between 1966-67 and 1985-86, this survey differed from other HEGIS surveys in that imputations were not made for nonrespondents. Thus, there is some possibility that the salary averages presented in this report may differ from the results of a complete enumeration of all colleges and universities. Beginning with the surveys for 1987-88, the IPEDS data tabulation procedures included imputations for survey nonrespondents. The unweighted response rate for the 2008-09 Salaries survey section was 99.9 percent. The response rate for the 2009-10 Salaries section was 100.0 percent $(4,453$ of the 4,455 required institutions responded), and the response rate for $2010-11$ was 99.9 percent ( 4,561 of the 4,565 required institutions responded). Imputation methods for the 2010-11 Salaries survey section are discussed in Employees in Postsecondary Institutions, Fall 2010, and Salaries of Full-Time Instructional Staff, 2010-11 (NCES 2012-276).

Although data from this survey are not subject to sampling error, sources of nonsampling error may include computational errors and misclassification in reporting and processing. The electronic reporting system does allow corrections to prior-year reported or missing data, and this should help alleviate these problems. Also, NCES reviews individual institutions' data for internal and longitudinal consistency and contacts institutions to check inconsistent data.

The Integrated Postsecondary Education Data System Data Quality Study (NCES 2005-175) found that only 1.3 percent of the responding Title IV institutions in 2003-04 made changes to their salaries data. The differences between the imputed data and the revised data were small and found to have little impact on the published data.

Further information on the Human Resources component may be obtained from

## Library Statistics

In the past, NCES collected library data through the Public Libraries Survey (PLS), the State Library Agencies (StLA) Survey, the Academic Libraries Survey (ALS), and the Library Media Centers (LMC) Survey. On October 1, 2007, the administration of the Public Libraries Survey (PLS) and the State Library Agencies (StLA) Survey was transferred to the Institute of Museum and Library Services (IMLS) (see below).

NCES administered the Academic Libraries Survey (ALS) on a 3-year cycle between 1966 and 1988. From 1988 through 1999, ALS was a component of the Integrated Postsecondary Education Data System (IPEDS) and was on a 2-year cycle.

Beginning in the year 2000, ALS began collecting data independent from the IPEDS data collection, but it remained on a 2 -year cycle. ALS provided data on approximately 3,700 academic libraries. In aggregate, these data provided an overview of the status of academic libraries nationally and statewide. The survey collected data on the libraries in the entire universe of degree-granting institutions. Beginning with the collection of FY 2000 data, ALS changed to web-based data collection. ALS produced descriptive statistics on academic libraries in postsecondary institutions in the 50 states, the District of Columbia, and the outlying areas. Academic Libraries: 2012 (NCES 2014-038) presented tabulations for the 2012 survey, the most recent administration of ALS for which data are available. Since 2014, ALS has been reintegrated back into the IPEDS collection as the Academic Libraries component and is collected annually.

School library data were collected on the School and Principal Surveys of the 1990-91 Schools and Staffing Survey (SASS). The School Library Media Centers (LMC) Survey became a component of SASS with the 1993-94 administration of the survey. Thus, readers should refer to the section on the Schools and Staffing Survey, below, regarding data on school libraries. Data for the 2011-12 LMC Survey are available on the NCES website at http:// nces.ed.gov/surveys/sass/index.asp.

Further information on library statistics may be obtained from

Christopher Cody<br>Postsecondary Branch<br>Administrative Data Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>christopher.cody@ed.gov<br>http://nces.ed.gov/surveys/libraries

## National Adult Literacy Survey

The National Adult Literacy Survey (NALS), funded by the U.S. Department of Education and 12 states, was created in 1992 as a new measure of literacy. The aim of the survey was to profile the English literacy of adults in the United States based on their performance across a wide array of tasks that reflect the types of materials and demands they encounter in their daily lives.

To gather information on adults' literacy skills, trained staff interviewed a nationally representative sample of nearly 13,600 individuals ages 16 and over during the first 8 months of 1992. These participants had been randomly selected to represent the adult population in the country as a whole. Black and Hispanic households were oversampled to ensure reliable estimates of literacy proficiencies and to permit analyses of the performance of these subpopulations. In addition, some 1,100 inmates from 80 federal and state prisons were interviewed to gather information on the proficiencies of the prison population. In total, nearly 26,000 adults were surveyed.

Each survey participant was asked to spend approximately an hour responding to a series of diverse literacy tasks, as well as to questions about his or her demographic characteristics, educational background, reading practices, and other areas related to literacy. Based on their responses to the survey tasks, adults received proficiency scores along three scales that reflect varying degrees of skill in prose, document, and quantitative literacy. The results of the 1992 survey were first published in Adult Literacy in America: A First Look at the Findings of the National Adult Literacy Survey (NCES 93-275), in September 1993. See the section on the National Assessment of Adult Literacy (below) for information on later adult literacy surveys.

Sheida White
National Assessment Branch
Assessments Division
National Center for Education Statistics
550 12th Street SW
Washington, DC 20202
sheida.white@ed.gov
http://nces.ed.gov/naal/nals products.asp

## National Assessment of Adult Literacy

The 2003 National Assessment of Adult Literacy (NAAL) was conducted to measure both English literacy and health literacy. The assessment was administered to 19,000 adults (including 1,200 prison inmates) age 16 and over in all 50 states and the District of Columbia. Components of the assessment included a background questionnaire; a prison component that assesses the literacy skills of adults in federal and state prisons; the State Assessment of Adult Literacy (SAAL), a voluntary survey given in conjunction with NAAL; a health literacy component; the Fluency Addition to NAAL (FAN), an oral reading assessment; and the Adult Literacy Supplemental Assessment (ALSA). ALSA is an alternative to the main NAAL for those with very low scores on seven core screening questions. NAAL assesses literacy directly through the completion of tasks that covered quantitative literacy, document literacy, and prose literacy. Results were reported using the following achievement levels: Below Basic, Basic, Intermediate, and Proficient.

Results from NAAL and NALS can be compared. NALS offers a snapshot of the condition of literacy of the U.S. population as a whole and among key population subgroups in 1992. NAAL provides an updated picture of adult literacy skills in 2003, revealing changes in literacy over the intervening decade.

Further information on NAAL may be obtained from

[^158]
## National Assessment of Educational Progress

The National Assessment of Educational Progress (NAEP) is a series of cross-sectional studies initially implemented in 1969 to assess the educational achievement of U.S. students and monitor changes in those achievements. In the main national NAEP, a nationally representative sample of students is assessed at grades 4,8 , and 12 in various academic subjects. The assessment is based on frameworks developed by the National Assessment Governing Board (NAGB). It includes both multiplechoice items and constructed-response items (those requiring written answers). Results are reported in two ways: by average score and by achievement level. Average scores are reported for the nation, for participating states and jurisdictions, and for subgroups of the population. Percentages of students performing at or above three achievement levels (Basic, Proficient, and Advanced) are also reported for these groups.

## Main NAEP Assessments

From 1990 until 2001, main NAEP was conducted for states and other jurisdictions that chose to participate. In 2002, under the provisions of the No Child Left Behind Act of 2001, all states began to participate in main NAEP, and an aggregate of all state samples replaced the separate national sample. (School district-level assessments-under the Trial Urban District Assessment [TUDA] programalso began in 2002.)

Results are available for the mathematics assessments administered in 2000, 2003, 2005, 2007, 2009, 2011, 2013, and 2015. In 2005, NAGB called for the development of a new mathematics framework. The revisions made to the mathematics framework for the 2005 assessment were intended to reflect recent curricular emphases and better assess the specific objectives for students at each grade level.

The revised mathematics framework focuses on two dimensions: mathematical content and cognitive demand. By considering these two dimensions for each item in the assessment, the framework ensures that NAEP assesses an appropriate balance of content, as well as a variety of ways of knowing and doing mathematics.

Since the 2005 changes to the mathematics framework were minimal for grades 4 and 8 , comparisons over time can be made between assessments conducted before and after the framework's implementation for these grades. The changes that the 2005 framework made to the grade 12 assessment, however, were too drastic to allow grade 12 results from before and after implementation to be directly compared. These changes included adding more questions on algebra, data analysis, and probability to reflect changes in high school mathematics standards and coursework; merging the measurement and geometry content areas; and changing the reporting scale from 0-500 to $0-300$. For more information regarding the 2005 mathematics framework revisions, see http://nces.ed.gov/nationsreportcard/ mathematics/frameworkcomparison.asp.

Results are available for the reading assessments administered in 2000, 2002, 2003, 2005, 2007, 2009, 2011, 2013, and 2015. In 2009, a new framework was developed for the 4th-, 8th-, and 12th-grade NAEP reading assessments.

Both a content alignment study and a reading trend, or bridge, study were conducted to determine if the new reading assessment was comparable to the prior assessment. Overall, the results of the special analyses suggested that the assessments were similar in terms of their item and scale characteristics and the results they produced for important demographic groups of students. Thus, it was determined that the results of the 2009 reading assessment could still be compared to those from earlier assessment years, thereby maintaining the trend lines first established in 1992. For more information regarding the 2009 reading framework revisions, see http://nces.ed.gov/nationsreportcard/reading/ whatmeasure.asp.

In spring 2013, NAEP released results from the NAEP 2012 economics assessment in The Nation's Report Card: Economics 2012 (NCES 2013-453). First administered in 2006, the NAEP economics assessment measures 12thgraders' understanding of a wide range of topics in three main content areas: market economy, national economy, and international economy. The 2012 assessment is based on a nationally representative sample of nearly 11,000 students in the 12th grade.

In The Nation's Report Card: A First Look-2013 Mathematics and Reading (NCES 2014-451), NAEP released the results of the 2013 mathematics and reading assessments. Results can also be accessed using the interactive graphics and downloadable data available at the online Nation's Report Card website (http://nationsreportcard.gov/reading math 2013/\#/).

The Nation's Report Card: A First Look-2013 Mathematics and Reading Trial Urban District Assessment (NCES 2014-466) provides the results of the 2013 mathematics and reading TUDA, which measured the reading and mathematics progress of 4th- and 8th-graders from 21 urban school districts. Results from the 2013 mathematics and reading TUDA can also be accessed using the interactive graphics and downloadable data available at the online TUDA website (http:// nationsreportcard.gov/reading math tuda 2013/\#/).

The online interactive report The Nation's Report Card: 2014 U.S. History, Geography, and Civics at Grade 8 (NCES 2015-112) provides grade 8 results for the 2014 NAEP U.S. history, geography, and civics assessments. Trend results for previous assessment years in these three subjects, as well as information on school and student participation rates and sample tasks and student responses, are also presented.

In 2014, the first administration of the NAEP Technology and Engineering Literacy (TEL) Assessment asked 8thgraders to respond to questions aimed at assessing their knowledge and skill in understanding technological principles, solving technology and engineering-related problems, and using technology to communicate and collaborate. The online report The Nation's Report Card: Technology and Engineering Literacy (NCES 2016-119) presents national results for 8th-graders on the TEL assessment.

The Nation's Report Card: 2015 Mathematics and Reading Assessments (NCES 2015-136) is an online interactive report that presents national and state results for 4th- and 8th-graders on the NAEP 2015 mathematics and reading assessments. The report also presents TUDA results in mathematics and reading for 4th- and 8th-graders. The online interactive report The Nation's Report Card: 2015 Mathematics and Reading at Grade 12 (NCES 2016-018) presents grade 12 results from the NAEP 2015 mathematics and reading assessments.

Results from the 2015 NAEP science assessment are presented in the online report The Nation's Report Card: 2015 Science at Grades 4, 8, and 12 (NCES 2016-162). The assessment measures 4th-, 8th-, and 12th-graders' knowledge in three science content areas (physical science, life science, and Earth and space sciences) and their understanding of four science practices (identifying science principles, using science principles, using scientific inquiry, and using technological design). National results are reported for grades 4,8 , and 12 , and results from 46 participating states and one jurisdiction are reported for grades 4 and 8 . Since a new NAEP science framework was introduced in 2009, results from the 2015 science assessment can be compared to results from the 2009 and 2011 science assessments, but cannot be compared to the science assessments conducted prior to 2009.

NAEP is in the process of transitioning from paper-based assessments to technology-based assessments; consequently, data are needed regarding students' access to and familiarity with technology, at home and at school. The Computer Access and Familiarity Study (CAFS) is designed to fulfill this need. CAFS was conducted as part of the main administration of the 2015 NAEP. A subset of the grade 4, 8, and 12 students who took the main NAEP were chosen to take the additional CAFS questionnaire. The main 2015 NAEP was administered in a paper-and-pencil format to some students and a digital-based format to others, and CAFS participants were given questionnaires in the same format as their NAEP questionnaires.

## NAEP Long-Term Trend Assessments

In addition to conducting the main assessments, NAEP also conducts the long-term trend assessments. Long-term trend assessments provide an opportunity to observe educational progress in reading and mathematics of $9-, 13-$, and 17 -year-olds since the early 1970s. The long-term trend reading assessment measures students' reading comprehension skills using an array of passages that vary by text types and length. The assessment was designed to measure students' ability to locate specific information in the text provided; make inferences across a passage to provide an explanation; and identify the main idea in the text.

The NAEP long-term trend assessment in mathematics measures knowledge of mathematical facts; ability to carry out computations using paper and pencil; knowledge of basic formulas, such as those applied in geometric settings; and ability to apply mathematics to skills of daily life, such as those involving time and money.

The Nation's Report Card: Trends in Academic Progress 2012 (NCES 2013-456) provides the results of 12 long-term trend reading assessments dating back to 1971 and 11 longterm trend mathematics assessments dating back to 1973.

Further information on NAEP may be obtained from

## National Education Longitudinal Study of 1988

The National Education Longitudinal Study of 1988 (NELS:88) was the third major secondary school student longitudinal study conducted by NCES. The two studies that preceded NELS:88-the National Longitudinal Study of the High School Class of 1972 (NLS:72) and the High School and Beyond Longitudinal Study (HS\&B) in 1980-surveyed high school seniors (and sophomores in HS\&B) through high school, postsecondary education, and work and family formation experiences. Unlike its predecessors, NELS:88 began with a cohort of 8th-grade students. In 1988, some 25,000 8th-graders, their parents, their teachers, and their school principals were surveyed. Follow-ups were conducted in 1990 and 1992, when a majority of these students were in the 10th and 12th grades, respectively, and then 2 years after their scheduled high school graduation, in 1994. A fourth follow-up was conducted in 2000.

NELS:88 was designed to provide trend data about critical transitions experienced by young people as they develop, attend school, and embark on their careers. It complements and strengthens state and local efforts by furnishing new information on how school policies, teacher practices, and family involvement affect student educational outcomes (i.e., academic achievement, persistence in school, and participation in postsecondary education). For the base year, NELS:88 included a multifaceted student questionnaire, four cognitive tests, a parent questionnaire, a teacher questionnaire, and a school questionnaire.

In 1990, when most of the students were in 10th grade, students, school dropouts, their teachers, and their school principals were surveyed. (Parents were not surveyed in the 1990 follow-up.) In 1992, when most of the students were in 12th grade, the second follow-up conducted surveys of students, dropouts, parents, teachers, and school principals. Also, information from the students' transcripts was collected. The 1994 survey data were collected when most sample members had completed high school. The primary goals of the 1994 survey were (1) to provide data for trend comparisons with NLS:72 and HS\&B; (2) to address issues of employment and postsecondary access and choice; and (3)
to ascertain how many dropouts had returned to school and by what route. The 2000 follow-up examined the educational and labor market outcomes of the 1988 cohort at a time of transition. Most had been out of high school for 8 years; many had completed their postsecondary educations, were embarking on first or even second careers, and were starting families. For those who had attended postsecondary institutions after high school, student transcript data were collected from the institutions attended.

Further information on NELS:88 may be obtained from

## National Household Education Surveys Program

The National Household Education Surveys Program (NHES) is a data collection system that is designed to address a wide range of education-related issues. Surveys have been conducted in 1991, 1993, 1995, 1996, 1999, 2001, 2003, 2005, 2007, and 2012. NHES targets specific populations for detailed data collection. It is intended to provide more detailed data on the topics and populations of interest than are collected through supplements to other household surveys.

The topics addressed by NHES: 1991 were early childhood education and adult education. About 60,000 households were screened for NHES:1991. In the Early Childhood Education Survey, about 14,000 parents/guardians of 3- to 8 -year-olds completed interviews about their children's early educational experiences. Included in this component were participation in nonparental care/education; care arrangements and school; and family, household, and child characteristics. In the NHES:1991 Adult Education Survey, about 9,800 people 16 years of age and over, identified as having participated in an adult education activity in the previous 12 months, were questioned about their activities. Data were collected on programs and up to four courses, including the subject matter, duration, sponsorship, purpose, and cost. Information on the household and the adult's background and current employment was also collected.

In NHES:1993, nearly 64,000 households were screened. Approximately 11,000 parents of 3- to 7-year-olds completed interviews for the School Readiness Survey. Topics included the developmental characteristics of preschoolers; school adjustment and teacher feedback to parents for kindergartners and primary students; center-based program participation; early school experiences; home activities with family members; and health status. In the School Safety and Discipline Survey, about 12,700 parents of children in grades 3 to 12 and about 6,500 youth in grades 6 to 12 were
interviewed about their school experiences. Topics included the school learning environment, discipline policy, safety at school, victimization, the availability and use of alcohol/ drugs, and alcohol/drug education. Peer norms for behavior in school and substance use were also included in this topical component. Extensive family and household background information was collected, as well as characteristics of the school attended by the child.

In NHES:1995, the Early Childhood Program Participation Survey and the Adult Education Survey were similar to those fielded in 1991. In the Early Childhood component, about 14,000 parents of children from birth to 3rd grade were interviewed out of 16,000 sampled, for a completion rate of 90.4 percent. In the Adult Education Survey, about 24,000 adults were sampled and 82.3 percent $(20,000)$ completed the interview.

NHES:1996 covered parent and family involvement in education and civic involvement. Data on homeschooling and school choice also were collected. The 1996 survey screened about 56,000 households. For the Parent and Family Involvement in Education Survey, nearly 21,000 parents of children in grades 3 to 12 were interviewed. For the Civic Involvement Survey, about 8,000 youth in grades 6 to 12, about 9,000 parents, and about 2,000 adults were interviewed. The 1996 survey also addressed public library use. Adults in almost 55,000 households were interviewed to support state-level estimates of household public library use.

NHES: 1999 collected end-of-decade estimates of key indicators from the surveys conducted throughout the 1990s. Approximately 60,000 households were screened for a total of about 31,000 interviews with parents of children from birth through grade 12 (including about 6,900 infants, toddlers, and preschoolers) and adults age 16 or older not enrolled in grade 12 or below. Key indicators included participation of children in nonparental care and early childhood programs, school experiences, parent/family involvement in education at home and at school, youth community service activities, plans for future education, and adult participation in educational activities and community service.

NHES:2001 included two surveys that were largely repeats of similar surveys included in earlier NHES collections. The Early Childhood Program Participation Survey was similar in content to the Early Childhood Program Participation Survey fielded as part of NHES:1995, and the Adult Education and Lifelong Learning Survey was similar in content to the Adult Education Survey of NHES:1995. The Before- and AfterSchool Programs and Activities Survey, while containing items fielded in earlier NHES collections, had a number of new items that collected information about what school-age children were doing during the time they spent in child care or in other activities, what parents were looking for in care arrangements and activities, and parent evaluations of care arrangements and activities. Parents of approximately 6,700 children from birth through age 6 who were not yet in kindergarten completed Early Childhood Program Participation Survey interviews. Nearly 10,900 adults completed Adult Education and Lifelong Learning Survey interviews, and parents of nearly 9,600 children in kindergarten through grade 8
completed Before- and After-School Programs and Activities Survey interviews.

NHES:2003 included two surveys: the Parent and Family Involvement in Education Survey and the Adult Education for Work-Related Reasons Survey (the first administration). Whereas previous adult education surveys were more general in scope, this survey had a narrower focus on occupa-tion-related adult education programs. It collected in-depth information about training and education in which adults participated specifically for work-related reasons, either to prepare for work or a career or to maintain or improve workrelated skills and knowledge they already had. The Parent and Family Ilnvolvement Survey expanded on the first survey fielded on this topic in 1996. In 2003, screeners were completed with 32,050 households. About 12,700 of the 16,000 sampled adults completed the Adult Education for Work-Related Reasons Survey, for a weighted response rate of 76 percent. For the Parent and Family Involvement in Education Survey, interviews were completed by the parents of about 12,400 of the 14,900 sampled children in kindergarten through grade 12 , yielding a weighted unit response rate of 83 percent.

NHES:2005 included surveys that covered adult education, early childhood program participation, and after-school programs and activities. Data were collected from about 8,900 adults for the Adult Education Survey, from parents of about 7,200 children for the Early Childhood Program Participation Survey, and from parents of nearly 11,700 children for the After-School Programs and Activities Survey. These surveys were substantially similar to the surveys conducted in 2001, with the exceptions that the Adult Education Survey addressed a new topic-informal learning activities for personal interest-and the Early Childhood Program Participation Survey and After-School Programs and Activities Survey did not collect information about before-school care for school-age children.

NHES:2007 fielded the Parent and Family Involvement in Education Survey and the School Readiness Survey. These surveys were similar in design and content to surveys included in the 2003 and 1993 collections, respectively. New features added to the Parent and Family Involvement Survey were questions about supplemental education services provided by schools and school districts (including use of and satisfaction with such services), as well as questions that would efficiently identify the school attended by the sampled students. New features added to the School Readiness Survey were questions that collected details about TV programs watched by the sampled children. For the Parent and Family Involvement Survey, interviews were completed with parents of 10,680 sampled children in kindergarten through grade 12 , including 10,370 students enrolled in public or private schools and 310 homeschooled children. For the School Readiness Survey, interviews were completed with parents of 2,630 sampled children ages 3 to 6 and not yet in kindergarten. Parents who were interviewed about children in kindergarten through 2nd grade for the Parent and Family Involvement Survey were also asked some questions about these children's school readiness.

The 2007 and earlier administrations of NHES used a ran-dom-digit-dial sample of landline phones and computerassisted telephone interviewing to conduct interviews. However, due to declining response rates for all telephone surveys and the increase in households that only or mostly use a cell phone instead of a landline, the data collection method was changed to an address-based sample survey for NHES:2012. Because of this change in survey mode, readers should use caution when comparing NHES:2012 estimates to those of prior NHES administrations.

NHES:2012 included the Parent and Family Involvement in Education Survey and the Early Childhood Program Participation Survey. The Parent and Family Involvement in Education Survey gathered data on students who were enrolled in kindergarten through grade 12 or who were homeschooled at equivalent grade levels. Survey questions that pertained to students enrolled in kindergarten through grade 12 requested information on various aspects of parent involvement in education (such as help with homework, family activities, and parent involvement at school) and survey questions pertaining to homeschooled students requested information on the student's homeschooling experiences, the sources of the curriculum, and the reasons for homeschooling.

The 2012 Parent and Family Involvement in Education Survey questionnaires were completed for 17,563 (397 homeschooled and 17,166 enrolled) children, for a weighted unit response rate of 78.4 percent. The overall estimated unit response rate (the product of the screener unit response rate of 73.8 percent and the Parent and Family Involvement in Education Survey unit response rate) was 57.8 percent.

The 2012 Early Childhood Program Participation Survey collected data on the early care and education arrangements and early learning of children from birth through the age of 5 who were not yet enrolled in kindergarten. Questionnaires were completed for 7,893 children, for a weighted unit response rate of 78.7 percent. The overall estimated weighted unit response rate (the product of the screener weighted unit response rate of 73.8 percent and the Early Childhood Program Participation Survey unit weighted response rate) was 58.1 percent.

Data for the 2012 NHES Parent and Family Involvement in Education Survey are available in the First Look report, Parent and Family Involvement in Education, From the National Household Education Surveys Program of 2012 (NCES 2013028). Data for the 2012 NHES Early Childhood Program Participation Survey are available in the First Look report Early Childhood Program Participation, From the National Household Education Surveys Program of 2012 (NCES 2013-029).

## National Longitudinal Study of the High School Class of 1972

The National Longitudinal Study of the High School Class of 1972 (NLS:72) began with the collection of baseyear survey data from a sample of about 19,000 high school seniors in the spring of 1972. In each of the years 1973, 1974, 1976, 1979, and 1986, a follow-up survey of these students was conducted. NLS:72 was designed to provide the education community with information on the transitions of young adults from high school through postsecondary education and the workplace.

In addition to the follow-ups, a number of supplemental data collection efforts were made. For example, a Postsecondary Education Transcript Study (PETS) was conducted in 1984; in 1986, the fifth follow-up included a supplement for those who became teachers.

The sample design for NLS:72 was a stratified, two-stage probability sample of 12 th-grade students from all schools, public and private, in the 50 states and the District of Columbia during the 1971-72 school year. During the first stage of sampling, about 1,070 schools were selected for participation in the base-year survey. As many as 18 students were selected at random from each of the sample schools. The sizes of both the school and student samples were increased during the first follow-up survey. Beginning with the first follow-up and continuing through the fourth follow-up, about 1,300 schools participated in the survey and slightly fewer than 23,500 students were sampled. The unweighted response rates for each of the different rounds of data collection were 80 percent or higher.

Sample retention rates across the survey years were quite high. For example, of the individuals responding to the baseyear questionnaire, the percentages who responded to the first, second, third, and fourth follow-up questionnaires were about $94,93,89$, and 83 percent, respectively. The fifth follow-up took its sample from students who had participated in at least one of the prior surveys. In all, 91.7 percent of participants had responded to at least five of the six surveys, and 62.1 percent had responded to all six.

Further information on NLS:72 may be obtained from

Aurora D'Amico<br>Longitudinal Surveys Branch<br>Sample Surveys Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>aurora.damico@ed.gov<br>http://nces.ed.gov/surveys/nls72

## National Postsecondary Student Aid Study

The National Postsecondary Student Aid Study (NPSAS) is a comprehensive nationwide study of how students and their families pay for postsecondary education. Data gathered from the study are used to help guide future federal student financial aid policy. The study covers nationally representative samples of undergraduates, graduates, and first-professional students in
the 50 states, the District of Columbia, and Puerto Rico, including students attending less-than-2-year institutions, community colleges, and 4 -year colleges and universities. Participants include students who do not receive aid and those who do receive financial aid. Since NPSAS identifies nationally representative samples of student subpopulations of interest to policymakers and obtains baseline data for longitudinal study of these subpopulations, data from the study provide the base-year sample for the Beginning Postsecondary Students (BPS) longitudinal study and the Baccalaureate and Beyond (B\&B) longitudinal study.

Originally, NPSAS was conducted every 3 years. Beginning with the 1999-2000 study (NPSAS:2000), NPSAS has been conducted every 4 years. NPSAS:08 included a new set of instrument items to obtain baseline measures of the awareness of two new federal grants introduced in 2006: the Academic Competitiveness Grant (ACG) and the National Science and Mathematics Access to Retain Talent (SMART) grant.

The first NPSAS (NPSAS:87) was conducted during the 1986-87 school year. Data were gathered from about 1,100 colleges, universities, and other postsecondary institutions; 60,000 students; and 14,000 parents. These data provided information on the cost of postsecondary education, the distribution of financial aid, and the characteristics of both aided and nonaided students and their families.

For NPSAS:93, information on 77,000 undergraduates and graduate students enrolled during the school year was collected at 1,000 postsecondary institutions. The sample included students who were enrolled at any time between July 1, 1992, and June 30, 1993. About 66,000 students and a subsample of their parents were interviewed by telephone. NPSAS:96 contained information on more than 48,000 undergraduate and graduate students from about 1,000 postsecondary institutions who were enrolled at any time during the 1995-96 school year. NPSAS:2000 included nearly 62,000 students ( 50,000 undergraduates and almost 12,000 graduate students) from 1,000 postsecondary institutions. NPSAS:04 collected data on about 80,000 undergraduates and 11,000 graduate students from 1,400 postsecondary institutions. For NPSAS:08, about 114,000 undergraduate students and 14,000 graduate students who were enrolled in postsecondary education during the 2007-08 school year were selected from more than 1,730 postsecondary institutions.

NPSAS:12 sampled about 95,000 undergraduates and 16,000 graduate students from approximately 1,500 postsecondary institutions. Public access to the data is available online through PowerStats (http://nces.ed.gov/datalab/).

Further information on NPSAS may be obtained from

[^159]
## National Study of Postsecondary Faculty

The National Study of Postsecondary Faculty (NSOPF) was designed to provide data about faculty to postsecondary researchers, planners, and policymakers. NSOPF is the most comprehensive study of faculty in postsecondary education institutions ever undertaken.

The first cycle of NSOPF (NSOPF:88) was conducted by NCES with support from the National Endowment for the Humanities (NEH) in 1987-88 with a sample of 480 colleges and universities, over 3,000 department chairpersons, and over 11,000 instructional faculty. The second cycle of NSOPF (NSOPF:93) was conducted by NCES with support from NEH and the National Science Foundation in 1992-93. NSOPF:93 was limited to surveys of institutions and faculty, but with a substantially expanded sample of 970 colleges and universities and 31,350 faculty and instructional staff. The third cycle, NSPOF:99, included 960 degree-granting postsecondary institutions and approximately 18,000 faculty and instructional staff. The fourth cycle of NSOPF was conducted in 2003-04 and included 1,080 degree-granting postsecondary institutions and approximately 26,000 faculty and instructional staff.

There are no plans to repeat the study. Rather, NCES plans to provide technical assistance to state postsecondary data systems and to encourage the development of robust connections between faculty and student data systems so that key questions concerning faculty, instruction, and student outcomes-such as persistence and completion-can be addressed.

Further information on NSOPF may be obtained from

Aurora D'Amico<br>Longitudinal Surveys Branch<br>Sample Surveys Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>aurora.damico@ed.gov<br>http://nces.ed.gov/surveys/nsopf

## Principal Follow-up Survey

The Principal Follow-up Survey (PFS) is a component of the 2011-12 Schools and Staffing Survey (SASS). The 2012-13 PFS was administered in order to provide attrition rates for principals in $\mathrm{K}-12$ public and private schools. The goal was to assess how many of those who worked as a principal in the 2011-12 school year still worked as a principal in the same school in the 2012-13 school year, how many had moved to become a principal in another school, and how many no longer worked as a principal. The PFS sample included all schools whose principals had completed SASS principal questionnaires. Schools that had returned a completed 2011-12 SASS principal questionnaire were mailed the PFS form in March 2013.

Further information on the PFS may be obtained from

Isaiah O'Rear<br>Cross-Sectional Surveys Branch<br>Sample Surveys Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>isaiah.orear@ed.gov<br>http://nces.ed.gov/surveys/sass/

## Private School Universe Survey

The purposes of the Private School Universe Survey (PSS) data collection activities are (1) to build an accurate and complete list of private schools to serve as a sampling frame for NCES sample surveys of private schools and (2) to report data on the total number of private schools, teachers, and students in the survey universe. Begun in 1989, the PSS has been conducted every 2 years, and data for the 1989-90, 1991-92, 1993-94, 1995-96, 1997-98, 1999-2000, 2001-02, 2003-04, 2005-06, 2007-08, 2009-10, 2011-12, and 2013-14 school years have been released. A First Look report on the 2013-14 PSS data, Characteristics of Private Schools in the United States: Results From the 2013-14 Private School Universe Survey (NCES 2016-243) was published in November 2016.

The PSS produces data similar to that of the Common Core of Data for public schools, and can be used for publicprivate comparisons. The data are useful for a variety of policy- and research-relevant issues, such as the growth of religiously affiliated schools, the number of private high school graduates, the length of the school year for various private schools, and the number of private school students and teachers.

The target population for this universe survey is all private schools in the United States that meet the PSS criteria of a private school (i.e., the private school is an institution that provides instruction for any of grades K through 12, has one or more teachers to give instruction, is not administered by a public agency, and is not operated in a private home).

The survey universe is composed of schools identified from a variety of sources. The main source is a list frame initially developed for the 1989-90 PSS. The list is updated regularly by matching it with lists provided by nationwide private school associations, state departments of education, and other national guides and sources that list private schools. The other source is an area frame search in approximately 124 geographic areas, conducted by the U.S. Census Bureau.

Of the 40,302 schools included in the 2009-10 sample, 10,229 were found ineligible for the survey. Those not responding numbered 1,856 , and those responding numbered 28,217. The unweighted response rate for the 2009-10 PSS survey was 93.8 percent.

Of the 39,325 schools included in the 2011-12 sample, 10,030 cases were considered as out-of-scope (not eligible
for the PSS). A total of 26,983 private schools completed a PSS interview ( 15.8 percent completed online), while 2,312 schools refused to participate, resulting in an unweighted response rate of 92.1 percent.

There were 40,298 schools in the 2013-14 sample; of these, 10,659 were considered as out-of-scope (not eligible for the PSS). A total of 24,566 private schools completed a PSS interview ( 34.1 percent completed online), while 5,073 schools refused to participate, resulting in an unweighted response rate of 82.9 percent.

Further information on the PSS may be obtained from

## Projections of Education Statistics

Since 1964, NCES has published projections of key statistics for elementary and secondary schools and higher education institutions. The latest report is titled Projections of Education Statistics to 2024 (NCES 2016-013). The Projections of Education Statistics series uses projection models for elementary and secondary enrollment, high school graduates, elementary and secondary teachers, expenditures for public elementary and secondary education, enrollment in postsecondary degree-granting institutions, and postsecondary degrees conferred to develop national and state projections. These models are described more fully in the report's appendix on projection methodology.

Differences between the reported and projected values are, of course, almost inevitable. An evaluation of past projections revealed that, at the elementary and secondary level, projections of enrollments have been quite accurate: mean absolute percentage differences for enrollment ranged from 0.3 to 1.3 percent for projections from 1 to 5 years in the future, while those for teachers were less than 3 percent. At the higher education level, projections of enrollment have been fairly accurate: mean absolute percentage differences were 5 percent or less for projections from 1 to 5 years into the future.

Further information on Projections of Education Statistics may be obtained from

## Recent College Graduates Study

Between 1976 and 1991, NCES conducted periodic surveys of baccalaureate and master's degree recipients 1 year after graduation with the Recent College Graduates (RCG) Study. The RCG Study-which was replaced by the Baccalaureate and Beyond Longitudinal Study (B\&B) in 1993 (see listing above)-concentrated on those graduates entering the teaching profession. The study linked respondents' major field of study with outcomes such as whether the respondent entered the labor force or was seeking additional education. Labor force data collected included employment status (unemployed, employed part time, or employed full time), occupation, salary, career potential, relation to major field of study, and need for a college degree. To obtain accurate results on teachers, NCES oversampled graduates with a major in education. The last two studies oversampled education majors and increased the sampling of graduates with majors in other fields.

For each of the selected institutions, a list of graduates by major field of study was obtained, and a sample of graduates was drawn by major field of study. Graduates in certain major fields of study (e.g., education, mathematics, and physical sciences) were sampled at higher rates than were graduates in other fields. Roughly 1 year after graduation, the sample of graduates was located, contacted by mail or telephone, and asked to respond to the questionnaire.

The locating process was more detailed than that in most surveys. Nonresponse rates were directly related to the time, effort, and resources used in locating graduates, rather than to graduates' refusals to participate. Despite the difficulties in locating graduates, RCG response rates are comparable to studies that do not face problems locating their sample membership.

The 1976 study of 1974-75 college graduates was the first, and smallest, of the series. The sample consisted of about 210 institutions, of which 200 ( 96 percent) responded. Of the approximately 5,850 graduates in the sample, 4,350 responded, for a response rate of 79 percent.

The 1981 study was somewhat larger than the 1976 study, covering about 300 institutions and 15,850 graduates. Responses were obtained from 280 institutions, for an institutional response rate of 95 percent, and from 9,310 graduates (about 720 others were found not to meet eligibility requirements), for a response rate of 74 percent.

The 1985 study sampled about 400 colleges and 18,740 graduates, of whom 17,850 were found to be eligible. Responses were obtained from 13,200 graduates, for a response rate of 78 percent. The response rate for colleges was 98 percent. The 1987 study sampled 21,960 graduates. Responses were received from 16,880 , for a response rate of nearly 80 percent.

The 1991 study sampled about 18,140 graduates of 400 bachelor's and master's degree-granting institutions, including 16,170 bachelor's degree recipients and 1,960 master's degree recipients receiving diplomas between July 1, 1989, and June 30, 1990. Random samples of graduates were
selected from lists stratified by field of study. Graduates in education, mathematics, and the physical sciences were sampled at a higher rate, as were graduates of various racial/ ethnic groups, to provide a sufficient number of these graduates for analysis purposes. The graduates included in the sample were selected in proportion to the institution's number of graduates. The unweighted institutional response rate was 95 percent, and the unweighted graduate response rate was 83 percent.

Further information on the RCG Study may be obtained from

Aurora D'Amico<br>Longitudinal Surveys Branch<br>Sample Surveys Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>aurora.damico@ed.gov<br>http://nces.ed.gov/surveys/b\&b

## School Survey on Crime and Safety

The most recent School Survey on Crime and Safety (SSOCS) was conducted by NCES in spring/summer of the 2009-10 school year. SSOCS focuses on incidents of specific crimes/offenses and a variety of specific discipline issues in public schools. It also covers characteristics of school policies, school violence prevention programs and policies, and school characteristics that have been associated with school crime. The survey was conducted with a nationally representative sample of regular public elementary, middle, and high schools in the 50 states and the District of Columbia. Special education, alternative, and vocational schools; schools in the other jurisdictions; and schools that taught only prekindergarten, kindergarten, or adult education were not included in the sample.

The sampling frame for the 2010 SSOCS was constructed from the 2007-08 Public Elementary/Secondary School Universe File of the Common Core of Data, an annual collection of data on all public K-12 schools and school districts. The sample was stratified by instructional level, type of locale (urbanicity), and enrollment size. The sample of schools in each instructional level was allocated to each of the 16 cells formed by the cross-classification of the four categories of enrollment size and four types of locale. The sample was allocated to each subgroup in proportion to the sum of the square roots of the total student enrollment in each school in that stratum. The effective sample size within each stratum was then inflated to account for nonresponse. Once the final sample sizes were determined for each of the 64 strata, the subgroups were sorted by region and racial/ethnic composition of enrollment, and an initial sample of 3,476 schools was selected. Of those schools, 2,648 completed the survey. In February 2010, questionnaires were mailed to school principals, who were asked to complete the survey or to have it completed by the person at the school most knowledgeable about discipline issues.

Further information about SSOCS may be obtained from

## Schools and Staffing Survey

The Schools and Staffing Survey (SASS) is a set of related questionnaires that collect descriptive data on the context of public and private elementary and secondary education. Data reported by districts, schools, principals, and teachers provide a variety of statistics on the condition of education in the United States that may be used by policymakers and the general public. The SASS system covers a wide range of topics, including teacher demand, teacher and principal characteristics, teachers' and principals' perceptions of school climate and problems in their schools, teacher and principal compensation, district hiring and retention practices, general conditions in schools, and basic characteristics of the student population.

SASS data are collected through a mail questionnaire with telephone and in-person field follow-up. SASS has been conducted by the Census Bureau for NCES since the first administration of the survey, which was conducted during the 1987-88 school year. Subsequent SASS administrations were conducted in 1990-91, 1993-94, 1999-2000, 2003-04, 2007-08, and 2011-12.

SASS is designed to produce national, regional, and state estimates for public elementary and secondary schools, school districts, principals, teachers, and school library media centers and national and regional estimates for public charter schools, as well as principals, teachers, and school library media centers within these schools. For private schools, the sample supports national, regional, and affiliation estimates for schools, principals, and teachers.

From its inception, SASS has had four core components: school questionnaires, teacher questionnaires, principal questionnaires, and school district (prior to 1999-2000, "teacher demand and shortage") questionnaires. A fifth component, school library media center questionnaires, was introduced in the 1993-94 administration and has been included in every subsequent administration of SASS. School library data were also collected in the 1990-91 administration of the survey through the school and principal questionnaires.

School questionnaires used in SASS include the Public and Private School Questionnaires; teacher questionnaires include the Public and Private School Teacher Questionnaires; principal questionnaires include the Public and Private School Principal (or School Administrator) Questionnaires; and school district questionnaires include the School District (or Teacher Demand and Shortage) Questionnaires.

Although the four core questionnaires and the school library media questionnaires have remained relatively stable over the various administrations of SASS, the survey has changed to accommodate emerging issues in elementary and secondary education. Some questionnaire items have been added, some have been deleted, and some have been reworded.

During the 1990-91 SASS cycle, NCES worked with the Office of Indian Education to add an Indian School Questionnaire to SASS, and it remained a part of SASS through 2007-08. The Indian School Questionnaire explores the same school-level issues that the Public and Private School Questionnaires explore, allowing comparisons among the three types of schools. The 1990-91, 1993-94, 1999-2000, 2003-04, and 2007-08 administrations of SASS obtained data on Bureau of Indian Education (BIE) schools (schools funded or operated by the BIE), but the 2011-12 administration did not obtain BIE data. SASS estimates for all survey years presented in this report exclude BIE schools, and as a result, estimates in this report may differ from those in previously published reports.

School library media center questionnaires were administered in public, private, and BIE schools as part of the 1993-94 and 1999-2000 SASS. During the 2003-04 administration of SASS, only library media centers in public schools were surveyed, and in 2007-08 only library media centers in public schools and BIE and BIE-funded schools were surveyed. The 2011-12 survey collected data only on school library media centers in traditional public schools and in public charter schools. School library questions focused on facilities, services and policies, staffing, technology, information literacy, collections and expenditures, and media equipment. New or revised topics included access to online licensed databases, resource availability, and additional elements on information literacy. The Student Records and Library Media Specialist/Librarian Questionnaires were administered only in 1993-94.

As part of the 1999-2000 SASS, the Charter School Questionnaire was sent to the universe of charter schools in operation in 1998-99. In 2003-04 and in subsequent administrations of SASS, there was no separate questionnaire for charter schools-charter schools were included in the public school sample instead. Another change in the 2003-04 administration of SASS was a revised data collection procedure using a primary in-person contact within the school intended to reduce the field follow-up phase.

The SASS teacher surveys collect information on the characteristics of teachers, such as their age, race/ethnicity, years of teaching experience, average number of hours per week spent on teaching activities, base salary, average class size, and highest degree earned. These teacher-reported data may be combined with related information on their school's characteristics, such as school type (e.g., public traditional, public charter, Catholic, private other religious, and private nonsectarian), community type, and school enrollment size. The teacher questionnaires also ask for information on teacher opinions regarding the school and teaching environment. In 1993-94, about 53,000 public school teachers and

10,400 private school teachers were sampled. In 1999-2000, about 56,300 public school teachers, 4,400 public charter school teachers, and 10,800 private school teachers were sampled. In 2003-04, about 52,500 public school teachers and 10,000 private school teachers were sampled. In 2007-08, about 48,400 public school teachers and 8,200 private school teachers were sampled. In 2011-12, about 51,100 public school teachers and 7,100 private school teachers were sampled. Weighted overall response rates in 2011-12 were 61.8 percent for public school teachers and 50.1 percent for private school teachers.

The SASS principal surveys focus on such topics as age, race/ethnicity, sex, average annual salary, years of experience, highest degree attained, perceived influence on decisions made at the school, and hours spent per week on all school activities. These data on principals can be placed in the context of other SASS data, such as the type of the principal's school (e.g., public traditional, public charter, Catholic, other religious, or nonsectarian), enrollment, and percentage of students eligible for free or reduced-price lunch. In 2003-04, about 10,200 public school principals were sampled, and in 2007-08, about 9,800 public school principals were sampled. In 2011-12, about 11,000 public school principals and 3,000 private school principals were sampled. Weighted response rates in 2011-12 for public school principals and private school principals were 72.7 percent and 64.7 percent, respectively.

The SASS 2011-12 sample of schools was confined to the 50 states and the District of Columbia and excludes the other jurisdictions, the Department of Defense overseas schools, the BIE schools, and schools that do not offer teacher-provided classroom instruction in grades $1-12$ or the ungraded equivalent. The SASS 2011-12 sample included 10,250 traditional public schools, 750 public charter schools, and 3,000 private schools.

The public school sample for the 2011-12 SASS was based on an adjusted public school universe file from the 2009-10 Common Core of Data, a database of all the nation's public school districts and public schools. The private school sample for the 2011-12 SASS was selected from the 2009-10 Private School Universe Survey (PSS), as updated for the 2011-12 PSS. This update collected membership lists from private school associations and religious denominations, as well as private school lists from state education departments. The 2011-12 SASS private school frame was further augmented by the inclusion of additional schools that were identified through the 2009-10 PSS area frame data collection.

The NCES data product 2011-12 Schools and Staffing Survey (SASS) Restricted-Use Data Files (NCES 2014-356) is available. (Information on how to obtain a restricted-use data license is located at http://nces.ed.gov/pubsearch/licenses.asp.) This DVD contains eight files (Public School District, Public School Principal, Public School, Public School Teacher, Public School Library Media Center, Private School Principal, Private School, and Private School Teacher) in multiple formats. It also contains a six-volume User's Manual, which includes a codebook for each file.

## Teacher Follow-up Survey

The Teacher Follow-up Survey (TFS) is a follow-up survey of selected elementary and secondary school teachers who participate in the NCES Schools and Staffing Survey (SASS). Its purpose is to determine how many teachers remain at the same school, move to another school, or leave the profession in the year following a SASS administration. It is administered to elementary and secondary teachers in the 50 states and the District of Columbia. The TFS uses two questionnaires, one for teachers who left teaching since the previous SASS administration and another for those who are still teaching either in the same school as last year or in a different school. The objective of the TFS is to focus on the characteristics of each group in order to answer questions about teacher mobility and attrition.

The 2008-09 TFS is different from any previous TFS administration in that it also serves as the second wave of a longitudinal study of first-year teachers. Because of this, the 2008-09 TFS consists of four questionnaires. Two are for respondents who were first-year public school teachers in the 2007-08 SASS and two are for the remainder of the sample.

The 2012-13 TFS sample was made up of teachers who had taken the 2011-12 SASS survey. The 2012-13 TFS sample contained about 5,800 public school teachers and 1,200 private school teachers. The weighted overall response rate using the initial basic weight for private school teachers was notably low ( 39.7 percent), resulting in a decision to exclude private school teachers from the 2012-13 TFS data files. The weighted overall response rate for public school teachers was 49.9 percent ( 50.3 percent for current and 45.6 percent for former teachers). Further information about the 2012-13 TFS, including the analysis of unit nonresponse bias, is available in the First Look report Teacher Attrition and Mobility: Results From the 2012-13 Teacher Follow-up Survey (NCES 2014-077).

Further information on the TFS may be obtained from

## Other Department of Education Agencies

## National Center for Special Education Research

The National Center for Special Education Research (NCSER) was created as part of the reauthorization of the Individuals with Disabilities Education Act (IDEA). NCSER sponsors a program of special education research designed to expand the knowledge and understanding of infants, toddlers, and children with disabilities. NCSER funds programs of research that address its mission. In order to determine which programs work, as well as how, why, and in what settings they work, NCSER sponsors research on the needs of infants, toddlers, and children with disabilities and evaluates the effectiveness of services provided through IDEA.

Further information on NCSER may be obtained from

```

http://ies.ed.gov/ncser/
```

## The National Longitudinal Transition Study-2

Funded by NCSER, the National Longitudinal Transition Study-2 (NLTS-2) was a follow-up of the original National Longitudinal Transition Study conducted from 1985 through 1993. NLTS-2 began in 2001 with a sample of students who received special education services, were ages 13 through 16, and were in at least 7th grade on December 1, 2000. The study was designed to provide a national picture of these youths' experiences and achievements as they transition into adulthood. Data were collected from parents, youth, and schools by survey, telephone interviews, student assessments, and transcripts.

NLTS-2 was designed to align with the original NLTS by including many of the same questions and data items, thus allowing comparisons between the NLTS and NLTS-2 youths' experiences. NLTS-2 also included items that have been collected in other national databases to permit comparisons between NLTS-2 youth and the general youth population. Information was collected over five waves, beginning in 2001 and ending in 2009.

Further information on NLTS-2 may be obtained from

Jacquelyn Buckley<br>Office of the Commissioner<br>National Center for Special Education Research<br>555 New Jersey Avenue NW<br>Washington, DC 20208<br>jacquelyn.buckley@ed.gov<br>http://www.nlts2.org/

## Office for Civil Rights

## Civil Rights Data Collection

The U.S. Department of Education's Office for Civil Rights (OCR) has surveyed the nation's public elementary and secondary schools since 1968. The survey was first known as the OCR Elementary and Secondary School (E\&S) Survey; in 2004, it was renamed the Civil Rights Data Collection (CRDC). The survey collects data on school discipline, access to and participation in high-level mathematics and science courses, teacher characteristics, school finances, and other school characteristics. These data are reported by race/ethnicity, sex, and disability.

Data in the survey are collected pursuant to 34 C.F.R. Section 100.6(b) of the Department of Education regulation implementing Title VI of the Civil Rights Act of 1964. The requirements are also incorporated by reference in Department regulations implementing Title IX of the Education Amendments of 1972, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975. School, district, state, and national data are currently available. Data from individual public schools and districts are used to generate national and state data.

The CRDC has generally been conducted biennially in each of the 50 states plus the District of Columbia. The 2009-10 CRDC was collected from a sample of approximately 7,000 school districts and over 72,000 schools in those districts. It was made up of two parts: part 1 contained beginning-of-year "snapshot" data and part 2 contained cumulative, or end-of-year, data.

The 2011-12 CRDC survey, which collected data from approximately 16,500 school districts and 97,000 schools, was the first CRDC survey since 2000 that included data from every public school district and school in the nation. The 2013-14 CRDC survey also collected information from a universe of every public school district and school in the nation.

Further information on the Civil Rights Data Collection may be obtained from

Office for Civil Rights
U.S. Department of Education

400 Maryland Avenue SW
Washington, DC 20202

http://www.ed.gov/about/offices/list/ocr/data.html

## Office of Federal Student Aid

## Cohort Default Rate Database

A school's cohort default rate is the percentage of the school's borrowers who enter repayment on certain Federal Family Education Loan (FFEL) program or William D. Ford Federal Direct Loan (Direct Loan) program loans during a particular federal fiscal year and default within the cohort default period. The 2-year cohort default period is the period
that begins on October 1 of the fiscal year when the borrower enters repayment and ends on September 30 of the following fiscal year. The 3-year cohort default period is the period that begins on October 1 of the fiscal year when the borrower enters repayment and ends on September 30 of second fiscal year following the fiscal year in which the borrower entered repayment.

The Office of Federal Student Aid's cohort default rate database can be accessed at https://nslds.ed.gov/nslds/nslds SA/ defaultmanagement/search cohort 3 yr CY $2013 . \mathrm{cfm}$.

Further information about cohort default rates produced by the Office of Federal Student Aid may be obtained from

## Office of Special Education Programs

## Annual Report to Congress on the Implementation of the Individuals with Disabilities Education Act

The Individuals with Disabilities Education Act (IDEA) is a law ensuring services to children with disabilities throughout the nation. IDEA governs how states and public agencies provide early intervention, special education, and related services to more than 6.5 million eligible infants, toddlers, children, and youth with disabilities.

IDEA, formerly the Education of the Handicapped Act (EHA), requires the Secretary of Education to transmit, on an annual basis, a report to Congress describing the progress made in serving the nation's children with disabilities. This annual report contains information on children served by public schools under the provisions of Part B of IDEA and on children served in state-operated programs for persons with disabilities under Chapter I of the Elementary and Secondary Education Act.

Statistics on children receiving special education and related services in various settings and school personnel providing such services are reported in an annual submission of data to the Office of Special Education Programs (OSEP) by the 50 states, the District of Columbia, the Bureau of Indian Education schools, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, the U.S. Virgin Islands, the Federated States of Micronesia, Palau, and the Marshall Islands. The child count information is based on the number of children with disabilities receiving special education and
related services on December 1 of each year. Count information is available from http://www.ideadata.org.

Since all participants in programs for persons with disabilities are reported to OSEP, the data are not subject to sampling error. However, nonsampling error can arise from a variety of sources. Some states only produce counts of students receiving special education services by disability category because Part B of the EHA requires it. In those states that typically produce counts of students receiving special education services by disability category without regard to EHA requirements, definitions and labeling practices vary.

Further information on this annual report to Congress may be obtained from

## Office of Career, Technical, and Adult Education, Division of Adult Education and Literacy

## Enrollment Data for State-Administered Adult Education Programs

The Division of Adult Education and Literacy (DAEL) promotes programs that help American adults get the basic skills they need to be productive workers, family members, and citizens. The major areas of support are Adult Basic Education, Adult Secondary Education, and English Language Acquisition. These programs emphasize basic skills such as reading, writing, math, English language competency, and problem solving. Each year, DAEL reports enrollment numbers in state-administered adult education programs for these major areas of support for all 50 states, the District of Columbia, American Samoa, the Federated States of Micronesia, Guam, the Marshall Islands, the Northern Mariana Islands, Palau, Puerto Rico, and the U.S. Virgin Islands.

Further information on DAEL may be obtained from
Office of Career, Technical, and Adult Education Division of Adult Education and Literacy

## Other Governmental Agencies and Programs

## Bureau of Economic Analysis

## National Income and Product Accounts

The National Income and Product Accounts (NIPAs), produced by the Bureau of Economic Analysis, are a set of economic accounts that provide information on the value and composition of output produced in the United States during a given period. NIPAs present measures of economic activity in the United States, including production, income distribution, and personal savings. NIPAs also include data on employee compensation and wages. These estimations were first calculated in the early 1930s to help the government design economic policies to combat the Great Depression. Most of the NIPA series are published quarterly, with annual reviews of estimates from the three most recent years conducted in the summer.

Revisions to the NIPAs have been made over the years to create a more comprehensive economic picture of the United States. For example, in 1976, consumption of fixed capital (CFC) estimates shifted to a current-cost basis. In 1991, NIPAs began to use gross domestic product (GDP) instead of gross national product (GNP) as the primary measure of U.S. production. (At that time, virtually all other countries were already using GDP as their primary measure of production.) In the 2003 comprehensive revision, a more complete and accurate measure of insurance services was adopted. The incorporation of a new classification system for personal consumption expenditures (PCE) was among the changes contained in the 2009 comprehensive revision. The comprehensive revision of 2013 included the treatment of research and development expenditures by business, government, and nonprofit institutions serving households as fixed investment. The most recent update, which occurred in 2016, was the result of the incorporation of newly available and revised source data and the adoption of improved estimating methods.

NIPAs are slowly being integrated with other federal account systems, such as the federal account system of the Bureau of Labor Statistics.

Further information on NIPAs may be obtained from
U.S. Department of Commerce

Bureau of Economic Analysis
www.bea.gov

## Bureau of Labor Statistics

## Consumer Price Indexes

The Consumer Price Index (CPI) represents changes in prices of all goods and services purchased for consumption by
urban households. Indexes are available for two population groups: a CPI for All Urban Consumers (CPI-U) and a CPI for Urban Wage Earners and Clerical Workers (CPI-W). Unless otherwise specified, data in this report are adjusted for inflation using the CPI-U. These values are generally adjusted to a school-year basis by averaging the July through June figures. Price indexes are available for the United States, the four Census regions, size of city, cross-classifications of regions and size-classes, and 26 local areas. The major uses of the CPI include as an economic indicator, as a deflator of other economic series, and as a means of adjusting income.

Also available is the Consumer Price Index research series using current methods (CPI-U-RS), which presents an estimate of the CPI-U from 1978 to the present that incorporates most of the improvements that the Bureau of Labor Statistics has made over that time span into the entire series. The historical price index series of the CPI-U does not reflect these changes, though these changes do make the present and future CPI more accurate. The limitations of the CPI-U-RS include considerable uncertainty surrounding the magnitude of the adjustments and the several improvements in the CPI that have not been incorporated into the CPI-URS for various reasons. Nonetheless, the CPI-U-RS can serve as a valuable proxy for researchers needing a historical estimate of inflation using current methods. This series has not been used in NCES tables.

Further information on consumer price indexes may be obtained from

## Bureau of Labor Statistics

U.S. Department of Labor

2 Massachusetts Avenue NE
Washington, DC 20212
http://www.bls.gov/cpi

## Employment and Unemployment Surveys

Statistics on the employment and unemployment status of the population and related data are compiled by the Bureau of Labor Statistics (BLS) using data from the Current Population Survey (CPS) (see below) and other surveys. The CPS, a monthly household survey conducted by the U.S. Census Bureau for the Bureau of Labor Statistics, provides a comprehensive body of information on the employment and unemployment experience of the nation's population, classified by age, sex, race, and various other characteristics.

Further information on unemployment surveys may be obtained from

## Census Bureau

## American Community Survey

The Census Bureau introduced the American Community Survey (ACS) in 1996. Fully implemented in 2005, it provides a large monthly sample of demographic, socioeconomic, and housing data comparable in content to the Long Forms of the Decennial Census up to and including the 2000 long form. Aggregated over time, these data serve as a replacement for the Long Form of the Decennial Census. The survey includes questions mandated by federal law, federal regulations, and court decisions.

Since 2011, the survey has been mailed to approximately 295,000 addresses in the United States and Puerto Rico each month, or about 3.5 million addresses annually. A larger proportion of addresses in small governmental units (e.g., American Indian reservations, small counties, and towns) also receive the survey. The monthly sample size is designed to approximate the ratio used in the 2000 Census, which requires more intensive distribution in these areas. The ACS covers the U.S. resident population, which includes the entire civilian, noninstitutionalized population; incarcerated persons; institutionalized persons; and the active duty military who are in the United States. In 2006, the ACS began interviewing residents in group quarter facilities. Institutionalized group quarters include adult and juvenile correctional facilities, nursing facilities, and other health care facilities. Noninstitutionalized group quarters include college and university housing, military barracks, and other noninstitutional facilities such as workers and religious group quarters and temporary shelters for the homeless.

National-level data from the ACS are available from 2000 onward. The ACS produces 1-year estimates for jurisdictions with populations of 65,000 and over and 5-year estimates for jurisdictions with smaller populations. The 1-year estimates for 2015 used data collected between January 1, 2015, and December 31, 2015, and the 5-year estimates for 2011-2015 used data collected between January 1, 2011, and December 31, 2015. The ACS produced 3-year estimates (for jurisdictions with populations of 20,000 or over) for the periods 2005-2007, 2006-2008, 2007-2009, 2008-2010, 2009-2011, 2010-2012, and 2011-2013. Three-year estimates for these periods will continue to be available to data users, but no further 3-year estimates will be produced.

Further information about the ACS is available at http:// www.census.gov/acs/www/.

## Annual Survey of State and Local Government Finances

The Census Bureau conducts an Annual Survey of State and Local Government Finances as authorized by law under Title 13, United States Code, Section 182. Periodic surveys of government finances have been conducted since 1902 and annually since 1952 . This survey covers the entire range of
government finance activities: revenue, expenditure, debt, and assets. Revenues and expenditures comprise actual receipts and payments of a government and its agencies, including government-operated enterprises, utilities, and public trust funds. The expenditure-reporting categories comprise all amounts of money paid out by a government and its agencies, with the exception of amounts for debt retirement and for loan, investment, agency, and private trust transactions.

State government finances are based primarily on the Census Bureau Annual Survey of State and Local Government Finances. Census analysts compile figures from official records and reports of the state governments for most of the state financial data. States differ in the ways they administer activities; they may fund such activities directly, or they may disburse the money to a lower level government or government agency. Therefore, caution is advised when attempting to make a direct comparison between states on their state fiscal aid data.

The sample of local governments is drawn from the periodic (years ending in " 2 " and " 7 ") Census of Governments and consists of certain local governments sampled with certainty plus a sample below the certainty level. Finance data for all school districts are collected on an annual basis and released through the NCES Common Core of Data system. A new sample is usually selected every 5 years (years ending in " 4 " and " 9 ").

The statistics in Government Finances that are based wholly or partly on data from the sample are subject to sampling error. State government finance data are not subject to sampling error. Estimates of major U.S. totals for local governments are subject to a computed sampling variability of less than one-half of 1 percent. The estimates are also subject to the inaccuracies in classification, response, and processing that would occur if a complete census had been conducted under the same conditions as the sample.

Further information on government finances may be obtained from

## Census of Population-Education in the United States

Some NCES tables are based on a part of the decennial census that consisted of questions asked of a 1 in 6 sample of people and housing units in the United States. This sample
was asked more detailed questions about income, occupation, and housing costs, as well as questions about general demographic information. This decennial census "long form" has been discontinued and has been replaced by the American Community Survey (ACS).

School enrollment. People classified as enrolled in school reported attending a "regular" public or private school or college. They were asked whether the institution they attended was public or private and what level of school they were enrolled in.

Educational attainment. Data for educational attainment were tabulated for people ages 15 and over and classified according to the highest grade completed or the highest degree received. Instructions were also given to include the level of the previous grade attended or the highest degree received for people currently enrolled in school.

Poverty status. To determine poverty status, answers to income questions were used to make comparisons to the appropriate poverty threshold. All people except those who were institutionalized, people in military group quarters and college dormitories, and unrelated people under age 15 were considered. If the total income of each family or unrelated individual in the sample was below the corresponding cutoff, that family or individual was classified as "below the poverty level."

## Current Population Survey

The Current Population Survey (CPS) is a monthly survey of about 60,000 households conducted by the U.S. Census Bureau for the Bureau of Labor Statistics. The CPS is the primary source of labor force statistics on the U.S. noninstitutionalized population (e.g., it excludes military personnel and their families living on bases and inmates of correctional institutions). In addition, supplemental questionnaires are used to provide further information about the U.S. population. The March supplement (also known as the Annual Social and Economic [ASEC] supplement) contains detailed questions on topics such as income, employment, and educational attainment; additional questions, such as items on disabilities, have also been included. In the July supplement, items on computer and internet use are the principal focus. The October supplement also contains some questions about computer and internet use, but most of its questions relate to school enrollment and school characteristics.

The current sample design, introduced in July 2001, includes about 72,000 households. Each month about 58,900 of the 72,000 households are eligible for interview, and of
those, 7 to 10 percent are not interviewed because of temporary absence or unavailability. Information is obtained each month from those in the household who are 15 years of age and over, and demographic data are collected for children $0-14$ years of age. In addition, supplemental questions regarding school enrollment are asked about eligible household members age 3 and over in the October survey. Prior to July 2001, data were collected in the CPS from about 50,000 dwelling units. The samples are initially selected based on the decennial census files and are periodically updated to reflect new housing construction.

A major redesign of the CPS was implemented in January 1994 to improve the quality of the data collected. Survey questions were revised, new questions were added, and computerassisted interviewing methods were used for the survey data collection. Further information about the redesign is available in Current Population Survey, October 1995: (School Enrollment Supplement) Technical Documentation at http:// www.census.gov/prod/techdoc/cps/cpsoct95.pdf.

Caution should be used when comparing data from 1994 through 2001 with data from 1993 and earlier. Data from 1994 through 2001 reflect 1990 census-based population controls, while data from 1993 and earlier reflect 1980 or earlier census-based population controls. Changes in population controls generally have relatively little impact on summary measures such as means, medians, and percentage distributions; they can, however, have a significant impact on population counts. For example, use of the 1990 censusbased population controls resulted in about a 1 percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1994 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Beginning in 2003, the race/ethnicity questions were expanded. Information on people of two or more races were included, and the Asian and Pacific Islander race category was split into two categories-Asian and Native Hawaiian or Other Pacific Islander. In addition, questions were reworded to make it clear that self-reported data on race/ethnicity should reflect the race/ethnicity with which the responder identifies, rather than what may be written in official documentation.

The estimation procedure employed for monthly CPS data involves inflating weighted sample results to independent estimates of characteristics of the civilian noninstitutional population in the United States by age, sex, and race. These independent estimates are based on statistics from decennial censuses; statistics on births, deaths, immigration, and emigration; and statistics on the population in the armed services. Generalized standard error tables are provided in the Current Population Reports; methods for deriving standard errors can be found within the CPS technical documentation at http://www.census.gov/programs-surveys/ cps/technical-documentation/complete.html. The CPS data are subject to both nonsampling and sampling errors.

Prior to 2009, standard errors were estimated using the generalized variance function. The generalized variance function is a simple model that expresses the variance as a function of the expected value of a survey estimate. Beginning with March 2009 CPS data, standard errors were estimated using replicate weight methodology. Those interested in using CPS householdlevel supplement replicate weights to calculate variances may refer to Estimating Current Population Survey (CPS) House-hold-Level Supplement Variances Using Replicate Weights at http://thedataweb.rm.census.gov/pub/cps/supps/HH-level Use of the Public Use Replicate Weight File.doc.

Washington, DC 20233
http://www.census.gov/cps

## Computer and Internet Use

The Current Population Survey (CPS) has been conducting supplemental data collections regarding computer use since 1984. In 1997, these supplemental data collections were expanded to include data on internet access. More recently, data regarding computer and internet use were collected in October 2010, July 2011, October 2012, July 2013, and July 2015.

In the July 2011, 2013, and 2015 supplements, the sole focus was on computer and internet use. In the October 2010 and 2012 supplements questions on school enrollment were the principal focus, and questions on computer and internet use were less prominent. Measurable differences in estimates taken from these supplements across years could reflect actual changes in the population; however, differences could also reflect seasonal variations in data collection or differences between the content of the July and October supplements. Therefore, caution should be used when making year-to-year comparisons of CPS computer and internet use estimates.

The most recent computer and internet use supplement, conducted in July 2015, collected household information from all eligible CPS households, as well as information from individual household members age 3 and over. Information was collected about the household's computer and internet use and the household member's use of the Internet from any location in the past year. Additionally, information was gathered regarding a randomly selected household respondent's use of the Internet.

For the July 2015 basic CPS, the household-level nonresponse rate was 13.0 percent. The person-level nonresponse rate for the computer and internet use supplement was an additional 23.0 percent. Since one rate is a person-level rate and the other a household-level rate, the rates cannot be combined to derive an overall rate.

4600 Silver Hill Road
Washington, DC 20233
http://census.gov/topics/population/computer-internet.html

## Dropouts

Each October, the Current Population Survey (CPS) includes supplemental questions on the enrollment status of the population age 3 years and over as part of the monthly basic survey on labor force participation. In addition to gathering the information on school enrollment, with the limitations on accuracy as noted below under "School Enrollment," the survey data permit calculations of dropout rates. Both status and event dropout rates are tabulated from the October CPS. Event rates describe the proportion of students who leave school each year without completing a high school program. Status rates provide cumulative data on dropouts among all young adults within a specified age range. Status rates are higher than event rates because they include all dropouts ages 16 through 24 , regardless of when they last attended school.

In addition to other survey limitations, dropout rates may be affected by survey coverage and exclusion of the institutionalized population. The incarcerated population has grown rapidly and has a high dropout rate. Dropout rates for the total population might be higher than those for the noninstitutionalized population if the prison and jail populations were included in the dropout rate calculations. On the other hand, if military personnel, who tend to be high school graduates, were included, it might offset some or all of the impact from the theoretical inclusion of the jail and prison populations.

Another area of concern with tabulations involving young people in household surveys is the relatively low coverage ratio compared to older age groups. CPS undercoverage results from missed housing units and missed people within sample households. Overall CPS undercoverage for October 2015 is estimated to be about 11 percent. CPS coverage varies with age, sex, and race. Generally, coverage is larger for females than for males and larger for non-Blacks than for Blacks. This differential coverage is a general problem for most household-based surveys. Further information on CPS methodology may be found in the technical documentation at http://www.census.gov/cps.

Further information on the calculation of dropouts and dropout rates may be obtained from the Trends in High School Dropout and Completion Rates in the United States report at https://nces.ed.gov/programs/dropout/index.asp or by contacting

## Educational Attainment

Reports documenting educational attainment are produced by the Census Bureau using March Current Population Survey (CPS) supplement (Annual Social and Economic supplement [ASEC]) results. The sample size for the 2014 ASEC supplement (including basic CPS) was about 98,000 addresses; the tables may be downloaded at https://www.census.gov/topics/ education/educational-attainment/data/tables.2014.html. The sample size for the 2015 ASEC supplement (including basic CPS) was about 100,000 addresses. The results were released in Educational Attainment in the United States: 2015; the tables may be downloaded at https://www.census.gov/topics/ education/educational-attainment/data/tables.2015.html. The sample size for the 2016 ASEC supplement (including basic CPS) was about 94,000 households. The results were released in Educational Attainment in the United States: 2016; the tables may be downloaded at https://www.census.gov/topics/ education/educational-attainment/data/tables.2016.html.

In addition to the general constraints of CPS, some data indicate that the respondents have a tendency to overestimate the educational level of members of their household. Some inaccuracy is due to a lack of the respondent's knowledge of the exact educational attainment of each household member and the hesitancy to acknowledge anything less than a high school education. Another cause of nonsampling variability is the change in the numbers in the armed services over the years.

Further information on educational attainment data from CPS may be obtained from

Education and Social Stratification Branch
Census Bureau
U.S. Department of Commerce

4600 Silver Hill Road
Washington, DC 20233
https://www.census.gov/topics/education/educational-attainment/ data.html

## School Enrollment

Each October, the Current Population Survey (CPS) includes supplemental questions on the enrollment status of the population age 3 years and over. Prior to 2001, the October supplement consisted of approximately 47,000 interviewed households. Beginning with the October 2001 supplement, the sample was expanded by 9,000 to a total of approximately 56,000 interviewed households. The main sources of nonsampling variability in the responses to the supplement are those inherent in the survey instrument. The question of current enrollment may not be answered accurately for various reasons. Some respondents may not know current grade information for every student in the household, a problem especially prevalent for households with members in college or in nursery school. Confusion over college credits or hours taken by a student may make it difficult to determine the year in which the student is enrolled. Problems may occur with the definition of nursery school (a group or class
organized to provide educational experiences for children) where respondents' interpretations of "educational experiences" vary.

For the October 2015 basic CPS, the household-level nonresponse rate was 12.9 percent. The person-level nonresponse rate for the school enrollment supplement was an additional 8.9 percent. Since the basic CPS nonresponse rate is a household-level rate and the school enrollment supplement nonresponse rate is a person-level rate, these rates cannot be combined to derive an overall nonresponse rate. Nonresponding households may have fewer persons than interviewed ones, so combining these rates may lead to an overestimate of the true overall nonresponse rate for persons for the school enrollment supplement.

Although the principal focus of the October supplement is school enrollment, in some years the supplement has included additional questions on other topics. In 2010 and 2012, for example, the October supplement included additional questions on computer and internet use.

Further information on CPS methodology may be obtained from http://www.census.gov/cps.

Further information on the CPS School Enrollment Supplement may be obtained from

Education and Social Stratification Branch Census Bureau

Washington, DC 20233
https://www.census.gov/topics/education/school-enrollment.html

## Decennial Census, Population Estimates, and Population Projections

The decennial census is a universe survey mandated by the U.S. Constitution. It is a questionnaire sent to every household in the country, and it is composed of seven questions about the household and its members (name, sex, age, relationship, Hispanic origin, race, and whether the housing unit is owned or rented). The Census Bureau also produces annual estimates of the resident population by demographic characteristics (age, sex, race, and Hispanic origin) for the nation, states, and counties, as well as national and state projections for the resident population. The reference date for population estimates is July 1 of the given year. With each new issue of July 1 estimates, the Census Bureau revises estimates for each year back to the last census. Previously published estimates are superseded and archived.

Census respondents self-report race and ethnicity. The race questions on the 1990 and 2000 censuses differed in some significant ways. In 1990, the respondent was instructed to select the one race "that the respondent considers himself/herself to be," whereas in 2000, the respondent could select one or more races that the person considered himself or herself to be. American Indian, Eskimo, and Aleut were three separate race categories in 1990; in 2000, the American Indian and Alaska

Native categories were combined, with an option to write in a tribal affiliation. This write-in option was provided only for the American Indian category in 1990. There was a combined Asian and Pacific Islander race category in 1990, but the groups were separated into two categories in 2000.

The census question on ethnicity asks whether the respondent is of Hispanic origin, regardless of the race option(s) selected; thus, persons of Hispanic origin may be of any race. In the 2000 census, respondents were first asked, "Is this person Spanish/Hispanic/Latino?" and then given the following options: No, not Spanish/Hispanic/Latino; Yes, Puerto Rican; Yes, Mexican, Mexican American, Chicano; Yes, Cuban; and Yes, other Spanish/Hispanic/Latino (with space to print the specific group). In the 2010 census, respondents were asked "Is this person of Hispanic, Latino, or Spanish origin?" The options given were No, not of Hispanic, Latino, or Spanish origin; Yes, Mexican, Mexican Am., Chicano; Yes, Puerto Rican; Yes, Cuban; and Yes, another Hispanic, Latino, or Spanish origin-along with instructions to print "Argentinean, Colombian, Dominican, Nicaraguan, Salvadoran, Spaniard, and so on" in a specific box.

The 2000 and 2010 censuses each asked the respondent "What is this person's race?" and allowed the respondent to select one or more options. The options provided were largely the same in both the 2000 and 2010 censuses: White; Black, African American, or Negro; American Indian or Alaska Native (with space to print the name of enrolled or principal tribe); Asian Indian; Japanese; Native Hawaiian; Chinese; Korean; Guamanian or Chamorro; Filipino; Vietnamese; Samoan; Other Asian; Other Pacific Islander; and Some other race. The last three options included space to print the specific race. Two significant differences between the 2000 and 2010 census questions on race were that no race examples were provided for the "Other Asian" and "Other Pacific Islander" responses in 2000, whereas the race examples of "Hmong, Laotian, Thai, Pakistani, Cambodian, and so on" and "Fijian, Tongan, and so on," were provided for the "Other Asian" and "Other Pacific Islander" responses, respectively, in 2010.

The census population estimates program modified the enumerated population from the 2010 census to produce the population estimates base for 2010 and onward. As part of the modification, the Census Bureau recoded the "Some other race" responses from the 2010 census to one or more of the five OMB race categories used in the estimates program (for more information, see http://www.census.gov/programs-surveys/popest/technical-documentation/methodology.html).

Further information on the decennial census may be obtained from

## http://www.census.gov

## Small Area Income and Poverty Estimates

Small Area Income and Poverty Estimates (SAIPE) are produced for school districts, counties, and states. The main objective of this program is to provide updated estimates of
income and poverty statistics for the administration of federal programs and the allocation of federal funds to local jurisdictions. Estimates for 2015 were released in December 2016. These estimates combine data from administrative records, postcensal population estimates, and the decennial census with direct estimates from the American Community Survey to provide consistent and reliable single-year estimates. These model-based single-year estimates are more reflective of current conditions than multiyear survey estimates.

Further information on the SAIPE program may be obtained from

## Small Area Estimates Branch <br> Census Bureau <br> U.S. Department of Commerce <br> sehsd.saipe@census.gov <br> http://www.census.gov/did/www/saipe/data/index.html

## Centers for Disease Control and Prevention

## National Health Interview Survey

The National Health Interview Survey (NHIS) is the principal source of information on the health of the civilian noninstitutionalized population of the United States and is one of the major data collection programs of the National Center for Health Statistics (NCHS), which is part of the Centers for Disease Control and Prevention (CDC). The main objective of the NHIS is to monitor the health of the U.S. population through the collection and analysis of data on a broad range of health topics. A major strength of this survey lies in its ability to display these health topics by many demographic and socioeconomic characteristics.

The NHIS covers the civilian noninstitutionalized population residing in the United States at the time of the interview. The NHIS is a cross-sectional household interview survey. Sampling and interviewing are continuous throughout each year. The sampling plan follows a multistage area probability design that permits the representative sampling of households and noninstitutional group quarters (e.g., college dormitories). The sampling plan is redesigned after every decennial census. The current sampling plan, implemented in 2016, is similar in many ways to the previous sampling plan, which was in place from 2006 to 2015. The current sampling plan consists of a sample of clusters of addresses that are located in primary sampling units (PSUs). A PSU is a county, a small group of contiguous counties, or a metropolitan statistical area.

The total NHIS sample is subdivided into four separate panels, each of which is a representative sample of the U.S. population. With four sample panels and no sample cuts or augmentations, the expected NHIS sample size (completed interviews) is approximately 35,000 households, containing about 87,500 persons. The annual response rate of the NHIS is approximately 80 percent of the eligible households in the sample.

The revised NHIS questionnaire, in use since 1997, contains Core questions and Supplements. The Core questions remain largely unchanged from year to year and allow for trends analysis and for data from more than one year to be pooled to increase sample size for analytic purposes. The Core contains four major components: Household, Family, Sample Adult, and Sample Child.

The Household component collects limited demographic information on all of the individuals living in a particular house. The Family component verifies and collects additional demographic information on each member from each family in the house and collects data on topics such as health status and limitations, injuries, healthcare access and utilization, health insurance, and income and assets. The Family component allows the NHIS to serve as a sampling frame for additional integrated surveys as needed.

Data are collected through a personal household interview conducted by interviewers employed and trained by the U.S. Bureau of the Census according to procedures specified by the NCHS.

Further information on the NHIS may be obtained from
Division of Health Interview Statistics
National Center for Health Statistics
Centers for Disease Control and Prevention
3311 Toledo Road, Room 2217
Hyattsville, MD 20782-2064
(301) 458-4901
nhis@cdc.gov
http://www.cdc.gov/nchs/nhis.htm

## Morbidity and Mortality Weekly Report: Summary of Notifiable Diseases

The Summary of Notifiable Diseases, a publication of the Morbidity and Mortality Weekly Report (MMWR), contains the official statistics, in tabular and graphical form, for the reported occurrence of nationally notifiable infectious diseases in the United States. These statistics are collected and compiled from reports sent by U.S. state and territory, New York City, and District of Columbia health departments to the National Notifiable Diseases Surveillance System (NNDSS), which is operated by the Centers for Disease Control and Prevention (CDC) in collaboration with the Council of State and Territorial Epidemiologists.

For more information on the MMWR: Summary of Notifiable Diseases, see http://www.cdc.gov/mmwr/mmwr nd/.

## National Vital Statistics System

The National Vital Statistics System (NVSS) is the method by which data on vital events-births, deaths, marriages, divorces, and fetal deaths-are provided to the National Center for Health Statistics (NCHS), part of the Centers for Disease Control and Prevention (CDC). The data are provided to NCHS through the Vital Statistics Cooperative Program (VSCP). In 1984 and earlier years, the VSCP included varying numbers of states that provided data based
on a 100 percent sample of their birth certificates. Data for states not in the VSCP were based on a 50 percent sample of birth certificates filed in those states. Population data used to compile birth rates are based on special estimation procedures and are not actual counts.

Race and Hispanic ethnicity are reported separately in the NVSS. Data are available for non-Hispanic Whites and nonHispanic Blacks for 1990 and later; however, for 1980 and 1985, data for Whites and Blacks may include persons of Hispanic ethnicity. For all years, Asian/Pacific Islander and American Indian/Alaska Native categories include persons of Hispanic ethnicity.

For more information on the NCHS and the NVSS, see http://www.cdc.gov/nchs/nvss.htm.

## School-Associated Violent Death Surveillance System

The School-Associated Violent Death Surveillance System (SAVD-SS) is an epidemiological study developed by the Centers for Disease Control and Prevention in conjunction with the U.S. Department of Education and the U.S. Department of Justice. SAVD-SS seeks to describe the epidemiology of school-associated violent deaths, identify common features of these deaths, estimate the rate of schoolassociated violent death in the United States, and identify potential risk factors for these deaths. The study includes descriptive data on all school-associated violent deaths in the United States, including all homicides, suicides, or legal intervention in which the fatal injury occurred on the campus of a functioning elementary or secondary school; while the victim was on the way to or from regular sessions at such a school; or while attending or on the way to or from an official school-sponsored event. Victims of such incidents include nonstudents, as well as students and staff members. SAVD-SS includes descriptive information about the school, event, victim(s), and offender(s). The study has collected data since July 1, 1992.

SAVD-SS uses a four-step process to identify and collect data on school-associated violent deaths. Cases are initially identified through a search of the LexisNexis newspaper and media database. Then law enforcement officials are contacted to confirm the details of the case and to determine if the event meets the case definition. Once a case is confirmed, a law enforcement official and a school official are interviewed regarding details about the school, event, victim(s), and offender(s). A copy of the full law enforcement report is also sought for each case. The information obtained on schools includes school demographics, attendance/absentee rates, suspensions/expulsions and mobility, school history of weaponcarrying incidents, security measures, violence prevention activities, school response to the event, and school policies about weapon carrying. Event information includes the location of injury, the context of injury (while classes were being held, during break, etc.), motives for injury, method of injury, and school and community events happening around the time period. Information obtained on victim(s) and offender(s) includes demographics, circumstances of the event (date/time,
alcohol or drug use, number of persons involved), types and origins of weapons, criminal history, psychological risk factors, school-related problems, extracurricular activities, and family history, including structure and stressors.

Some 105 school-associated violent deaths were identified from July 1, 1992, to June 30, 1994 (Kachur et al., 1996, School-Associated Violent Deaths in the United States, 1992 to 1994, Journal of the American Medical Association, 275: 1729-1733). A more recent report from this data collection identified 253 school-associated violent deaths between July 1, 1994, and June 30, 1999 (Anderson et al., 2001, School-Associated Violent Deaths in the United States, 1994-1999, Journal of the American Medical Association, 286: 2695-2702). Other publications from this study have described how the number of events change during the school year (Centers for Disease Control and Prevention, 2001, Temporal Variations in SchoolAssociated Student Homicide and Suicide Events—United States, 1992-1999, Morbidity and Mortality Weekly Report, 50: 657-660), the source of the firearms used in these events (Reza et al., 2003, Source of Firearms Used by Students in School-Associated Violent Deaths—United States, 1992-1999, Morbidity and Mortality Weekly Report, 52: 169-172), and suicides that were associated with schools (Kauffman et al., 2004, School-Associated Suicides—United States, 1994-1999, Morbidity and Mortality Weekly Report, 53: 476-478). The most recent publication describes trends in school-associated homicide from July 1, 1992, to June 30, 2006 (Centers for Disease Control and Prevention, 2008, School-Associated Student Homicides—United States, 1992-2006, Morbidity and Mortality Weekly Report 2008, 57: 33-36). The interviews conducted on cases between July 1, 1994, and June 30, 1999, achieved a response rate of 97 percent for police officials and 78 percent for school officials.

For several reasons, all data for years from 1999 to the present are flagged as preliminary. For some recent data, the interviews with school and law enforcement officials to verify case details have not been completed. The details learned during the interviews can occasionally change the classification of a case. Also, new cases may be identified because of the expansion of the scope of the media files used for case identification. Sometimes other cases not identified during earlier data years using the independent case finding efforts (which focus on nonmedia sources of information) will be discovered. Also, other cases may occasionally be identified while the law enforcement and school interviews are being conducted to verify known cases.

## Web-Based Injury Statistics Query and Reporting System Fatal

Web-Based Injury Statistics Query and Reporting System (WISQARS) Fatal is an interactive online database that provides mortality data related to injury. The mortality data reported in WISQARS Fatal come from death certificate data reported to the National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention. Data include causes of death reported by attending physicians, medical examiners, and coroners and demographic information about decedents reported by funeral directors, who obtain that information from family members and other informants. NCHS collects, compiles, verifies, and prepares these data for release to the public. The data provide information about unintentional injury, homicide, and suicide as leading causes of death, how common these causes of death are, and whom they affect. These data are intended for a broad audience-the public, the media, public health practitioners and researchers, and public health officials-to increase their knowledge of injury.

WISQARS Fatal mortality reports provide tables of the total numbers of injury-related deaths and the death rates per 100,000 U.S. population. The reports list deaths according to cause (mechanism) and intent (manner) of injury by state, race, Hispanic origin, sex, and age groupings.

Further information on WISQARS Fatal may be obtained from

## Youth Risk Behavior Surveillance System

The Youth Risk Behavior Surveillance System (YRBSS) is an epidemiological surveillance system developed by the Centers for Disease Control and Prevention (CDC) to monitor the prevalence of youth behaviors that most influence health. The YRBSS focuses on priority health-risk behaviors established during youth that result in the most significant mortality, morbidity, disability, and social problems during both youth and adulthood. The YRBSS includes a national schoolbased Youth Risk Behavior Survey (YRBS), as well as surveys conducted in states and large urban school districts.

The national YRBS uses a three-stage cluster sampling design to produce a nationally representative sample of students in grades $9-12$ in the United States. The target population consists of all public and private school students in grades 9-12 in the 50 states and the District of Columbia. The first-stage sampling frame includes selecting primary sampling units (PSUs) from strata formed on the basis of urbanization and the relative percentage of Black and Hispanic students in the PSU. These PSUs are either
counties; subareas of large counties; or groups of smaller, adjacent counties. At the second stage, schools were selected with probability proportional to school enrollment size.

The final stage of sampling consists of randomly selecting, in each chosen school and in each of grades 9-12, one or two classrooms from either a required subject, such as English or social studies, or a required period, such as homeroom or second period. All students in selected classes are eligible to participate. In surveys conducted before 2013, three strategies were used to oversample Black and Hispanic students: (1) larger sampling rates were used to select PSUs that are in high-Black and high-Hispanic strata; (2) a modified measure of size was used that increased the probability of selecting schools with a disproportionately high minority enrollment; and (3) two classes per grade, rather than one, were selected in schools with a high percentage of combined Black, Hispanic, Asian/Pacific Islander, or American Indian/Alaska Native enrollment. In 2013, only selection of two classes per grade was needed to achieve an adequate precision with minimum variance. Approximately 16,300 students participated in the 1993 survey, 10,900 students participated in the 1995 survey, 16,300 students participated in the 1997 survey, 15,300 students participated in 1999, 13,600 students participated in 2001, 15,200 students participated in 2003, 13,900 participated in 2005, 14,000 participated in 2007, 16,400 participated in $2009,15,400$ participated in 2011, 13,600 participated in 2013, and 15,600 participated in 2015.

The overall response rate was 70 percent for the 1993 survey, 60 percent for the 1995 survey, 69 percent for the 1997 survey, 66 percent in 1999, 63 percent in 2001, 67 percent in 2003, 67 percent in 2005, 68 percent in 2007, 71 percent in 2009, 71 percent in 2011, 68 percent in 2013, and 60 percent in 2015. NCES standards call for response rates of 85 percent or greater for cross-sectional surveys, and bias analyses are required by NCES when that percentage is not achieved. For YRBS data, a full nonresponse bias analysis has not been done because the data necessary to do the analysis are not available. The weights were developed to adjust for nonresponse and the oversampling of Black and Hispanic students in the sample. The final weights were constructed so that only weighted proportions of students (not weighted counts of students) in each grade matched national population projections.

State-level data were downloaded from the Youth Online: Comprehensive Results web page (http://nccd.cdc.gov/Youth Online/). Each state and district school-based YRBS employs a two-stage, cluster sample design to produce representative samples of students in grades $9-12$ in their jurisdiction. All except a few state samples, and all district samples, include only public schools, and each district sample includes only schools in the funded school district (e.g., San Diego Unified School District) rather than in the entire city (e.g., greater San Diego area).

In the first sampling stage in all except a few states and districts, schools are selected with probability proportional to school enrollment size. In the second sampling stage,
intact classes of a required subject or intact classes during a required period (e.g., second period) are selected randomly. All students in sampled classes are eligible to participate. Certain states and districts modify these procedures to meet their individual needs. For example, in a given state or district, all schools, rather than a sample of schools, might be selected to participate. State and local surveys that have a scientifically selected sample, appropriate documentation, and an overall response rate greater than or equal to 60 percent are weighted. The overall response rate reflects the school response rate multiplied by the student response rate. These three criteria are used to ensure that the data from those surveys can be considered representative of students in grades $9-12$ in that jurisdiction. A weight is applied to each record to adjust for student nonresponse and the distribution of students by grade, sex, and race/ethnicity in each jurisdiction. Therefore, weighted estimates are representative of all students in grades 9-12 attending schools in each jurisdiction. Surveys that do not have an overall response rate of greater than or equal to 60 percent and that do not have appropriate documentation are not weighted and are not included in this report.

For the 2015 YRBS, data from 37 states and 19 large urban districts were weighted. (For information on the location of the districts, please see https://www.cdc.gov/healthyyouth/data/yrbs/ participation.htm.) In 36 states and all large urban school districts, weighted estimates are representative of all students in grades 9-12 attending public schools in each jurisdiction. In one state (South Dakota), weighted estimates are representative of all students in grades $9-12$ attending public and private schools. Student sample sizes ranged from 1,313 to 55,596 across the states and from 1,052 to 10,419 across the large urban school districts. Among the states, school response rates ranged from 70 percent to 100 percent, student response rates ranged from 64 percent to 90 percent, and overall response rates ranged from 60 percent to 84 percent. Among the large urban school districts, school response rates ranged from 90 percent to 100 percent, student response rates ranged from 66 percent to 88 percent, and overall response rates ranged from 64 percent to 88 percent.

In 2013, a total of 42 states and 21 districts had weighted data. Not all of the districts were contained in the 42 states. For example, California was not one of the 42 states that obtained weighted data, but it contained several districts that did. In sites with weighted data, the student sample sizes for the state and district YRBS ranged from 1,107 to 53,785 . School response rates ranged from 70 to 100 percent, student response rates ranged from 60 to 94 percent, and overall response rates ranged from 60 to 87 percent.

Readers should note that reports of these data published by the CDC and in this report do not include percentages for which the denominator includes fewer than 100 unweighted cases.

In 1999 , in accordance with changes to the Office of Management and Budget's standards for the classification of federal data on race and ethnicity, the YRBS item on race/ ethnicity was modified. The version of the race and ethnicity question used in 1993, 1995, and 1997 was

How do you describe yourself?
a. White-not Hispanic
b. Black-not Hispanic
c. Hispanic or Latino
d. Asian or Pacific Islander
e. American Indian or Alaskan Native
f. Other

The version used in 1999, 2001, 2003, and in the 2005, 2007, and 2009 state and local district surveys was

How do you describe yourself? (Select one or more responses.)
a. American Indian or Alaska Native
b. Asian
c. Black or African American
d. Hispanic or Latino
e. Native Hawaiian or Other Pacific Islander
f. White

In the 2005 national survey and in all 2007, 2009, 2011, 2013, and 2015 surveys, race/ethnicity was computed from two questions: (1) "Are you Hispanic or Latino?" (response options were "Yes" and "No"), and (2) "What is your race?" (response options were "American Indian or Alaska Native," "Asian," "Black or African American," "Native Hawaiian or Other Pacific Islander," or "White"). For the second question, students could select more than one response option. For this report, students were classified as "Hispanic" if they answered "Yes" to the first question, regardless of how they answered the second question. Students who answered "No" to the first question and selected more than one race/ethnicity in the second category were classified as "More than one race." Students who answered "No" to the first question and selected only one race/ethnicity were classified as that race/ethnicity. Race/ethnicity was classified as missing for students who did not answer the first question and for students who answered "No" to the first question but did not answer the second question.

CDC has conducted two studies to understand the effect of changing the race/ethnicity item on the YRBS. Brener, Kann, and McManus (Public Opinion Quarterly, 67:227-226, 2003) found that allowing students to select more than one response to a single race/ethnicity question on the YRBS had only a minimal effect on reported race/ethnicity among high school students. Eaton, Brener, Kann, and Pittman (Journal of Adolescent Health, 41: 488-494, 2007) found that self-reported race/ethnicity was similar regardless of whether the singlequestion or a two-question format was used.

## Department of Justice

## Bureau of Justice Statistics

A division of the U.S. Department of Justice Office of Justice Programs, the Bureau of Justice Statistics (BJS) collects, analyzes, publishes, and disseminates statistical information on crime, criminal offenders, victims of crime, and the operations of the justice system at all levels of government and internationally. It also provides technical and financial support to state governments for development of criminal justice statistics and information systems on crime and justice.

For information on the BJS, see www.ojp.usdoj.gov/bjs/.

## National Crime Victimization Survey

The National Crime Victimization Survey (NCVS), administered for the U.S. Bureau of Justice Statistics (BJS) by the U.S. Census Bureau, is the nation's primary source of information on crime and the victims of crime. Initiated in 1972 and redesigned in 1992, the NCVS collects detailed information on the frequency and nature of the crimes of rape, sexual assault, robbery, aggravated and simple assault, theft, household burglary, and motor vehicle theft experienced by Americans and American households each year. The survey measures both crimes reported to the police and crimes not reported to the police.

NCVS estimates presented may differ from those in previous published reports. This is because a small number of victimizations, referred to as series victimizations, are included using a new counting strategy. High-frequency repeat victimizations, or series victimizations, are six or more similar but separate victimizations that occur with such frequency that the victim is unable to recall each individual event or describe each event in detail. As part of ongoing research efforts associated with the redesign of the NCVS, BJS investigated ways to include high-frequency repeat victimizations, or series victimizations, in estimates of criminal victimization. Including series victimizations results in more accurate estimates of victimization. BJS has decided to include series victimizations using the victim's estimates of the number of times the victimizations occurred over the past 6 months, capping the number of victimizations within each series at a maximum of 10 . This strategy for counting series victimizations balances the desire to estimate national rates and account for the experiences of persons who have been subjected to repeat victimizations against the desire to minimize the estimation errors that can occur when repeat victimizations are reported. Including series victimizations in national rates results in rather large increases in the level of violent victimization; however, trends in violence are generally similar regardless of whether series victimizations are included. For more information on the new counting strategy and supporting research, see Methods for Counting High-Frequency Repeat Victimizations in the National Crime Victimization Survey at http://bjs.ojp.usdoj.gov/content/ pub/pdf/mchfrv.pdf.

Readers should note that in 2003, in accordance with changes to the Office of Management and Budget's standards for the classification of federal data on race and ethnicity, the NCVS item on race/ethnicity was modified. A question on Hispanic origin is now followed by a new question on race. The new question about race allows the respondent to choose more than one race and delineates

Asian as a separate category from Native Hawaiian or Other Pacific Islander. An analysis conducted by the Demographic Surveys Division at the U.S. Census Bureau showed that the new race question had very little impact on the aggregate racial distribution of the NCVS respondents, with one exception: There was a 1.6 percentage point decrease in the percentage of respondents who reported themselves as White. Due to changes in race/ethnicity categories, comparisons of race/ethnicity across years should be made with caution.

There were changes in the sample design and survey methodology in the 2006 NCVS that may have affected survey estimates. Caution should be used when comparing the 2006 estimates to estimates of other years. Data from 2007 onward are comparable to earlier years. Analyses of the 2007 estimates indicate that the program changes made in 2006 had relatively small effects on NCVS estimates. For more information on the 2006 NCVS data, see Criminal Victimization, 2006, at http:// bjs.ojp.usdoj.gov/content/pub/pdf/cv06.pdf, the technical notes at http://bjs.ojp.usdoj.gov/content/pub/pdf/cv06tn.pdf, and Criminal Victimization, 2007, at http://bjs.ojp.usdoj.gov/ content/pub/pdf/cv07.pdf.

The number of NCVS-eligible households in the sample in 2015 was 95,760. Households were selected using a stratified, multistage cluster design. In the first stage, the primary sampling units (PSUs), consisting of counties or groups of counties, were selected. In the second stage, smaller areas, called Enumeration Districts (EDs), were selected from each sampled PSU. Finally, from selected EDs, clusters of four households, called segments, were selected for interview. At each stage, the selection was done proportionate to population size in order to create a selfweighting sample. The final sample was augmented to account for households constructed after the decennial census. Within each sampled household, the U.S. Census Bureau interviewer attempts to interview all household members age 12 and over to determine whether they had been victimized by the measured crimes during the 6 months preceding the interview.

The first NCVS interview with a housing unit is conducted in person. Subsequent interviews are conducted by telephone, if possible. About 80,000 persons age 12 and over are interviewed each 6 months. Households remain in the sample for 3 years and are interviewed seven times at 6-month intervals. Since the survey's inception, the initial interview at each sample unit has been used only to bound future interviews to establish a time frame to avoid duplication of crimes uncovered in these subsequent interviews. Beginning in 2006, data from the initial interview have been adjusted to account for the effects of bounding and have been included in the survey estimates. After a household has been interviewed its seventh time, it is replaced by a new sample household. In 2015, the household response rate was about 82 percent and the completion rate for persons within households was about 86 percent. Weights were developed to permit estimates for the total U.S. population 12 years and older.

Further information on the NCVS may be obtained from

Bureau of Justice Statistics
rachel.morgan@usdoj.gov
http://www.bjs.gov/

## School Crime Supplement

Created as a supplement to the NCVS and co-designed by the National Center for Education Statistics and Bureau of Justice Statistics, the School Crime Supplement (SCS) survey has been conducted in 1989, 1995, and biennially since 1999 to collect additional information about school-related victimizations on a national level. This report includes data from the $1995,1999,2001,2003,2005,2007,2009,2011$, 2013, and 2015 collections. The 1989 data are not included in this report as a result of methodological changes to the NCVS and SCS. The SCS was designed to assist policymakers, as well as academic researchers and practitioners at federal, state, and local levels, to make informed decisions concerning crime in schools. The survey asks students a number of key questions about their experiences with and perceptions of crime and violence that occurred inside their school, on school grounds, on the school bus, or on the way to or from school. Students are asked additional questions about security measures used by their school, students' participation in after-school activities, students' perceptions of school rules, the presence of weapons and gangs in school, the presence of hate-related words and graffiti in school, student reports of bullying and reports of rejection at school, and the availability of drugs and alcohol in school. Students are also asked attitudinal questions relating to fear of victimization and avoidance behavior at school.

The SCS survey was conducted for a 6-month period from January through June in all households selected for the NCVS (see discussion above for information about the NCVS sampling design and changes to the race/ethnicity variable beginning in 2003). Within these households, the eligible respondents for the SCS were those household members who had attended school at any time during the 6 months preceding the interview, were enrolled in grades $6-12$, and were not home schooled. In 2007, the questionnaire was changed and household members who attended school sometime during the school year of the interview were included. The age range of students covered in this report is $12-18$ years of age. Eligible respondents were asked the supplemental questions in the SCS only after completing their entire NCVS interview. It should be noted that the first or unbounded NCVS interview has always been included in analysis of the SCS data and may result in the reporting of events outside of the requested reference period.

The prevalence of victimization for 1995, 1999, 2001, 2003, 2005, 2007, 2009, 2011, 2013, and 2015 was calculated by using NCVS incident variables appended to the SCS data files of the same year. The NCVS type of crime variable was used to classify victimizations of students in
the SCS as serious violent, violent, or theft. The NCVS variables asking where the incident happened (at school) and what the victim was doing when it happened (attending school or on the way to or from school) were used to ascertain whether the incident happened at school. Only incidents that occurred inside the United States are included.

In 2001, the SCS survey instrument was modified from previous collections. In 1995 and 1999, "at school" was defined for respondents as in the school building, on the school grounds, or on a school bus. In 2001, the definition was changed to mean in the school building, on school property, on a school bus, or going to and from school. The change was made to the 2001 questionnaire in order to be consistent with the definition of "at school" as it is constructed in the NCVS; it was also used as the definition for "at school" in subsequent SCS collections. Cognitive interviews conducted by the U.S. Census Bureau on the 1999 SCS suggested that modifications to the definition of "at school" would not have a substantial impact on the estimates.

In terms of the numbers of students participating in the SCS in recent years, 6,300 participated in 2005, 6,500 participated in 2007, 5,000 participated in 2009, 6,500 in 2011, 5,700 in 2013, and 4,700 in 2015.

In the 2005, 2007, 2009, 2011, 2013, and 2015 SCS, the household completion rates were 91 percent, 90 percent, 92 percent, 91 percent, 86 percent, and 83 percent, respectively, and the student completion rates were 62 percent, 58 percent, 56 percent, 63 percent, 60 percent, and 58 percent, respectively. The overall SCS unit response rates (calculated by multiplying the household completion rate by the student completion rate) were about 56 percent in 2005, 53 percent in 2007 , 51 percent in 2009 , 57 percent in 2011, 51 percent in 2013, and 48 percent in 2015. (Starting in 2011, overall SCS unit response rates are weighted.)

There are two types of nonresponse: unit and item nonresponse. NCES requires that any stage of data collection within a survey that has a unit base-weighted response rate of less than 85 percent be evaluated for the potential magnitude of unit nonresponse bias before the data or any analysis using the data may be released (NCES Statistical Standards, 2002, at https://nces.ed.gov/statprog/2002/std4_4.asp). Due to the low unit response rate in 2005, 2007, 2009, 2011, 2013, and 2015, a unit nonresponse bias analysis was done. Unit response rates indicate how many sampled units have completed interviews. Because interviews with students could only be completed after households had responded to the NCVS, the unit completion rate for the SCS reflects both the household interview completion rate and the student interview completion rate. Nonresponse can greatly affect the strength and application of survey data by leading to an increase in variance as a result of a reduction in the actual size of the sample and can produce bias if the nonrespondents have characteristics of interest that are different from the respondents.

In order for response bias to occur, respondents must have different response rates and responses to particular survey variables. The magnitude of unit nonresponse bias is
determined by the response rate and the differences between respondents and nonrespondents on key survey variables. Although the bias analysis cannot measure response bias since the SCS is a sample survey and it is not known how the population would have responded, the SCS sampling frame has four key student or school characteristic variables for which data are known for respondents and nonrespon-dents-namely, sex, race/ethnicity, household income, and urbanicity-all of which are associated with student victimization. To the extent that there are differential responses by respondents in these groups, nonresponse bias is a concern.

In 2005, the analysis of unit nonresponse bias found evidence of bias for the race, household income, and urbanicity variables. White (non-Hispanic) and Other (nonHispanic) respondents had higher response rates than Black (non-Hispanic) and Hispanic respondents. Respondents from households with an income of \$35,000-\$49,999 and $\$ 50,000$ or more had higher response rates than those from households with incomes of less than $\$ 7,500$, \$7,500-\$14,999, \$15,000-\$24,999, and \$25,000-\$34,999. Respondents who live in urban areas had lower response rates than those who live in rural or suburban areas. Although the extent of nonresponse bias cannot be determined, weighting adjustments, which corrected for differential response rates, should have reduced the problem.

In 2007, the analysis of unit nonresponse bias found evidence of bias by the race/ethnicity and household income variables. Hispanic respondents had lower response rates than respondents of other races/ethnicities. Respondents from households with an income of $\$ 25,000$ or more had higher response rates than those from households with incomes of less than $\$ 25,000$. However, when responding students are compared to the eligible NCVS sample, there were no measurable differences between the responding students and the eligible students, suggesting that the nonresponse bias has little impact on the overall estimates.

In 2009, the analysis of unit nonresponse bias found evidence of potential bias for the race/ethnicity and urbanicity variables. White students and students of other races/ethnicities had higher response rates than did Black and Hispanic respondents. Respondents from households located in rural areas had higher response rates than those from households located in urban areas. However, when responding students are compared to the eligible NCVS sample, there were no measurable differences between the responding students and the eligible students, suggesting that the nonresponse bias has little impact on the overall estimates.

In 2011, the analysis of unit nonresponse bias found evidence of potential bias for the age variable. Respondents 12 to 17 years old had higher response rates than did 18-yearold respondents in the NCVS and SCS interviews. Weighting the data adjusts for unequal selection probabilities and for the effects of nonresponse. The weighting adjustments that correct for differential response rates are created by region, age, race, and sex, and should have reduced the effect of nonresponse.

In 2013, the analysis of unit nonresponse bias found evidence of potential bias for the age variable in the SCS respondent sample. Students age 14 and those from the western region showed percentage bias exceeding 5 percent; however, both subgroups had the highest response rate in their respective categories. All other subgroups evaluated showed less than 1 percent nonresponse bias and had between 0.3 and 2.6 percent difference between the response population and the eligible population.

In the 2015 SCS, evidence of potential nonresponse bias was found in the race, urbanicity, region, and age subgroups. In addition, respondents in the age 14 and rural subgroups had significantly higher nonresponse bias estimates compared to other age and urbanicity subgroups, while respondents who were Asian and respondents who were from the Northeast had significantly lower response bias estimates compared to other race and region subgroups. Thus, the analysis indicates that there are significant nonresponse biases in the 2015 SCS data and that caution should be used when comparing responses among subgroups in the SCS.

For most survey items in most years of the SCS survey, however, response rates have been high-typically over 97 percent of all eligible respondents, meaning there is little potential for item nonresponse bias for most items in the survey. Weights have been developed to compensate for differential probabilities of selection and nonresponse. The weighted data permit inferences about the eligible student population who were enrolled in schools in all SCS data years.

## Federal Bureau of Investigation

The Federal Bureau of Investigation (FBI) collects statistics on crimes from law enforcement agencies throughout the country through the Uniform Crime Reporting (UCR) Program. The UCR Program was conceived in 1929 by the International Association of Chiefs of Police to meet a need for reliable, uniform crime statistics for the nation. In 1930, the FBI was tasked with collecting, publishing, and archiving those statistics. Today, several annual statistical publications, such as the comprehensive Crime in the United States (CIUS), are produced from data provided by over 18,000 law enforcement agencies across the United States. CIUS is an annual publication in which the FBI compiles the volume and rate of crime offenses for the nation, the states, and individual agencies. This report also includes arrest, clearance, and law enforcement employee data.

For more information on the UCR Program, see http:// www.fbi.gov/about-us/cjis/ucr/ucr.

## Supplementary Homicide Reports

Supplementary Homicide Reports (SHR) are a part of the Uniform Crime Reporting (UCR) program of the Federal Bureau of Investigation (FBI). These reports provide incidentlevel information on criminal homicides, including situation type (e.g., number of victims, number of offenders, and whether offenders are known); the age, sex, and race of victims and offenders; the weapon used; circumstances of the incident; and the relationship of the victim to the offender. The data are provided monthly to the FBI by local law enforcement agencies participating in the UCR program. The data include murders and nonnegligent manslaughters in the United States; thus, negligent manslaughters and justifiable homicides have been eliminated from the data.

About 90 percent of homicides are included in the SHR program. However, adjustments can be made to the weights to correct for missing victim reports. Estimates from the SHR program used in this report were generated by the Bureau of Justice Statistics (BJS).

Further information on the SHR program may be obtained from

## Criminal Justice Information Services Division <br> Federal Bureau of Investigation <br> Module D3 <br> 1000 Custer Hollow Road <br> Clarksburg, WV 26306 <br> (304) 625-4995 <br> crimestatsinfo@fbi.gov

## Department of Defense

## Defense Manpower Data Center

The Statistical Information Analysis Division of the Defense Manpower Data Center (DMDC) maintains the largest archive of personnel, manpower, and training data in the Department of Defense (DoD). The DMDC's statistical activities include the personnel survey program, an enlistment testing program to support screening of military applicants, and a client support program to provide statistical support to the Office of the Secretary of Defense. The DMDC collects DoD contract information in support of national economic tables and the Small Business Competitiveness Demonstration Program; it also produces statistics on DoD purchases from educational and nonprofit institutions and from state and local governments.

For more information on the DMDC, see https://www. servicememberscivilreliefact.com/scracvs/defense-manpower-data-center/.

## Institute of Museum and Library Statistics

On October 1, 2007, the administration of the Public Libraries Survey (PLS) and the State Library Agencies (StLA) Survey was transferred from the National Center for Education Statistics to the Institute of Museum and Library Statistics (IMLS).

## IMLS Library Statistics

Public library statistics are collected annually using the PLS and disseminated annually through the Federal-State Cooperative System (FSCS) for Public Library Data. Descriptive statistics are produced for over 9,000 public libraries. The PLS includes information about staffing; operating income and expenditures; type of governance; type of administrative structure; size of collection; and service measures such as reference transactions, public service hours, interlibrary loans, circulation, and library visits. In the FSCS, respondents supply the information electronically, and data are edited and tabulated in machine-readable form.

PLS respondents are public libraries identified by state administrative library agencies in the 50 states, the District of Columbia, and certain U.S. territories. At the state level, FSCS is administered by State Data Coordinators, who are appointed by the chief officer of each state library agency. The State Data Coordinator collects the requested data from local public libraries. The 50 states, District of Columbia, and territories submit data for individual public libraries, which are aggregated to state and national levels.

From 1994 through 2006, NCES conducted the StLA Survey for the 50 states and the District of Columbia. From 2006 to the present, the survey has been released by IMLS (since 2012, it has been known as the State Library Administrative Agency [SLAA] Survey). A state library agency is the official agency of a state that is charged by state law with the extension and development of public library services throughout the state and that has adequate authority under state law to administer state plans in accordance with the provisions of the Library Services and Technology Act (LSTA) of 2003.

Further information on these library surveys can be obtained from

## My Brother's Keeper Initiative

Established by President Obama in 2014, the My Brother's Keeper Initiative is an interagency effort to improve measurably the expected educational and life outcomes for and address the persistent opportunity gaps faced by boys and young men of color. The Initiative established a task force to develop a coordinated federal effort to identify the public and private efforts that are working and how to expand upon them.

The My Brother's Keeper Task Force and the Federal Interagency Forum on Child and Family Statistics have collected federal statistics on a number of national level indicators to provide an initial snapshot of young people's well-
being across multiple domains, including health, nutrition, poverty, education, economic opportunity, criminal justice and more. A selection of these data may be accessed at http:// www2.ed.gov/rschstat/statistics/surveys/mbk/index.html.

Further information about the My Brother's Keeper Initiative may be obtained from https://www.whitehouse.gov/ my-brothers-keeper.

## National Institute on Drug Abuse

## Monitoring the Future Survey

The National Institute on Drug Abuse of the U.S. Department of Health and Human Services is the primary supporter of the long-term study titled "Monitoring the Future: A Continuing Study of American Youth," conducted by the University of Michigan Institute for Social Research. One component of the study deals with student drug abuse. Results of the national sample survey have been published annually since 1975 . With the exception of 1975 , when about 9,400 students participated in the survey, the annual samples comprise roughly 16,000 students in 150 public and private schools. Students complete self-administered questionnaires given to them in their classrooms by University of Michigan personnel. Each year, 8th-, 10th-, and 12th-graders are surveyed (12th-graders since 1975, and 8th- and 10th-graders since 1991). The 8th- and 10th-grade surveys are anonymous, while the 12 th-grade survey is confidential. The 10thgrade samples involve about 17,000 students in 140 schools each year, while the 8th-grade samples have approximately 18,000 students in about 150 schools. In all, approximately 50,000 students from about 420 public and private secondary schools are surveyed annually. Approximately 90 percent of 8th-grade students, 88 percent of 10th-grade students, and 80 percent of 12th-grade students surveyed participated in the study in 2016. Beginning with the class of 1976, a randomly selected sample from each senior class has been followed in the years after high school on a continuing basis.

Understandably, there is some reluctance to admit illegal activities. Also, students who are out of school on the day of the survey are nonrespondents, and the survey does not include high school dropouts. The inclusion of absentees and dropouts would tend to increase the proportion of individuals who had used drugs. A 1983 study found that the inclusion of absentees could increase some of the drug usage estimates by as much as 2.7 percentage points. (Details on that study and its methodology were published in Drug Use Among American High School Students, College Students, and Other Young Adults, by L.D. Johnston, P.M. O'Malley, and J.G. Bachman, available from the National Clearinghouse on Drug Abuse Information, 5600 Fishers Lane, Rockville, MD 20857.)

The 2016 Monitoring the Future survey involved about 45,500 8th-, 10th-, and 12th-grade students in 372 secondary schools nationwide. The first published results were presented in Monitoring the Future, National Results on Drug Use, 1975-2016: Overview, Key Findings on Adolescent

Drug Use, at http://www.monitoringthefuture.org/pubs/ monographs/mtf-overview 2016.pdf.

## National Science Foundation

## Survey of Federal Funds for Research and Development

The annual Survey of Federal Funds for Research and Development is the primary source of information about federal funding for research and development in the United States. It is used by policymakers in the executive and legislative branches of the federal government in determining policies, laws, and regulations affecting science; it is also used by those who follow science trends in every sector of the economy, including university administrators and professors, economic and political analysts, research and development managers inside and outside the government, the science press, and leading members of the science community in the United States and around the world.

The survey's target population consists of the federal agencies that conduct research and development programs, which are identified from information in the President's budget submitted to Congress. In the survey cycle for data collection on fiscal years 2015-17, a total of 28 federal agencies ( 15 federal departments and 13 independent agencies) reported research and development data. Because multiple subdivisions of a federal department were requested to complete the survey in some cases, there were 74 individual respondents. Federal funds data, as collected, span 3 government fiscal years: the fiscal year just completed, the current fiscal year, and the next fiscal year. Actual data are collected for the year just completed; estimates are obtained for the current fiscal year and the next fiscal year.

The data are collected and managed online; this system was designed to help improve survey reporting by offering respondents direct online reporting and editing.

The federal funds survey has an unweighted response rate of 100 percent with no known item nonresponse. The information included in this survey has been stable since fiscal year 1973, when federal obligations for research to universities and colleges by agency and detailed science and engineering fields were added to the survey.

Further information on federal funds for research and development may be obtained from

## Survey of Earned Doctorates

The Survey of Earned Doctorates (SED) has collected basic statistics from the universe of doctoral recipients in the United States each year since 1957. It is supported by six federal agencies: the National Science Foundation, National Institutes of Health, U.S. Department of Education, U.S. Department of Agriculture, National Endowment for the Humanities, and National Aeronautics and Space Administration. With the assistance of institutional coordinators at each doctorate-awarding institution, a survey form is distributed to each person completing the requirements for a research doctorate. Of the 55,006 persons receiving research doctorates granted in 2015, approximately 90 percent responded to the survey. The survey questionnaire obtains information on sex, race/ethnicity, marital status, citizenship, disabilities, dependents, specialty field of doctorate, educational institutions attended, time spent in completion of doctorate, financial support, education debt, postgraduation plans, and educational attainment of parents.

## Survey of Graduate Students and Postdoctorates in Science and Engineering

The Survey of Graduate Students and Postdoctorates in Science and Engineering, also known as the graduate student survey (GSS), is an annual survey of all U.S. academic institutions granting research-based master's degrees or doctorates in science, engineering, or selected health fields. Sponsored by the National Science Foundation and the National Institutes of Health, the survey provides data on the number and characteristics of graduate students, postdoctoral researchers, and doctorateholding nonfaculty researchers in selected health fields. Results are used to assess shifts in graduate enrollment and postdoctorate appointments and trends in financial support.

Data collection for the 2015 GSS began in fall 2015. The survey universe consisted of 412 doctorate-granting and 299 master's-granting institutions, for a total of 711 institutions. There were 824 schools affiliated with these institutions: 525 at doctorate-granting institutions and 299 at master'sgranting institutions.

New procedures to improve coverage of GSS-eligible units were introduced in the 2007 survey cycle and were continued in subsequent cycles. Increased emphasis was given to updating the unit list by providing an exhaustive list of GSS-eligible programs within existing GSS fields. In previous years, only a representative list was provided for each GSS field, which may have resulted in not reporting all eligible units. The set of GSS-eligible fields was also modified. Due to these changes, data for 2007 and later years are not directly comparable with data from previous years.

More recently, the survey universe was modified in 2014 to include 151 new institutions and exclude 2 for-profit institutions; these changes were the result of a comprehensive frame evaluation study conducted from 2010 to 2013 and the annual frame evaluation conducted in the 2013-14 cycle. Additionally, in 2015 some new institutions became eligible for GSS, some institutions changed GSS degree-granting status, and some institutions merged. These changes resulted in the increase in the total number of institutions included in the GSS from 706 in 2014 to 711 in 2105.

## Substance Abuse and Mental Health Services Administration

## National Survey on Drug Use and Health

Conducted by the federal government since 1971 (annually since 1991), the National Survey on Drug Use and Health (NSDUH) is a survey of the civilian, noninstitutionalized population of the United States age 12 or older. It is the primary source of information on the prevalence, patterns, and consequences of alcohol, tobacco, and illegal drug use and abuse. The survey collects data by administering questionnaires to a representative sample of the population (since 1999, the NSDUH interview has been carried out using computer-assisted interviewing). NSDUH collects information from residents of households, noninstitutional group quarters, and civilians living on military bases. The main results of the NSDUH present national estimates of
rates of use, numbers of users, and other measures related to illicit drugs, alcohol, and tobacco products.

Prior to 2002, the survey was called the National Household Survey on Drug Abuse (NHSDA). The 2002 update of the survey's name coincided with improvements to the survey. In light of these improvements, NSDUH data from 2002 and later should not be compared with NHSDA data from 2001 and earlier as a method of assessing changes in substance use over time.

The 2005 NSDUH was the first in a coordinated 5-year sample design providing estimates for all 50 states and the District of Columbia for the years 2005 through 2009. Because the 2005 design enables estimates to be developed by state, states may be viewed as the first level of stratification, as well as a reporting variable.

In the 2015 NSDUH , screening was completed at 132,210 addresses, and 68,073 completed interviews were obtained: 16,955 interviews from adolescents ages 12 to 17 and 51,118 from adults age 18 and over. Weighted response rates for household screening and for interviewing were 79.7 and 69.3 percent, respectively, for an overall response rate of 55.2 percent for persons age 12 and over. The weighted interview response rates were 77.7 percent for adolescents and 68.4 percent for adults.

Further information on the NSDUH may be obtained from

SAMHSA<br>Center for Behavioral Health Statistics and Quality<br>5600 Fishers Lane<br>Rockville, MD 20857<br>http://www.samhsa.gov/data/

## Other Organization Sources <br> ACT

## ACT assessment

The ACT assessment is designed to measure educational development in the areas of English, mathematics, social studies, and natural sciences. The assessment is taken by college-bound high school students and by all graduating seniors in Colorado and Illinois. The test results are used to predict how well students might perform in college.

Prior to the 1984-85 school year, national norms were based on a 10 percent sample of the students taking the test. Since then, national norms have been based on the test scores of all students taking the test. Beginning with 1984-85, these norms have been based on the most recent ACT scores available from students scheduled to graduate in the spring of the year. Duplicate test records are no longer used to produce national figures.

Separate ACT standard scores are computed for English, mathematics, science reasoning, and, as of October 1989, reading. ACT standard scores are reported for each subject area on a scale from 1 to 36. In 2016, the national composite score (the simple average of the four ACT standard scores)
was 20.8 , with a standard deviation of 5.6. The tests emphasize reasoning, analysis, problem solving, and the integration of learning from various sources, as well as the application of these proficiencies to the kinds of tasks college students are expected to perform.

It should be noted that graduating students who take the ACT assessment are not necessarily representative of graduating students nationally. Students who live in the Midwest, Rocky Mountains, Plains, and South are overrepresented among ACT-tested students as compared to graduating students nationally. Students in these areas often aspire to public colleges and universities, which in these jurisdictions require the ACT assessment more often than the SAT test.

Further information on the ACT may be obtained from

## ACT

## The College Board

## Advanced Placement Exam

The Advanced Placement (AP) program is a curriculum sponsored by the College Board that offers high school students the opportunity to take college-level courses in a high school setting. A student taking an AP course in high school can earn college credit for participation by attaining a certain minimum score on the AP exam in that subject area.

The AP program offers more than 30 courses and exams. In most cases, the College Board does not require students to take an AP course before taking an AP exam. AP exams are given in the first two weeks in May. Most of the exams take 2 to 3 hours to complete. The scores for all AP exams range from 1 to 5 , with 5 being the highest score.

## SAT

The Admissions Testing Program of the College Board is made up of a number of college admissions tests, including the Preliminary Scholastic Assessment Test (PSAT) and the Scholastic Assessment Test, now known as the SAT. High school students participate in the testing program as sophomores, juniors, or seniors-some more than once during these three years. If they have taken the tests more than once, only the most recent scores are tabulated. The PSAT and SAT report subscores in the areas of mathematics and verbal ability.

Each year, approximately $11 / 2$ million students take the SAT examination. SAT results are not representative of high school students or college-bound students nationally, however, since the sample is self-selected (i.e., taken by students who need the results to apply to a particular college or university). In addition, public colleges in many states-particularly those in the Midwest, parts of the South, and the West-require ACT scores rather than SAT scores; thus, the proportion of students taking the SAT in these states is very
low and is inappropriate for comparison. The current version of the SAT, which includes an optional writing component among other content, format, and scoring changes, was first administered in March 2016.

Further information on AP and the SAT may be obtained from

The College Board National Office
250 Vesey Street
New York, NY 10281
http://www.collegeboard.org/

## Commonfund Institute

## Higher Education Price Index

Commonfund Institute took over management of the Higher Education Price Index (HEPI) in 2005 from Research Associates of Washington, which originated the index in 1961. HEPI is an inflation index designed specifically to track the main cost drivers in higher education. It measures the average relative level of prices in a fixed basket of goods and services purchased each year by colleges and universities through current fund educational and general expenditures, excluding research.

The main components of HEPI are faculty salaries; administrative salaries; clerical salaries; service employee salaries; fringe benefits; miscellaneous services; supplies and materials; and utilities. These represent the major items purchased for current operations by colleges and universities. Prices for these items are obtained from salary surveys conducted by the American Association of University Professors, the College and University Personnel Association, and the Bureau of Labor Statistics (BLS), as well as from price series for components of BLS's Consumer Price Index (CPI), the Employment Cost Index (EPI), and the Producer Price Index (PPI) published by BLS. Since 2009, data have been consistently drawn from the July-June academic fiscal year. Prior to 2009, data were collected from years with varying endpoints.

HEPI measures price levels from a designated reference year in which budget weights are assigned. This base year is FY 1983 and is assigned a price value of 100.0 for index compilation. An index value of 115.0 , for example, represents a 15 percent price increase over 1983 values.

Further information on HEPI may be obtained from

Commonfund Institute
15 Old Danbury Road
Wilton, CT 06897
https://www.commonfund.org/commonfund-institutehigher-education-price-index-hepi

## Council for Aid to Education

## Survey of Voluntary Support of Education

The Council for Aid to Education, Inc. (CAE) is a nonprofit corporation funded by contributions from businesses.

CAE largely provides consulting and research services to corporations and information on voluntary support services to education institutions. Each year, CAE conducts a survey of colleges and universities and private elementary and secondary schools to obtain information on the amounts, sources, and purposes of private gifts, grants, and bequests received during the academic year.

The annual Voluntary Support of Education (VSE) survey consistently captures about 85 percent of the total voluntary support to colleges and universities in the United States. Institutional reports of voluntary support data from the VSE survey are more comprehensive and detailed than the related data in the Integrated Postsecondary Education Data System (IPEDS) Finance survey conducted by NCES.

The VSE survey is conducted online. All accredited higher education institutions are eligible to participate, and about a quarter of these institutions fill out a survey each year. CAE reviews the survey forms for internal consistency, queries institutions whose data appear out of line with national trends or their own historical data, and makes an effort to clean the data before preparing a computerized database of the results.

Individual institutions and several state systems of higher education use the VSE data to monitor and analyze their fundraising results. CAE uses the data to develop national estimates of giving to education and to report in detail on private support of education. The results from the VSE survey are available to subscribers online and are also published in the annual report Voluntary Support of Education, which may be purchased from CAE.

## Council of Chief State School Officers

## State Education Indicators

The Council of Chief State School Officers (CCSSO) is a nonpartisan, nationwide, nonprofit organization of the public officials who head departments of public education in the 50 states, the District of Columbia, the Department of Defense dependents schools, the Bureau of Indian Education, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and the U.S. Virgin Islands. The CCSSO State Education Indicators project provides leadership in developing a system of state-by-state indicators of the condition of K-12 education. Indicator activities include collecting and reporting statistical indicators by state, tracking state policy changes, assisting with accountability systems, and conducting analysis of trends in education. Key State Educa-
tion Policies on PK-12 Education is one of the publications issued by the State Education Indicators project. It is intended to inform policymakers and educators about the current status of key education policies that define and shape elementary and secondary education in the nation's public schools. State education staff reported on current policies through a survey, and CCSSO staff collected additional assessment information through state websites.

Further information on CCSSO publications may be obtained from

## GED Testing Service

GED Testing Service is a joint venture, begun in 2011, between the American Council on Education (ACE) and Pearson. A GED credential documents high school-level academic
skills. The test was first administered to World War II veterans in 1942 and was subsequently administered to civilians beginning in 1947. The first four generations of the GED test were the original GED test released in 1942, the 1978 series, the 1988 series, and the 2002 series. In 2014, a new test was implemented. A comparison of the 2014 GED test and the 2002 series test is available at http://www.gedtestingservice.com/ uploads/files/2487f6e1ca5659684cbe1f8b16f564d0.pdf.

The annual GED Testing Program Statistical Report provides information on those who take the GED, performance statistics of GED test takers, and some historical background on the GED testing program.

It is important to note that attempting to make comparisons in GED testing across jurisdictions is problematic, since each jurisdiction manages its own GED testing program. Thus, each jurisdiction develops its own policies, and these policies are reflected in a jurisdiction's testing program outcomes (its pass rates, for instance).

Further information on the GED may be obtained from

## GED Testing Service

1919 M Street NW
Suite 600
Washington, DC 20036
http://www.gedtestingservice.com/ged-testing-service

## Graduate Record Examinations Board

## GRE tests

Graduate Record Examinations (GRE) tests are taken by individuals applying to graduate or professional school. GRE offers two types of tests, the GRE General Test and Subject Tests. The GRE General Test, which is mainly taken via computer, measures verbal, quantitative, and analytical writing skills. The analytical writing section (which replaced the analytical reasoning section on the GRE General Test in 2002) consists of two analytical writing tasks. The Subject Tests measure achievement in biochemistry, cell and molecular biology, biology, chemistry, literature in English, mathematics, physics, and psychology. Each graduate institution or division of the institution determines which GRE tests are required for admission.

Individuals may take GRE tests more than once. Score reports only reflect scores earned within the past 5-year period.

Further information on the GRE may be obtained from

## GRE-ETS

Educational Testing Service
P.O. Box 6000

Princeton, NJ 08541

## Institute of International Education

## Open Doors

Each year, the Institute of International Education (IIE) conducts a survey of the number of foreign students studying in American colleges and universities and U.S. students studying abroad. The results of these surveys are reported in the publication Open Doors. All of the regionally accredited institutions in NCES's Integrated Postsecondary Education Data System (IPEDS) are surveyed by IIE. The foreign student enrollment data presented in the Digest of Education Statistics are drawn from IIE surveys that ask U.S. institutions for information on enrollment of foreign students, as well as student characteristics such as country of origin. For the 2014-15 survey, 58.9 percent of the 2,808 institutions surveyed reported data. For 2015-16, 62.6 percent of the 2,818 institutions surveyed reported data.

Surveys on the flows of U.S. college students studying abroad have been conducted since 1985?86. Surveys are sent to U.S. institutions asking them to provide information on the number and characteristics of the students to whom they awarded credit for study abroad during the previous academic year. For the 2013-14 academic year, data were obtained from 1,116 , or 61.3 percent, of the 1,821 institutions surveyed; for the 2014-15 academic year, data were obtained from 1,210, or 66.7 percent, of the 1,814 institutions surveyed.

## International Association for the Evaluation of Educational Achievement

The International Association for the Evaluation of Educational Achievement (IEA) is composed of governmental research centers and national research institutions around the world whose aim is to investigate education problems common among countries. Since its inception in 1958, the IEA has conducted more than 30 research studies of cross-national achievement. The regular cycle of studies encompasses learning in basic school subjects. Examples are the Trends in International Mathematics and Science Study (TIMSS) and the Progress in International Reading Literacy Study (PIRLS). IEA projects also include studies of particular interest to IEA members, such as the TIMSS 1999 Video Study of Mathematics and Science Teaching, the Civic Education Study, and studies on information technology in education.

The international bodies that coordinate international assessments vary in the labels they apply to participating education systems, most of which are countries. IEA differentiates between IEA members, which IEA refers to as "countries" in all cases, and "benchmarking participants." IEA members include countries such as the United States and Ireland, as well as subnational entities such as England and Scotland (which are both part of the United Kingdom), the Flemish community of Belgium, and Hong Kong (a Special Administrative Region of China). IEA benchmarking participants are all subnational entities and include Canadian provinces, U.S. states, and Dubai in the United Arab Emirates (among others). Benchmarking participants, like the participating countries, are given the opportunity to assess the comparative international standing of their students' achievement and to view their curriculum and instruction in an international context.

Some IEA studies, such as TIMSS and PIRLS, include an assessment portion, as well as contextual questionnaires for collecting information about students' home and school experiences. The TIMSS and PIRLS scales, including the scale averages and standard deviations, are designed to remain constant from assessment to assessment so that education systems (including countries and subnational education systems) can compare their scores over time as well as compare their scores directly with the scores of other education systems. Although each scale was created to have a mean of 500 and a standard deviation of 100 , the subject matter and the level of difficulty of items necessarily differ by grade, subject, and domain/dimension. Therefore, direct comparisons between scores across grades, subjects, and different domain/dimension types should not be made.

Further information on the International Association for the Evaluation of Educational Achievement may be obtained from http://www.iea.nl.

## Trends in International Mathematics and Science Study

The Trends in International Mathematics and Science Study (TIMSS, formerly known as the Third International Mathematics and Science Study) provides data on the mathematics and science achievement of U.S. 4th- and 8th-graders compared with that of their peers in other countries. TIMSS collects information through mathematics and science assessments and questionnaires. The questionnaires request information to help provide a context for student performance. They focus on such topics as students' attitudes and beliefs about learning mathematics and science, what students do as part of their mathematics and science lessons, students' completion of homework, and their lives both in and outside of school; teachers' perceptions of their preparedness for teaching mathematics and science, teaching assignments, class size and organization, instructional content and practices, collaboration with other teachers, and participation in professional development activities; and principals' viewpoints on policy and budget responsibilities, curriculum and instruction issues,
and student behavior. The questionnaires also elicit information on the organization of schools and courses. The assessments and questionnaires are designed to specifications in a guiding framework. The TIMSS framework describes the mathematics and science content to be assessed and provides grade-specific objectives, an overview of the assessment design, and guidelines for item development.

TIMSS is on a 4-year cycle. Data collections occurred in 1995, 1999 (8th grade only), 2003, 2007, 2011, and 2015. TIMSS 2015 consisted of assessments in 4th-grade mathematics; numeracy (a less difficult version of 4th-grade mathematics, newly developed for 2015); 8th-grade mathematics; 4th-grade science; and 8th-grade science. In addition, TIMSS 2015 included the third administration of TIMSS Advanced since 1995. TIMSS Advanced is an international comparative study that measures the advanced mathematics and physics achievement of students in their final year of secondary school (the equivalent of 12th grade in the United States) who are taking or have taken advanced courses. The TIMSS 2015 survey also collected policy-relevant information about students, curriculum emphasis, technology use, and teacher preparation and training.

## Progress in International Reading Literacy Study

The Progress in International Reading Literacy Study (PIRLS) provides data on the reading literacy of U.S. 4thgraders compared with that of their peers in other countries. PIRLS is on a 5-year cycle: PIRLS data collections have been conducted in 2001, 2006, and 2011. In 2011, a total of 57 education systems, including 48 IEA members and 9 benchmarking participants, participated in the survey.

PIRLS collects information through a reading literacy assessment and questionnaires that help to provide a context for student performance. Questionnaires are administered to collect information about students' home and school experiences in learning to read. A student questionnaire addresses students' attitudes toward reading and their reading habits. In addition, questionnaires are given to students' teachers and school principals in order to gather information about students' school experiences in developing reading literacy. In countries other than the United States, a parent questionnaire is also administered. The assessments and questionnaires are designed to specifications in a guiding framework. The PIRLS framework describes the reading content to be assessed and provides objectives specific to 4th grade, an overview of the assessment design, and guidelines for item development.

## TIMSS and PIRLS Sampling and Response Rates

## 2011 PIRLS

As is done in all participating countries and other education systems, representative samples of students in the United States are selected. The sample design that was employed by PIRLS in 2011 is generally referred to as a two-stage stratified
cluster sample. In the first stage of sampling, individual schools were selected with a probability proportionate to size (PPS) approach, which means that the probability is proportional to the estimated number of students enrolled in the target grade. In the second stage of sampling, intact classrooms were selected within sampled schools.

PIRLS guidelines call for a minimum of 150 schools to be sampled, with a minimum of 4,000 students assessed. The basic sample design of one classroom per school was designed to yield a total sample of approximately 4,500 students per population.

Because PIRLS was also administered at grade 4 in spring 2011, TIMSS and PIRLS in the United States were administered in the same schools to the extent feasible. Students took either TIMSS or PIRLS on the day of the assessments. About 13,000 U.S. students participated in PIRLS in 2011, joining 300,000 other student participants around the world. Accommodations were not provided for students with disabilities or students who were unable to read or speak the language of the test. These students were excluded from the sample. The IEA requirement is that the overall exclusion rate, which includes exclusions of schools and students, should not exceed more than 5 percent of the national desired target population.

In order to minimize the potential for response biases, the IEA developed participation or response rate standards that apply to all participating education systems and govern whether or not an education system's data are included in the TIMSS or PIRLS international datasets and the way in which its statistics are presented in the international reports. These standards were set using composites of response rates at the school, classroom, and student and teacher levels. Response rates were calculated with and without the inclusion of substitute schools that were selected to replace schools refusing to participate. In the 2011 PIRLS administered in the United States, the weighted school participation rate was 80 percent before the use of substitute schools and 85 percent after the use of replacement schools; the weighted student response rate was 96 percent.

## 2015 TIMSS and TIMSS Advanced

TIMSS 2015 was administered between March and May of 2015 in the United States. The U.S. sample was randomly selected and weighted to be representative of the nation. In order to reliably and accurately represent the performance of each country, international guidelines required that countries sample at least 150 schools and at least 4,000 students per grade (countries with small class sizes of fewer than 30 students per school were directed to consider sampling more schools, more classrooms per school, or both, to meet the minimum target of 4,000 tested students). In the United States, a total of 250 schools and 10,029 students participated in the grade 4 TIMSS survey, and 246 schools and 10,221 students participated in the grade 8 TIMSS (these figures do not include the participation of the state of Florida as a subnational education system, which was separate from and additional to its participation in the U.S. national sample).

TIMSS Advanced, also administered between March and May of 2015 in the United States, required participating countries and other education systems to draw probability samples of students in their final year of secondary schoolISCED Level 3-who were taking or had taken courses in advanced mathematics or who were taking or had taken courses in physics. International guidelines for TIMSS Advanced called for a minimum of 120 schools to be sampled, with a minimum of 3,600 students assessed per subject. In the United States, a total of 241 schools and 2,954 students participated in advanced mathematics, and 165 schools and 2,932 students participated in physics.

In TIMSS 2015, the weighted school response rate for the United States was 77 percent for grade 4 before the use of substitute schools (schools substituted for originally sampled schools that refused to participate) and 85 percent with the inclusion of substitute schools. For grade 8 , the weighted school response rate before the use of substitute schools was 78 percent, and it was 84 percent with the inclusion of substitute schools. The weighted student response rate was 96 percent for grade 4 and 94 percent for grade 8.

In TIMSS Advanced 2015, the weighted school response rate for the United States for advanced mathematics was 72 percent before the use of substitute schools and 76 percent with the inclusion of substitute schools. The weighted school response rate for the United States for physics was 65 percent before the use of substitute schools and 68 percent with the inclusion of substitute schools. The weighted student response rate was 87 percent for advanced mathematics and 85 percent for physics. Student response rates are based on a combined total of students from both sampled and substitute schools.

## National Association of State Directors of Teacher Education and Certification

## NASDTEC Manual/KnowledgeBase

The National Association of State Directors of Teacher Education and Certification (NASDTEC) was organized in 1928 to represent professional standards boards and commissions and state departments of education that are responsible for the preparation, licensure, and discipline of educational personnel. Currently, NASDTEC's membership includes all 50 states, the District of Columbia, the U.S. Department of Defense Education Activity, U.S. territories, and Canadian provinces and territories.

The NASDTEC Manual on the Preparation and Certification of Educational Personnel was printed between 1984 and 2004, when it was replaced by an online publication, KnowledgeBase. KnowledgeBase is an expanded version of the Manual and is the most comprehensive source of state-bystate information pertaining to the certification requirements and preparation of teachers and other school personnel in the United States and Canada.

## National Catholic Educational Association

## The United States Catholic Elementary and Secondary Schools

The National Catholic Educational Association (NCEA) has been providing leadership and service to Catholic education since 1904. NCEA began to publish The United States Catholic Elementary and Secondary Schools: Annual Statistical Report on Schools, Enrollment and Staffing in 1970 because of the lack of educational data on the private sector. The report is based on data gathered by all of the archdiocesan and diocesan offices of education in the United States. These data enable NCEA to present information on school enrollment and staffing patterns for prekindergarten through grade 12. The first part of the report presents data concerning the context of American education, while the following part focuses on statistical data of Catholic schools. Statistics include enrollment by grade level, race/ethnicity, and affiliation.

## National Education Association

## Estimates of School Statistics

The National Education Association (NEA) publishes Estimates of School Statistics annually as part of the report Rankings of the States \& Estimates of School Statistics. Estimates of School Statistics presents projections of public school enrollment, employment and personnel compensation, and finances, as reported by individual state departments of education. The state-level data in these estimates allow broad assessments of trends in the above areas. These data should be looked at with the understanding that the state-level data do not necessarily reflect the varying conditions within a state on education issues.

Data in Estimates of School Statistics are provided by state and District of Columbia departments of education and by other, mostly governmental, sources. Surveys are sent to the departments of education requesting estimated data for the current year and revisions to 4 years of historical data, as necessary. Twice a year, NEA submits current-year estimates on more than 35 education statistics to state departments of education for verification or revision. The estimates are generated using regression analyses and are used only if the states do not provide current data.

Further information on Estimates of School Statistics may be obtained from

NEA Rankings \& Estimates Team—NEA Research

## Organization for Economic Cooperation and Development

The Organization for Economic Cooperation and Development (OECD) publishes analyses of national policies and survey data in education, training, and economics in OECD and partner countries. Newer studies include student survey data on financial literacy and on digital literacy.

## Education at a Glance

To highlight current education issues and create a set of comparative education indicators that represent key features of education systems, OECD initiated the Indicators of Education Systems (INES) project and charged the Centre for Educational Research and Innovation (CERI) with developing the cross-national indicators for it. The development of these indicators involved representatives of the OECD countries and the

OECD Secretariat. Improvements in data quality and comparability among OECD countries have resulted from the country-to-country interaction sponsored through the INES project. The most recent publication in this series is Education at a Glance 2016: OECD Indicators.

Education at a Glance 2016 features data on the 35 OECD countries (Australia, Austria, Belgium, Canada, Chile, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, the Republic of Korea, Latvia, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States) and a number of partner countries, namely, Argentina, Brazil, China, Colombia, Costa Rica, India, Indonesia, Lithuania, the Russian Federation, Saudi Arabia, and South Africa.

The OECD Handbook for Internationally Comparative Education Statistics: Concepts, Standards, Definitions, and Classifications provides countries with specific guidance on how to prepare information for OECD education surveys; facilitates countries' understanding of OECD indicators and their use in policy analysis; and provides a reference for collecting and assimilating educational data. Chapter 7 of the OECD Handbook for Internationally Comparative Education Statistics contains a discussion of data quality issues. Users should examine footnotes carefully to recognize some of the data limitations.

## Program for International Student Assessment

The Program for International Student Assessment (PISA) is a system of international assessments organized by the Organization for Economic Cooperation and Development (OECD), an intergovernmental organization of industrialized countries, that focuses on 15-year-olds' capabilities in reading literacy, mathematics literacy, and science literacy. PISA also includes measures of general, or cross-curricular, competencies such as learning strategies. PISA emphasizes functional skills that students have acquired as they near the end of compulsory schooling.

PISA is a 2-hour exam. Assessment items include a combination of multiple-choice questions and open-ended questions that require students to develop their own response. PISA scores are reported on a scale that ranges from 0 to

1,000 , with the OECD mean set at 500 and a standard deviation set at 100 . In 2015, literacy in science, reading, and mathematics were assessed through a computer-based assessment in the majority of countries, including the United States. Education systems could also participate in optional pencil-and-paper financial literacy assessments and computer-based mathematics and reading assessments. In each education system, the assessment is translated into the primary language of instruction; in the United States, all materials are written in English.

Forty-three education systems participated in the 2000 PISA; 41 education systems participated in 2003; 57 (30 OECD member countries and 27 nonmember countries or education systems) participated in 2006; and 65 (34 OECD member countries and 31 nonmember countries or education systems) participated in 2009. (An additional nine education systems administered the 2009 PISA in 2010.) In PISA 2012, 65 education systems ( 34 OECD member countries and 31 nonmember countries or education systems), as well as the U.S. states of Connecticut, Florida, and Massachusetts, participated. In the 2015 PISA, 73 education systems ( 35 OECD member countries and 31 nonmember countries or education systems), as well as the states of Massachusetts and North Carolina and the territory of Puerto Rico, participated.

To implement PISA, each of the participating education systems scientifically draws a nationally representative sample of 15-year-olds, regardless of grade level. In the PISA 2015 national sample for the United States, about 5,700 students from 177 public and private schools were represented. Massachusetts, North Carolina, and Puerto Rico also participated in PISA 2015 as separate education systems. In Massachusetts, about 1,400 students from 48 public schools participated; in North Carolina, about 1,900 students from 54 public schools participated; and in Puerto Rico, about 1,400 students in 47 public and private schools participated.

The intent of PISA reporting is to provide an overall description of performance in reading literacy, mathematics literacy, and science literacy every 3 years, and to provide a more detailed look at each domain in the years when it is the major focus. These cycles will allow education systems to compare changes in trends for each of the three subject areas over time. In the first cycle, PISA 2000, reading literacy was the major focus, occupying roughly two-thirds of assessment time. For 2003, PISA focused on mathematics literacy as well as the ability of students to solve problems in reallife settings. In 2006, PISA focused on science literacy; in 2009, it focused on reading literacy again; and in 2012, it focused on mathematics literacy. PISA 2015 focused on science, as it did in 2006.

Further information on PISA may be obtained from

Patrick Gonzales<br>International Assessment Branch<br>Assessments Division<br>National Center for Education Statistics<br>550 12th Street SW<br>Washington, DC 20202<br>patrick.gonzales@ed.gov<br>http://nces.ed.gov/surveys/pisa

## Program for the International Assessment of Adult Competencies

The Program for the International Assessment of Adult Competencies (PIAAC) is a cyclical, large-scale study that aims to assess and compare the broad range of basic skills and competencies of adults around the world. Developed under the auspices of the Organization for Economic Cooperation and Development (OECD), it is the most comprehensive international survey of adult skills ever undertaken. Adults were surveyed in 24 participating countries in 2012 and in an additional 9 countries in 2014.

PIAAC focuses on what are deemed basic cognitive and workplace skills necessary to adults' successful participation in 21st-century society and in the global economy. Skills assessed include literacy, numeracy, problem solving in technology-rich environments, and basic reading skills. PIAAC measures the relationships between these skills and other characteristics such as individuals' educational background, workplace experiences, and occupational attainment. PIAAC was administered on laptop computers or in paper-and-pencil mode. In the United States, the background questionnaire was administered in both English and Spanish, and the cognitive assessment was administered only in English.

The 2012 PIAAC assessment for the United States included a nationally representative probability sample of households. This household sample was selected on the basis of a fourstage, stratified area sample: (1) primary sampling units (PSUs) consisting of counties or groups of contiguous counties; (2) secondary sampling units (referred to as segments) consisting of area blocks; (3) housing units containing households; and (4) eligible persons within households. Person-level data were collected through a screener, a background questionnaire, and the assessment.

Based on the screener data, 6,100 U.S. respondents ages 16 to 65 were selected to complete the 2012 background questionnaire and the assessment; 4,898 actually completed the background questionnaire. Of the 1,202 respondents who did not complete the background questionnaire, 112 were unable to do so because of a literacy-related barrier: either the inability to communicate in English or Spanish or a mental disability. Twenty others were unable to complete the questionnaire due to technical problems. The final response rate for the background questionnaire-which included respondents who completed it and respondents who were unable to complete it because of a language problem or mental disability—was 82.2 percent weighted. The overall weighted response rate for the household sample-the product of the component response rates-was 70.3 percent.

The 2014 PIAAC supplement repeated the 2012 administration of PIAAC to an additional sample of U.S. adults in order to enhance the 2012 sample. It included a sample of participants from different households in the PSUs from the 2012 sample.

Key to PIAAC's value is its collaborative and international nature. In the United States, NCES has consulted extensively
with the Department of Labor in the development of the survey, and staff from both agencies are co-representatives of the United States in PIAAC's international governing body. Internationally, PIAAC has been developed through the collaboration of OECD staff and participating countries' representatives from their ministries or departments of education and labor. Through this cooperative effort, all participating countries follow the quality assurance guidelines set by the OECD consortium and closely follow all agreed-upon standards set for survey design, assessment implementation, and reporting of results.

## United Nations Educational, Scientific, and Cultural Organization

## Statistical Yearbook and Global Education Digest

The United Nations Educational, Scientific, and Cultural Organization (UNESCO) conducts annual surveys of education statistics of its member countries. Data from official surveys are supplemented by information obtained by UNESCO through other publications and sources. Each year, more than 200 countries reply to the UNESCO surveys. In some cases, estimates are made by UNESCO for particular items, such as world and continent totals. While great efforts are made to make them as comparable as possible, the data still reflect the vast differences among the countries of the world in the structure of education. While there is some agreement about the reporting of primary and secondary data, tertiary-level data (i.e., postsecondary education data) present numerous substantive problems. Some coun-
tries report only university enrollment, while other countries report all postsecondary enrollment, including enrollment in vocational and technical schools and correspondence programs. A very high proportion of some countries' tertiarylevel students attend institutions in other countries. The member countries that provide data to UNESCO are responsible for their validity. Thus, data for particular countries are subject to nonsampling error and perhaps sampling error as well. Users should examine footnotes carefully to recognize some of the data limitations. UNESCO publishes the data in reports such as the Statistical Yearbook and the Global Education Digest.

## APPENDIX B Definitions

Academic support This category of college expenditures includes expenditures for support services that are an integral part of the institution's primary missions of instruction, research, or public service. It also includes expenditures for libraries, galleries, audio/visual services, academic computing support, ancillary support, academic administration, personnel development, and course and curriculum development.

## Achievement gap See gap.

Achievement levels, NAEP Specific achievement levels for each subject area and grade to provide a context for interpreting student performance. At this time they are being used on a trial basis.

Basic-denotes partial mastery of the knowledge and skills that are fundamental for proficient work at a given grade.

Proficient-represents solid academic performance. Students reaching this level have demonstrated competency over challenging subject matter.

Advanced-signifies superior performance.
Achievement test An examination that measures the extent to which a person has acquired certain information or mastered certain skills, usually as a result of specific instruction.

ACT The ACT (formerly the American College Testing Program) assessment program measures educational development and readiness to pursue college-level coursework in English, mathematics, natural science, and social studies. Student performance on the tests does not reflect innate ability and is influenced by a student's educational preparedness.

Administrative support staff Staff whose activities are concerned with support of teaching and administrative duties of the office of the principal or department chairpersons, including clerical staff and secretaries.

Advanced Placement (AP) A program of tertiary-level courses and examinations, taught by specially qualified teachers, that provides opportunities for secondary school students to earn undergraduate credits for university courses. The schools and teachers offering AP programs must meet College Board requirements and are monitored by the College Board.

Agriculture Courses designed to improve competencies in agricultural occupations. Included is the study of agricultural production, supplies, mechanization and products, agricultural science, forestry, and related services.

Alternative school A public elementary/secondary school that serves students whose needs cannot be met in a regular, special education, or vocational school; may provide nontraditional education; and may serve as an adjunct to a regular school. Although alternative schools fall outside the categories of regular, special education, and vocational education, they may provide similar services or curriculum. Some examples of alternative schools are schools for potential dropouts; residential treatment centers for substance abuse (if they provide elementary or secondary education); schools for chronic truants; and schools for students with behavioral problems.

Appropriation (federal funds) Budget authority provided through the congressional appropriation process that permits federal agencies to incur obligations and to make payments.

Appropriation (institutional revenues) An amount (other than a grant or contract) received from or made available to an institution through an act of a legislative body.

Associate's degree A degree granted for the successful completion of a sub-baccalaureate program of studies, usually requiring at least 2 years (or equivalent) of full-time collegelevel study. This includes degrees granted in a cooperative or work-study program.

Autism See Disabilities, children with.

Autocorrelation Correlation of the error terms from different observations of the same variable. Also called Serial correlation.

Auxiliary enterprises This category includes those essentially self-supporting operations which exist to furnish a service to students, faculty, or staff, and which charge a fee that is directly related to, although not necessarily equal to, the cost of the service. Examples are residence halls, food services, college stores, and intercollegiate athletics.

Average daily attendance (ADA) The aggregate attendance of a school during a reporting period (normally a school year) divided by the number of days school is in session during this period. Only days on which the pupils are under the guidance and direction of teachers should be considered days in session.

Average daily membership (ADM) The aggregate membership of a school during a reporting period (normally a school year) divided by the number of days school is in session during this period. Only days on which the pupils are under the guidance and direction of teachers should be considered as days in session. The ADM for groups of schools having varying lengths of terms is the average of the ADMs obtained for the individual schools. Membership includes all pupils who are enrolled, even if they do not actually attend.

Averaged freshman graduation rate (AFGR) A measure of the percentage of the incoming high school freshman class that graduates 4 years later. It is calculated by taking the number of graduates with a regular diploma and dividing that number by the estimated count of incoming freshman 4 years earlier, as reported through the NCES Common Core of Data (CCD). The estimated count of incoming freshman is the sum of the number of 8th-graders 5 years earlier, the number of 9 th-graders 4 years earlier (when current seniors were freshman), and the number of 10th-graders 3 years earlier, divided by 3. The purpose of this averaging is to account for the high rate of grade retention in the freshman year, which adds 9th-grade repeaters from the previous year to the number of students in the incoming freshman class each year. Ungraded students are allocated to individual grades proportional to each state's enrollment in those grades. The AFGR treats students who transfer out of a school or district in the same way as it treats students from that school or district who drop out.

Bachelor's degree A degree granted for the successful completion of a baccalaureate program of studies, usually requiring at least 4 years (or equivalent) of full-time college-level study. This includes degrees granted in a cooperative or work-study program.

Books Nonperiodical printed publications bound in hard or soft covers, or in loose-leaf format, of at least 49 pages, exclusive of the cover pages; juvenile nonperiodical publications of any length found in hard or soft covers.

Breusch-Godfrey serial correlation LM test A statistic testing the independence of errors in least-squares regression against alternatives of first-order and higher degrees of serial correlation. The test belongs to a class of asymptotic tests known as the Lagrange multiplier (LM) tests.

Budget authority (BA) Authority provided by law to enter into obligations that will result in immediate or future outlays. It may be classified by the period of availability (1-
year, multiple-year, no-year), by the timing of congressional action (current or permanent), or by the manner of determining the amount available (definite or indefinite).

Business Program of instruction that prepares individuals for a variety of activities in planning, organizing, directing, and controlling business office systems and procedures.

Capital outlay Funds for the acquisition of land and buildings; building construction, remodeling, and additions; the initial installation or extension of service systems and other built-in equipment; and site improvement. The category also encompasses architectural and engineering services, including the development of blueprints.

Career/technical education (CTE) In high school, encompasses occupational education, which teaches skills required in specific occupations or occupational clusters, as well as nonoccupational CTE, which includes family and consumer sciences education (i.e., courses that prepare students for roles outside the paid labor market) and general labor market preparation (i.e., courses that teach general employment skills such as word processing and introductory technology skills).

Carnegie unit The number of credits a secondary student received for a course taken every day, one period per day, for a full year; a factor used to standardize all credits indicated on secondary school transcripts across studies.

Catholic school A private school over which a Roman Catholic church group exercises some control or provides some form of subsidy. Catholic schools for the most part include those operated or supported by a parish, a group of parishes, a diocese, or a Catholic religious order.

Central cities The largest cities, with 50,000 or more inhabitants, in a Metropolitan Statistical Area (MSA). Additional cities within the metropolitan area can also be classified as "central cities" if they meet certain employment, population, and employment/residence ratio requirements.

Certificate A formal award certifying the satisfactory completion of a postsecondary education program. Certificates can be awarded at any level of postsecondary education and include awards below the associate's degree level.

Charter school A school providing free public elementary and/or secondary education to eligible students under a specific charter granted by the state legislature or other appropriate authority, and designated by such authority to be a charter school.

City school See Locale codes.
Class size The membership of a class at a given date.

Classification of Instructional Programs (CIP) The CIP is a taxonomic coding scheme that contains titles and descriptions of primarily postsecondary instructional programs. It was developed to facilitate NCES' collection and reporting of postsecondary degree completions by major field of study using standard classifications that capture the majority of reportable program activity. It was originally published in 1980 and was revised in 1985, 1990, 2000, and 2010.

Classification of Secondary School Courses (CSSC) A modification of the Classification of Instructional Programs used for classifying high school courses. The CSSC contains over 2,200 course codes that help compare the thousands of high school transcripts collected from different schools.

Classroom teacher A staff member assigned the professional activities of instructing pupils in self-contained classes or courses, or in classroom situations; usually expressed in full-time equivalents.

Coefficient of variation (CV) Represents the ratio of the standard error to the estimate. For example, a CV of 30 percent indicates that the standard error of the estimate is equal to 30 percent of the estimate's value. The CV is used to compare the amount of variation relative to the magnitude of the estimate. A CV of 30 percent or greater indicates that an estimate should be interpreted with caution. For a discussion of standard errors, see Appendix A: Guide to Sources.

Cohort A group of individuals who have a statistical factor in common, for example, year of birth.

Cohort-component method A method for estimating and projecting a population that is distinguished by its ability to preserve knowledge of an age distribution of a population (which may be of a single sex, race, and Hispanic origin) over time.

College A postsecondary school that offers general or liberal arts education, usually leading to an associate's, bachelor's, master's, or doctor's degree. Junior colleges and community colleges are included under this terminology.

Combined school A school that encompasses instruction at both the elementary and the secondary levels; includes schools starting with grade 6 or below and ending with grade 9 or above.

## Combined school (2007-08 Schools and Staffing Survey)

A school with at least one grade lower than 7 and at least one grade higher than 8 ; schools with only ungraded classes are included with combined schools.

Combined Statistical Area (CSA) A combination of Core Based Statistical Areas (see below), each of which contains a core with a substantial population nucleus as well as adjacent communities having a high degree of economic and
social integration with that core. A CSA is a region with social and economic ties as measured by commuting, but at lower levels than are found within each component area. CSAs represent larger regions that reflect broader social and economic interactions, such as wholesaling, commodity distribution, and weekend recreation activities.

Computer science A group of instructional programs that describes computer and information sciences, including computer programming, data processing, and information systems.

Constant dollars Dollar amounts that have been adjusted by means of price and cost indexes to eliminate inflationary factors and allow direct comparison across years.

Consumer Price Index (CPI) This price index measures the average change in the cost of a fixed market basket of goods and services purchased by consumers. Indexes vary for specific areas or regions, periods of time, major groups of consumer expenditures, and population groups. The CPI reflects spending patterns for two population groups: (1) all urban consumers and urban wage earners and (2) clerical workers. CPIs are calculated for both the calendar year and the school year using the U.S. All Items CPI for All Urban Consumers (CPI-U). The calendar year CPI is the same as the annual CPI-U. The school year CPI is calculated by adding the monthly CPI-U figures, beginning with July of the first year and ending with June of the following year, and then dividing that figure by 12 .

Consumption That portion of income that is spent on the purchase of goods and services rather than being saved.

Control of institutions A classification of institutions of elementary/secondary or postsecondary education by whether the institution is operated by publicly elected or appointed officials and derives its primary support from public funds (public control) or is operated by privately elected or appointed officials and derives its major source of funds from private sources (private control).

Core Based Statistical Area (CBSA) A population nucleus and the nearby communities having a high degree of economic and social integration with that nucleus. Each CBSA includes at least one urban area of 10,000 or more people and one or more counties. In addition to a "central county" (or counties), additional "outlying counties" are included in the CBSA if they meet specified requirements of commuting to or from the central counties.

Credit The unit of value, awarded for the successful completion of certain courses, intended to indicate the quantity of course instruction in relation to the total requirements for a diploma, certificate, or degree. Credits are frequently expressed in terms such as "Carnegie units," "semester credit hours," and "quarter credit hours."

Current dollars Dollar amounts that have not been adjusted to compensate for inflation.

Current expenditures (elementary/secondary) The expenditures for operating local public schools, excluding capital outlay and interest on school debt. These expenditures include such items as salaries for school personnel, benefits, student transportation, school books and materials, and energy costs. Beginning in 1980-81, expenditures for state administration are excluded.

Instruction expenditures Includes expenditures for activities related to the interaction between teacher and students. Includes salaries and benefits for teachers and instructional aides, textbooks, supplies, and purchased services such as instruction via television, webinars, and other online instruction. Also included are tuition expenditures to other local education agencies.

Administration expenditures Includes expenditures for school administration (i.e., the office of the principal, full-time department chairpersons, and graduation expenses), general administration (the superintendent and board of education and their immediate staff), and other support services expenditures.

Transportation Includes expenditures for vehicle operation, monitoring, and vehicle servicing and maintenance.

Food services Includes all expenditures associated with providing food to students and staff in a school or school district. The services include preparing and serving regular and incidental meals or snacks in connection with school activities, as well as the delivery of food to schools.

Enterprise operations Includes expenditures for activities that are financed, at least in part, by user charges, similar to a private business. These include operations funded by sales of products or services, together with amounts for direct program support made by state education agencies for local school districts.

## Current expenditures per pupil in average daily attendance

 Current expenditures for the regular school term divided by the average daily attendance of full-time pupils (or full-time equivalency of pupils) during the term. See also Current expenditures and Average daily attendance.Current-fund expenditures (postsecondary education) Money spent to meet current operating costs, including salaries, wages, utilities, student services, public services, research libraries, scholarships and fellowships, auxiliary enterprises, hospitals, and independent operations; excludes loans, capital expenditures, and investments.

Current-fund revenues (postsecondary education) Money received during the current fiscal year from revenue which can be used to pay obligations currently due, and surpluses reappropriated for the current fiscal year.

Deaf-blindness See Disabilities, children with.

Default rate The percentage of loans that are in delinquency and have not been repaid according to the terms of the loan. According to the federal government, a federal student loan is in default if there has been no payment on the loan in 270 days. The Department of Education calculates a 3-year cohort default rate, which is the percentage of students who entered repayment in a given fiscal year (from October 1 to September 30) and then defaulted within the following 2 fiscal years. For example, the 3year cohort default rate for fiscal year (FY) 2009 is the percentage of borrowers who entered repayment during FY 2009 (any time from October 1, 2008, through September 30, 2009) and who defaulted by the end of FY 2011 (September 30, 2011).

Degree An award conferred by a college, university, or other postsecondary education institution as official recognition for the successful completion of a program of studies. Refers specifically to associate's or higher degrees conferred by degree-granting institutions. See also Associate's degree, Bachelor's degree, Master's degree, and Doctor's degree.

Degree/certificate-seeking student A student enrolled in courses for credit and recognized by the institution as seeking a degree, certificate, or other formal award. High school students also enrolled in postsecondary courses for credit are not considered degree/certificate-seeking. See also Degree and Certificate.

Degree-granting institutions Postsecondary institutions that are eligible for Title IV federal financial aid programs and grant an associate's or higher degree. For an institution to be eligible to participate in Title IV financial aid programs, it must offer a program of at least 300 clock hours in length, have accreditation recognized by the U.S. Department of Education, have been in business for at least 2 years, and have signed a participation agreement with the Department.

Degrees of freedom The number of free or linearly independent sample observations used in the calculation of a statistic. In a time series regression with $t$ time periods and $k$ independent variables including a constant term, there would be $t$ minus $k$ degrees of freedom.

Department of Defense (DoD) dependents schools Schools that are operated by the Department of Defense Education Activity (a civilian agency of the U.S. Department of Defense) and provide comprehensive prekindergarten through 12th-grade educational programs on military installations both within the United States and overseas.

Dependency status A designation of whether postsecondary students are financially dependent on their parents or financially independent of their parents. Undergraduates are assumed to be dependent unless they meet one of the following criteria: are age 24 or older, are married or have legal dependents other than a spouse, are veterans, are orphans or wards of the court, or provide documentation that they self-supporting.

Dependent variable A mathematical variable whose value is determined by that of one or more other variables in a function. In regression analysis, when a random variable, $y$, is expressed as a function of variables $x 1, x 2, \ldots x k$, plus a stochastic term, then $y$ is known as the "dependent variable."

Developmental delay See Disabilities, children with.
Disabilities, children with Those children evaluated as having any of the following impairments and who, by reason thereof, receive special education and related services under the Individuals with Disabilities Education Act (IDEA) according to an Individualized Education Program (IEP), Individualized Family Service Plan (IFSP), or a services plan. There are local variations in the determination of disability conditions, and not all states use all reporting categories.

Autism Having a developmental disability significantly affecting verbal and nonverbal communication and social interaction, generally evident before age 3 , that adversely affects educational performance. Other characteristics often associated with autism are engagement in repetitive activities and stereotyped movements, resistance to environmental change or change in daily routines, and unusual responses to sensory experiences. A child is not considered autistic if the child's educational performance is adversely affected primarily because of an emotional disturbance.

Deaf-blindness Having concomitant hearing and visual impairments which cause such severe communication and other developmental and educational problems that the student cannot be accommodated in special education programs solely for deaf or blind students.
Developmental delay Having developmental delays, as defined at the state level, and as measured by appropriate diagnostic instruments and procedures in one or more of the following cognitive areas: physical development, cognitive development, communication development, social or emotional development, or adaptive development. Applies only to 3- through 9-year-old children.
Emotional disturbance Exhibiting one or more of the following characteristics over a long period of time, to a marked degree, and adversely affecting educational performance: an inability to learn that cannot be explained by intellectual, sensory, or health factors; an inability to build or maintain satisfactory interpersonal relationships with peers and teachers; inappropriate types of behavior or feelings under normal circumstances; a general pervasive mood of unhappiness or depression; or a tendency to develop physical symptoms or fears associated with personal or school problems. This term does not include children who are socially maladjusted, unless they also display one or more of the listed characteristics.

Hearing impairment Having a hearing impairment, whether permanent or fluctuating, that adversely affects the student's educational performance. Also reported in this category is deafness, a hearing impairment so severe that the student is impaired in processing linguistic information through hearing (with or without amplification).

Intellectual disability Having significantly subaverage general intellectual functioning, existing concurrently with defects in adaptive behavior and manifested during the developmental period, which adversely affects the child's educational performance.
Multiple disabilities Having concomitant impairments (such as intellectually disabled-blind, intellectually disabledorthopedically impaired, etc.), the combination of which causes such severe educational problems that the student cannot be accommodated in special education programs solely for one of the impairments. This term does not include deaf-blind students.

Orthopedic impairment Having a severe orthopedic impairment that adversely affects a student's educational performance. The term includes impairment resulting from congenital anomaly, disease, or other causes.

Other health impairment Having limited strength, vitality, or alertness due to chronic or acute health problemssuch as a heart condition, tuberculosis, rheumatic fever, nephritis, asthma, sickle cell anemia, hemophilia, epilepsy, lead poisoning, leukemia, or diabetes-that adversely affect the student's educational performance.

Specific learning disability Having a disorder in one or more of the basic psychological processes involved in understanding or in using spoken or written language, which may manifest itself in an imperfect ability to listen, think, speak, read, write, spell, or do mathematical calculations. The term includes such conditions as perceptual disabilities, brain injury, minimal brain dysfunction, dyslexia, and developmental aphasia. The term does not include children who have learning problems that are primarily the result of visual, hearing, motor, or intellectual disabilities, or of environmental, cultural, or economic disadvantage.

Speech or language impairment Having a communication disorder, such as stuttering, impaired articulation, language impairment, or voice impairment, that adversely affects the student's educational performance.

Traumatic brain injury Having an acquired injury to the brain caused by an external physical force, resulting in total or partial functional disability or psychosocial impairment or both, that adversely affects the student's educational performance. The term applies to open or closed head injuries resulting in impairments in one or more areas, such as cognition; language; memory; attention; reasoning; abstract thinking; judgment; problem-solving; sensory, perceptual, and motor abilities; psychosocial behavior; physical functions; information processing; and speech. The term does not apply to brain injuries that are congenital or degenerative or to brain injuries induced by birth trauma.

Visual impairment Having a visual impairment that, even with correction, adversely affects the student's educational performance. The term includes partially seeing and blind children.

Discipline divisions Degree programs that include breakouts to the 6-digit level of the Classification of Instructional Programs (CIP). See also Fields of study.

Disposable personal income Current income received by people less their contributions for social insurance, personal tax, and nontax payments. It is the income available to people for spending and saving. Nontax payments include passport fees, fines and penalties, donations, and tuitions and fees paid to schools and hospitals operated mainly by the government. See also Personal income.

Distance education Education that uses one or more technologies to deliver instruction to students who are separated from the instructor and to support regular and substantive interaction between the students and the instructor synchronously or asynchronously. Technologies used for instruction may include the following: Internet; one-way and two-way transmissions through open broadcasts, closed circuit, cable, microwave, broadband lines, fiber optics, and satellite or wireless communication devices; audio conferencing; and DVDs and CD-ROMs, if used in a course in conjunction with the technologies listed above.

Doctor's degree The highest award a student can earn for graduate study. Includes such degrees as the Doctor of Education (Ed.D.); Doctor of Juridical Science (S.J.D.); Doctor of Public Health (Dr.P.H.); and Doctor of Philosophy (Ph.D.) in any field, such as agronomy, food technology, education, engineering, public administration, ophthalmology, or radiology. The doctor's degree classification encompasses three main subcategories-research/scholarship degrees, professional practice degrees, and other degreeswhich are described below.

Doctor's degree—research/scholarship A Ph.D. or other doctor's degree that requires advanced work beyond the master's level, including the preparation and defense of a dissertation based on original research, or the planning and execution of an original project demonstrating substantial artistic or scholarly achievement. Examples of this type of degree may include the following and others, as designated by the awarding institution: the Ed.D. (in education), D.M.A. (in musical arts), D.B.A. (in business administration), D.Sc. (in science), D.A. (in arts), or D.M (in medicine).

Doctor's degree—professional practice A doctor's degree that is conferred upon completion of a program providing the knowledge and skills for the recognition, credential, or license required for professional practice. The degree is awarded after a period of study such that the total time to the degree, including both preprofessional and professional preparation, equals at least 6 full-time-equivalent academic years. Some doctor's degrees of this type were formerly classified as first-professional degrees. Examples of this type of degree may include the following and others, as designated by the awarding institution: the D.C. or D.C.M. (in chiropractic); D.D.S. or D.M.D. (in dentistry); L.L.B. or J.D. (in law); M.D. (in medicine); O.D. (in optometry); D.O. (in osteopathic medicine); Pharm.D. (in pharmacy); D.P.M., Pod.D., or D.P. (in podiatry); or D.V.M. (in veterinary medicine).

Doctor's degree-other A doctor's degree that does not meet the definition of either a doctor's degree-research/ scholarship or a doctor's degree-professional practice.

Double exponential smoothing A method that takes a single smoothed average component of demand and smoothes it a second time to allow for estimation of a trend effect.

Dropout The term is used to describe both the event of leaving school before completing high school and the status of an individual who is not in school and who is not a high school completer. High school completers include both graduates of school programs as well as those completing high school through equivalency programs such as the GED program. Transferring from a public school to a private school, for example, is not regarded as a dropout event. A person who drops out of school may later return and graduate but is called a "dropout" at the time he or she leaves school. Measures to describe these behaviors include the event dropout rate (or the closely related school persistence rate), the status dropout rate, and the high school completion rate.

Durbin-Watson statistic A statistic testing the independence of errors in least squares regression against the alternative of first-order serial correlation. The statistic is a simple linear transformation of the first-order serial correlation of residuals and, although its distribution is unknown, it is tested by bounding statistics that follow R. L. Anderson's distribution.

Early childhood school Early childhood program schools serve students in prekindergarten, kindergarten, transitional (or readiness) kindergarten, and/or transitional first (or prefirst) grade.

Econometrics The quantitative examination of economic trends and relationships using statistical techniques, and the development, examination, and refinement of those techniques.

Education specialist/professional diploma A certificate of advanced graduate studies that advance educators in their instructional and leadership skills beyond a master's degree level of competence.

Educational and general expenditures The sum of current funds expenditures on instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, and awards from restricted and unrestricted funds.

Educational attainment The highest grade of regular school attended and completed.

Educational attainment (Current Population Survey) This measure uses March CPS data to estimate the percentage of civilian, noninstitutionalized people who have achieved certain levels of educational attainment. Estimates of educational attainment do not differentiate between those who graduated from public schools, those who graduated from private schools, and those who earned a GED; these estimates also include individuals who earned their credential or completed their highest level of education outside of the United States.

1972-1991 During this period, an individual's educational attainment was considered to be his or her last fully completed year of school. Individuals who completed 12 years of schooling were deemed to be high school graduates, as were those who began but did not complete the first year of college. Respondents who completed 16 or more years of schooling were counted as college graduates.

1992-present Beginning in 1992, CPS asked respondents to report their highest level of school completed or their highest degree received. This change means that some data collected before 1992 are not strictly comparable with data collected from 1992 onward and that care must be taken when making comparisons across years. The revised survey question emphasizes credentials received rather than the last grade level attended or completed. The new categories include the following:

- High school graduate, high school diploma, or the equivalent (e.g., GED)
- Some college but no degree
- Associate's degree in college, occupational/vocational program
- Associate's degree in college, academic program (e.g., A.A., A.S., A.A.S.)
- Bachelor's degree (e.g., B.A., A.B., B.S.)
- Master's degree (e.g., M.A., M.S., M.Eng., M.Ed., M.S.W., M.B.A.)
- Professional school degree (e.g., M.D., D.D.S., D.V.M., LL.B., J.D.)
- Doctor's degree (e.g., Ph.D., Ed.D.)

Elementary education/programs Learning experiences concerned with the knowledge, skills, appreciations, attitudes, and behavioral characteristics that are considered to be needed by all pupils in terms of their awareness of life within our culture and the world of work, and that normally may be achieved during the elementary school years (usually kindergarten through grade 8 or kindergarten through grade 6), as defined by applicable state laws and regulations.

Elementary school A school classified as elementary by state and local practice and composed of any span of grades not above grade 8 .

Elementary/secondary school Includes only schools that are part of state and local school systems, and also most nonprofit private elementary/secondary schools, both religiously affiliated and nonsectarian. Includes regular, alternative, vocational, and special education schools. U.S. totals exclude federal schools for American Indians, and federal schools on military posts and other federal installations.

Emotional disturbance See Disabilities, children with.

Employees in degree-granting institutions Persons employed by degree-granting institutions, who are classified into the following occupational categories in this publication:

Executive/administrative/managerial staff Employees whose assignments require management of the institution or of a customarily recognized department or subdivision thereof. These employees perform work that is directly related to management policies or general business operations and that requires them to exercise discretion and independent judgment.

Faculty (instruction/research/public service) Employees whose principal activities are for the purpose of providing instruction or teaching, research, or public service. These employees may hold such titles as professor, associate professor, assistant professor, instructor, or lecturer. Graduate assistants are not included in this category.

Graduate assistants Graduate-level students who are employed on a part-time basis for the primary purpose of assisting in classroom or laboratory instruction or in the conduct of research.

Nonprofessional staff Employees whose primary activities can be classified as one of the following: technical and paraprofessional work (which generally requires less formal training and experience than required for professional status); clerical and secretarial work; skilled crafts work; or service/maintenance work.

Other professional staff Employees who perform academic support, student service, and institutional support and who need either a degree at the bachelor's or higher level or experience of such kind and amount as to provide a comparable background.

Professional staff Employees who are classified as executive/administrative/managerial staff, faculty, graduate assistants, or other professional staff.

Employment Includes civilian, noninstitutional people who (1) worked during any part of the survey week as paid employees; worked in their own business, profession, or farm; or worked 15 hours or more as unpaid workers in a family-owned enterprise; or (2) were not working but had jobs or businesses from which they were temporarily absent due to illness, bad weather, vacation, labor-management dispute, or personal reasons whether or not they were seeking another job.

Employment (Current Population Survey) According to the October Current Population Survey (CPS), employed persons are persons age 16 or older who, during the reference week, (1) did any work at all (at least 1 hour) as paid employees or (2) were not working but had jobs or businesses from which they were temporarily absent because of vacation, illness, bad weather, child care problems, maternity or paternity leave, labor-management dispute, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs.

Employment status A classification of individuals as employed (either full or part time), unemployed (looking for work or on layoff), or not in the labor force (due to being retired, having unpaid employment, or some other reason).

Endowment A trust fund set aside to provide a perpetual source of revenue from the proceeds of the endowment investments. Endowment funds are often created by donations from benefactors of an institution, who may designate the use of the endowment revenue. Normally, institutions or their representatives manage the investments, but they are not permitted to spend the endowment fund itself, only the proceeds from the investments. Typical uses of endowments would be an endowed chair for a particular department or for a scholarship fund. Endowment totals tabulated in this book also include funds functioning as endowments, such as funds left over from the previous year and placed with the endowment investments by the institution. These funds may be withdrawn by the institution and spent as current funds at any time. Endowments are evaluated by two different measures, book value and market value. Book value is the purchase price of the endowment investment. Market value is the current worth of the endowment investment. Thus, the book value of a stock held in an endowment fund would be the purchase price of the stock. The market value of the stock would be its selling price as of a given day.

Engineering Instructional programs that describe the mathematical and natural science knowledge gained by study, experience, and practice and applied with judgment to develop ways to utilize the materials and forces of nature economically. Includes programs that prepare individuals to support and assist engineers and similar professionals.

English A group of instructional programs that describes the English language arts, including composition, creative writing, and the study of literature.

English language learner (ELL) An individual who, due to any of the reasons listed below, has sufficient difficulty speaking, reading, writing, or understanding the English language to be denied the opportunity to learn successfully in classrooms where the language of instruction is English or to participate fully in the larger U.S. society. Such an individual (1) was not born in the United States or has a native language other than English; (2) comes from environments where a language other than English is dominant; or (3) is an American Indian or Alaska Native and comes from environments where a language other than English has had a significant impact on the individual's level of English language proficiency.

Enrollment The total number of students registered in a given school unit at a given time, generally in the fall of a year. At the postsecondary level, separate counts are also available for fulltime and part-time students, as well as full-time-equivalent enrollment. See also Full-time enrollment, Full-time-equivalent (FTE) enrollment, and Part-time enrollment.

Estimate A numerical value obtained from a statistical sample and assigned to a population parameter. The particular value yielded by an estimator in a given set of circumstances or the rule by which such particular values are calculated.

Estimating equation An equation involving observed quantities and an unknown that serves to estimate the latter.

Estimation Estimation is concerned with inference about the numerical value of unknown population values from incomplete data, such as a sample. If a single figure is calculated for each unknown parameter, the process is called point estimation. If an interval is calculated within which the parameter is likely, in some sense, to lie, the process is called interval estimation.

## Executive/administrative/managerial staff See Employees

 in degree-granting institutions.Expenditures, Total For elementary/secondary schools, these include all charges for current outlays plus capital outlays and interest on school debt. For degree-granting institutions, these include current outlays plus capital outlays. For government, these include charges net of recoveries and other correcting transactions other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Government expenditures include only external transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments.

Expenditures per pupil Charges incurred for a particular period of time divided by a student unit of measure, such as average daily attendance or fall enrollment.

Exponential smoothing A method used in time series analysis to smooth or to predict a series. There are various forms, but all are based on the supposition that more remote history has less importance than more recent history.

Expulsion Removing a student from his or her regular school for an extended length of time or permanently for disciplinary purposes.

Extracurricular activities Activities that are not part of the required curriculum and that take place outside of the regular course of study. They include both school-sponsored (e.g., varsity athletics, drama, and debate clubs) and communitysponsored (e.g., hobby clubs and youth organizations like the Junior Chamber of Commerce or Boy Scouts) activities.

## Faculty (instruction/research/public service) See Employ-

 ees in degree-granting institutions.Family A group of two or more people (one of whom is the householder) related by birth, marriage, or adoption and residing together. All such people (including related subfamily members) are considered as members of one family.

Family income Includes all monetary income from all sources (including jobs, businesses, interest, rent, and Social Security payments) over a 12 -month period. The income of nonrelatives living in the household is excluded, but the income of all family members age 15 or older (age 14 or older in years prior to 1989), including those temporarily living outside of the household, is included. In the October Current Population Survey, family income is determined from a single question asked of the household respondent.

Federal funds Amounts collected and used by the federal government for the general purposes of the government. The major federal fund is the general fund, which is derived from general taxes and borrowing. Other types of federal fund accounts include special funds (earmarked for a specific purpose other than a business-like activity), public enterprise funds (earmarked for a business-like activity conducted primarily with the public), and intragovernmental funds (earmarked for a businesslike activity conducted primarily within the government).

## Federal sources (postsecondary degree-granting institutions)

 Includes federal appropriations, grants, and contracts, and federally funded research and development centers (FFRDCs). Federally subsidized student loans are not included.Fields of study The primary field of concentration in postsecondary certificates and degrees. In the Integrated Postsecondary Education Data System (IPEDS), refers to degree programs that are broken out only to the 2-digit level of the Classification of Instructional Programs (CIP). See also Discipline divisions.

Financial aid Grants, loans, assistantships, scholarships, fellowships, tuition waivers, tuition discounts, veteran's benefits, employer aid (tuition reimbursement), and other monies (other than from relatives or friends) provided to students to help them meet expenses. Except where designated, includes Title IV subsidized and unsubsidized loans made directly to students.

First-order serial correlation When errors in one time period are correlated directly with errors in the ensuing time period.

First-professional degree NCES no longer uses this classification. Most degrees formerly classified as first-professional (such as M.D., D.D.S., Pharm.D., D.V.M., and J.D.) are now classified as doctor's degrees-professional practice. However, master's of divinity degrees are now classified as master's degrees.

First-time student (undergraduate) A student who has no prior postsecondary experience (except as noted below) attending any institution for the first time at the undergraduate level. Includes students enrolled in the fall term who attended college for the first time in the prior summer term, and students who entered with advanced standing (college credits earned before graduation from high school).

Fiscal year A period of 12 months for which accounting records are compiled. Institutions and states may designate their own accounting period, though most states use a July 1 through June 30 accounting year. The yearly accounting period for the federal government begins on October 1 and ends on the following September 30. The fiscal year is designated by the calendar year in which it ends; e.g., fiscal year 2006 begins on October 1, 2005, and ends on September 30, 2006. (From fiscal year 1844 to fiscal year 1976, the federal fiscal year began on July 1 and ended on the following June 30.)

Forecast An estimate of the future based on rational study and analysis of available pertinent data, as opposed to subjective prediction.

Forecasting Assessing the magnitude that a quantity will assume at some future point in time, as distinct from "estimation," which attempts to assess the magnitude of an already existent quantity.

Foreign languages A group of instructional programs that describes the structure and use of language that is common or indigenous to people of a given community or nation, geographical area, or cultural traditions. Programs cover such features as sound, literature, syntax, phonology, semantics, sentences, prose, and verse, as well as the development of skills and attitudes used in communicating and evaluating thoughts and feelings through oral and written language.

For-profit institution A private institution in which the individual(s) or agency in control receives compensation other than wages, rent, or other expenses for the assumption of risk.

Free or reduced-price lunch See National School Lunch Program.

Full-time enrollment The number of students enrolled in postsecondary education courses with total credit load equal to at least 75 percent of the normal full-time course load. At the undergraduate level, full-time enrollment typically includes students who have a credit load of 12 or more semester or quarter credits. At the postbaccalaureate level, full-time enrollment includes students who typically have a credit load of 9 or more semester or quarter credits, as well as other students who are considered full time by their institutions.

Full-time-equivalent (FTE) enrollment For postsecondary institutions, enrollment of full-time students, plus the fulltime equivalent of part-time students. The full-time equivalent of the part-time students is estimated using different factors depending on the type and control of institution and level of student.

Full-time-equivalent (FTE) staff Full-time staff, plus the full-time equivalent of the part-time staff.

Full-time-equivalent teacher See Instructional staff.

Full-time instructional faculty Those members of the instruction/research staff who are employed full time as defined by the institution, including faculty with released time for research and faculty on sabbatical leave. Full-time counts exclude faculty who are employed to teach less than two semesters, three quarters, two trimesters, or two 4month sessions; replacements for faculty on sabbatical leave or those on leave without pay; faculty for preclinical and clinical medicine; faculty who are donating their services; faculty who are members of military organizations and paid on a different pay scale than civilian employees; those academic officers whose primary duties are administrative; and graduate students who assist in the instruction of courses.

Full-time worker In educational institutions, an employee whose position requires being on the job on school days throughout the school year for at least the number of hours the schools are in session. For higher education, a member of an educational institution's staff who is employed full time, as defined by the institution.

Function A mathematical correspondence that assigns exactly one element of one set to each element of the same or another set. A variable that depends on and varies with another.

Functional form A mathematical statement of the relationship among the variables in a model.

Gap Occurs when an outcome-for example, average test score or level of educational attainment-is higher for one group than for another group, and the difference between the two groups' outcomes is statistically significant.

GED certificate This award is received following successful completion of the GED test. The GED program-sponsored by the GED Testing Service (a joint venture of the American Council on Education and Pearson)—enables individuals to demonstrate that they have acquired a level of learning comparable to that of high school graduates. See also High school equivalency certificate.

GED program Academic instruction to prepare people to take the high school equivalency examination. Formerly known as the General Educational Development program. See also GED recipient.

GED recipient A person who has obtained certification of high school equivalency by meeting state requirements and passing an approved exam, which is intended to provide an appraisal of the person's achievement or performance in the broad subject matter areas usually required for high school graduation.

General administration support services Includes salary, benefits, supplies, and contractual fees for boards of education staff and executive administration. Excludes state administration.

General program A program of studies designed to prepare students for the common activities of a citizen, family member, and worker. A general program of studies may include instruction in both academic and vocational areas.

Geographic region One of the four regions of the United States used by the U.S. Census Bureau, as follows:

| Northeast | Midwest |
| :---: | :---: |
| Connecticut (CT) | Illinois (IL) |
| Maine (ME) | Indiana (IN) |
| Massachusetts (MA) | Iowa (IA) |
| New Hampshire (NH) | Kansas (KS) |
| New Jersey (NJ) | Michigan (MI) |
| New York (NY) | Minnesota (MN) |
| Pennsylvania (PA) | Missouri (MO) |
| Rhode Island (RI) | Nebraska (NE) |
| Vermont (VT) | North Dakota (ND) |
|  | Ohio (OH) |
|  | South Dakota (SD) |

Government appropriation An amount (other than a grant or contract) received from or made available to an institution through an act of a legislative body.

Government grant or contract Revenues received by a postsecondary institution from a government agency for a specific research project or other program. Examples are research projects, training programs, and student financial assistance.

Graduate An individual who has received formal recognition for the successful completion of a prescribed program of studies.

Graduate assistants See Employees in degree-granting institutions.

Graduate enrollment The number of students who are working toward a master's or doctor's degree and students who are in postbaccalaureate classes but not in degree programs.

Graduate Record Examination (GRE) Multiple-choice examinations administered by the Educational Testing Service and taken by college students who intend to attend certain graduate schools. There are two types of testing available: (1) the general exam which measures critical thinking, analytical writing, verbal reasoning, and quantitative reasoning skills, and (2) the subject test which is offered in eight specific subjects and gauges undergraduate achievement in a specific field. The subject tests are intended for those who have majored in or have extensive background in that specific area.

Graduation Formal recognition given to an individual for the successful completion of a prescribed program of studies.

Gross domestic product (GDP) The total national output of goods and services valued at market prices. GDP can be viewed in terms of expenditure categories that include purchases of goods and services by consumers and government, gross private domestic investment, and net exports of goods and services. The goods and services included are largely those bought for final use (excluding illegal transactions) in the market economy. A number of inclusions, however, represent imputed values, the most important of which is rental value of owner-occupied housing.

Group quarters Living arrangements where people live or stay in a group situation that is owned or managed by an entity or organization providing housing and/or services for the residents. Group quarters include such places as college residence halls, residential treatment centers, skilled nursing facilities, group homes, military barracks, correctional facilities, and workers' dormitories.

Noninstitutionalized group quarters Include college and university housing, military quarters, facilities for workers and religious groups, and temporary shelters for the homeless.

Institutionalized group quarters Include adult and juvenile correctional facilities, nursing facilities, and other health care facilities.

## Handicapped See Disabilities, children with.

Head Start A local public or private nonprofit or for-profit entity authorized by the Department of Health and Human Services' Administration for Children and Families to operate a Head Start program to serve children age 3 to compulsory school age, pursuant to section 641 (b) and (d) of the Head Start Act.

Hearing impairment See Disabilities, children with.

High school A secondary school offering the final years of high school work necessary for graduation. A high school is usually either a 3-year school that includes grades 10,11 , and 12 or a 4 -year school that includes grades $9,10,11$, and 12.

High school (2007-08 Schools and Staffing Survey) A school with no grade lower than 7 and at least one grade higher than 8.

High school completer An individual who has been awarded a high school diploma or an equivalent credential, including a GED certificate.

High school diploma A formal document regulated by the state certifying the successful completion of a prescribed secondary school program of studies. In some states or communities, high school diplomas are differentiated by type, such as an academic diploma, a general diploma, or a vocational diploma.

High school equivalency certificate A formal document certifying that an individual has met the state requirements for high school graduation equivalency by obtaining satisfactory scores on an approved examination and meeting other performance requirements (if any) set by a state education agency or other appropriate body. One particular version of this certificate is the GED test. The GED test is a comprehensive test used primarily to appraise the educational development of students who have not completed their formal high school education and who may earn a high school equivalency certificate by achieving satisfactory scores. GEDs are awarded by the states or other agencies, and the test is developed and distributed by the GED Testing Service (a joint venture of the American Council on Education and Pearson).

High school program A program of studies designed to prepare students for employment and postsecondary education. Three types of programs are often distinguished-academic, vocational, and general. An academic program is designed to prepare students for continued study at a college or university. A vocational program is designed to prepare students for employment in one or more semiskilled, skilled, or technical occupations. A general program is designed to provide students with the understanding and competence to function effectively in a free society and usually represents a mixture of academic and vocational components.

Higher education Study beyond secondary school at an institution that offers programs terminating in an associate's, bachelor's, or higher degree.

Higher education institutions (basic classification and Carnegie classification) See Postsecondary institutions (basic classification by level) and Postsecondary institutions (Carnegie classification of degree-granting institutions).

Higher Education Price Index A price index that measures average changes in the prices of goods and services purchased by colleges and universities through current-fund education and general expenditures (excluding expenditures for sponsored research and auxiliary enterprises).

Historically black colleges and universities Accredited higher education institutions established prior to 1964 with the principal mission of educating black Americans. Federal regulations (20 USC 1061 (2)) allow for certain exceptions of the founding date.

Hours worked per week According to the October Current Population Survey, the number of hours a respondent worked in all jobs in the week prior to the survey interview.

Household All the people who occupy a housing unit. A house, an apartment, a mobile home, a group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the occupants do not live and eat with any other people in the structure, and there is direct access from the outside or through a common hall.

Housing unit A house, an apartment, a mobile home, a group of rooms, or a single room that is occupied as separate living quarters.

Income tax Taxes levied on net income, that is, on gross income less certain deductions permitted by law. These taxes can be levied on individuals or on corporations or unincorporated businesses where the income is taxed distinctly from individual income.

Independent operations A group of self-supporting activities under control of a college or university. For purposes of financial surveys conducted by the National Center for Education Statistics, this category is composed principally of federally funded research and development centers (FFRDC).

Independent variable In regression analysis, a random variable, $y$, is expressed as a function of variables $x 1, x 2, \ldots x k$, plus a stochastic term; the $x$ 's are known as "independent variables."

Individuals with Disabilities Education Act (IDEA) IDEA is a federal law enacted in 1990 and reauthorized in 1997 and 2004. IDEA requires services to children with disabilities throughout the nation. IDEA governs how states and public agencies provide early intervention, special education, and related services to eligible infants, toddlers, children, and youth with disabilities. Infants and toddlers with disabilities (birth-age 2) and their families receive early intervention services under IDEA, Part C. Children and youth (ages 3-21) receive special education and related services under IDEA, Part B.

Inflation A rise in the general level of prices of goods and services in an economy over a period of time, which generally corresponds to a decline in the real value of money or a
loss of purchasing power. See also Constant dollars and Purchasing Power Parity indexes.

Institutional support The category of higher education expenditures that includes day-to-day operational support for colleges, excluding expenditures for physical plant operations. Examples of institutional support include general administrative services, executive direction and planning, legal and fiscal operations, and community relations.

Instruction (colleges and universities) That functional category including expenditures of the colleges, schools, departments, and other instructional divisions of higher education institutions and expenditures for departmental research and public service that are not separately budgeted; includes expenditures for both credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (e.g., academic deans).

Instruction (elementary and secondary) Instruction encompasses all activities dealing directly with the interaction between teachers and students. Teaching may be provided for students in a school classroom, in another location such as a home or hospital, and in other learning situations such as those involving co-curricular activities. Instruction may be provided through some other approved medium, such as the Internet, television, radio, telephone, and correspondence.

Instructional staff Full-time-equivalent number of positions, not the number of different individuals occupying the positions during the school year. In local schools, includes all public elementary and secondary (junior and senior high) day-school positions that are in the nature of teaching or in the improvement of the teaching-learning situation; includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff, and excludes administrative staff, attendance personnel, clerical personnel, and junior college staff.

Instructional support services Includes salary, benefits, supplies, and contractual fees for staff providing instructional improvement, educational media (library and audiovisual), and other instructional support services.

Intellectual disability See Disabilities, children with.
Interest on debt Includes expenditures for long-term debt service interest payments (i.e., those longer than 1 year).

International baccalaureate (IB) A recognized international program of primary, middle, and secondary studies leading to the International Baccalaureate (IB) Diploma. This diploma (or certificate) is recognized in Europe and elsewhere as qualifying holders for direct access to university studies. Schools offering the IB program are approved by the International Baccalaureate Organization (IBO) and their regional office and may use IBO instructional materials, local school materials, or a combination.

International finance data Include data on public and private expenditures for educational institutions. Educational institutions directly provide instructional programs (i.e., teaching) to individuals in an organized group setting or through distance education. Business enterprises or other institutions that provide short-term courses of training or instruction to individuals on a "one-to-one" basis are not included. Where noted, international finance data may also include publicly subsidized spending on education-related purchases, such as school books, living costs, and transportation.

Public expenditures Corresponds to the nonrepayable current and capital expenditures of all levels of the government directly related to education. Expenditures that are not directly related to education (e.g., cultures, sports, youth activities) are, in principle, not included. Expenditures on education by other ministries or equivalent institutions (e.g., Health and Agriculture) are included. Public subsidies for students’ living expenses are excluded to ensure international comparability of the data.

Private expenditures Refers to expenditures funded by private sources (i.e., households and other private entities). "Households" means students and their families. "Other private entities" includes private business firms and nonprofit organizations, including religious organizations, charitable organizations, and business and labor associations. Private expenditures are composed of school fees, the cost of materials (such as textbooks and teaching equipment), transportation costs (if organized by the school), the cost of meals (if provided by the school), boarding fees, and expenditures by employers on initial vocational training.

Current expenditures Includes final consumption expenditures (e.g., compensation of employees, consumption of intermediate goods and services, consumption of fixed capital, and military expenditures); property income paid; subsidies; and other current transfers paid.

Capital expenditures Includes spending to acquire and improve fixed capital assets, land, intangible assets, government stocks, and nonmilitary, nonfinancial assets, as well as spending to finance net capital transfers.

## International Standard Classification of Education

 (ISCED) Used to compare educational systems in different countries. ISCED is the standard used by many countries to report education statistics to the United Nations Educational, Scientific, and Cultural Organization (UNESCO) and the Organization for Economic Cooperation and Development (OECD). ISCED was revised in 2011.ISCED 2011 ISCED 2011 divides educational systems into the following nine categories, based on eight levels of education.

ISCED Level 0 Education preceding the first level (early childhood education) includes early childhood programs that target children below the age of entry into primary education.

ISCED Level 01 Early childhood educational development programs are generally designed for children younger than 3 years.

ISCED Level 02 Pre-primary education preceding the first level usually begins at age 3,4 , or 5 (sometimes earlier) and lasts from 1 to 3 years, when it is provided. In the United States, this level includes nursery school and kindergarten.

ISCED Level 1 Education at the first level (primary or elementary education) usually begins at age 5,6 , or 7 and continues for about 4 to 6 years. For the United States, the first level starts with 1st grade and ends with 6th grade.

ISCED Level 2 Education at the second level (lower secondary education) typically begins at about age 11 or 12 and continues for about 2 to 6 years. For the United States, the second level starts with 7th grade and typically ends with 9th grade. Education at the lower secondary level continues the basic programs of the first level, although teaching is typically more subject focused, often using more specialized teachers who conduct classes in their field of specialization. The main criterion for distinguishing lower secondary education from primary education is whether programs begin to be organized in a more subject-oriented pattern, using more specialized teachers conducting classes in their field of specialization. If there is no clear breakpoint for this organizational change, lower secondary education is considered to begin at the end of 6 years of primary education. In countries with no clear division between lower secondary and upper secondary education, and where lower secondary education lasts for more than 3 years, only the first 3 years following primary education are counted as lower secondary education.

ISCED Level 3 Education at the third level (upper secondary education) typically begins at age 15 or 16 and lasts for approximately 3 years. In the United States, the third level starts with 10th grade and ends with 12th grade. Upper secondary education is the final stage of secondary education in most OECD countries. Instruction is often organized along subject-matter lines, in contrast to the lower secondary level, and teachers typically must have a higher level, or more subject-specific, qualification. There are substantial differences in the typical duration of programs both across and between countries, ranging from 2 to 5 years of schooling. The main criteria for classifications are (1) national boundaries between lower and upper secondary education and (2) admission into educational programs, which usually requires the completion of lower secondary education or a combination of basic education and life experience that demonstrates the ability to handle the subject matter in upper secondary schools. Includes programs designed to review the content of third level programs, such as preparatory courses for tertiary education entrance examinations, and programs leading to a qualification equivalent to upper secondary general education.

ISCED Level 4 Education at the fourth level (postsecondary nontertiary education) straddles the boundary between secondary and postsecondary education. This program of study, which is primarily vocational in nature, is generally taken after the completion of secondary school and typically lasts from 6 months to 2 years. Although the content of these programs may not be significantly more advanced than upper secondary programs, these programs serve to broaden the knowledge of participants who have already gained an upper secondary qualification.
ISCED Level 5 Education at the fifth level (shortcycle tertiary education) is noticeably more complex than in upper secondary programs giving access to this level. Programs at the fifth level typically provide practically based, occupationally specific content and prepare students to enter the labor market. However, the fifth level may also provide a pathway to other tertiary education programs (the sixth or seventh level). Short cycle-tertiary programs last for at least 2 years, and usually for no more than 3. In the United States, this level includes associate's degrees.

ISCED Level 6 Education at the sixth level (bachelor's or equivalent level) is longer and usually more theoretically oriented than programs at the fifth level, but may include practical components. Entry into these programs normally requires the completion of a third or fourth level program. They typically have a duration of 3 to 4 years of full-time study. Programs at the sixth level do not necessarily require the preparation of a substantive thesis or dissertation.

ISCED Level 7 Education at the seventh level (master's or equivalent level) has significantly more complex and specialized content than programs at the sixth level. The content at the seventh level is often designed to provide participants with advanced academic and/or professional knowledge, skills, and competencies, leading to a second degree or equivalent qualification. Programs at this level may have a substantial research component but do not yet lead to the award of a doctoral qualification. In the United States, this level includes professional degrees such as J.D., M.D., and D.D.S., as well as master degrees.

ISCED Level 8 Education at the eighth level (doctoral or equivalent level) is provided in graduate and professional schools that generally require a university degree or diploma as a minimum condition for admission. Programs at this level lead to the award of an advanced, postgraduate degree, such as a Ph.D. The theoretical duration of these programs is 3 years of full-time enrollment in most countries (for a cumulative total of at least 7 years at the tertiary level), although the length of the actual enrollment is often longer. Programs at this level are devoted to advanced study and original research.

ISCED 1997 ISCED 1997 divides educational systems into the following seven categories, based on six levels of education.

ISCED Level 0 Education preceding the first level (early childhood education) usually begins at age 3,4 , or 5 (sometimes earlier) and lasts from 1 to 3 years, when it is provided. In the United States, this level includes nursery school and kindergarten.

ISCED Level 1 Education at the first level (primary or elementary education) usually begins at age 5,6 , or 7 and continues for about 4 to 6 years. For the United States, the first level starts with 1st grade and ends with 6th grade.

ISCED Level 2 Education at the second level (lower secondary education) typically begins at about age 11 or 12 and continues for about 2 to 6 years. For the United States, the second level starts with 7th grade and typically ends with 9th grade. Education at the lower secondary level continues the basic programs of the first level, although teaching is typically more subject focused, often using more specialized teachers who conduct classes in their field of specialization. The main criterion for distinguishing lower secondary education from primary education is whether programs begin to be organized in a more subject-oriented pattern, using more specialized teachers conducting classes in their field of specialization. If there is no clear breakpoint for this organizational change, lower secondary education is considered to begin at the end of 6 years of primary education. In countries with no clear division between lower secondary and upper secondary education, and where lower secondary education lasts for more than 3 years, only the first 3 years following primary education are counted as lower secondary education.

ISCED Level 3 Education at the third level (upper secondary education) typically begins at age 15 or 16 and lasts for approximately 3 years. In the United States, the third level starts with 10th grade and ends with 12th grade. Upper secondary education is the final stage of secondary education in most OECD countries. Instruction is often organized along subjectmatter lines, in contrast to the lower secondary level, and teachers typically must have a higher level, or more subject-specific, qualification. There are substantial differences in the typical duration of programs both across and between countries, ranging from 2 to 5 years of schooling. The main criteria for classifications are (1) national boundaries between lower and upper secondary education and (2) admission into educational programs, which usually requires the completion of lower secondary education or a combination of basic education and life experience that demonstrates the ability to handle the subject matter in upper secondary schools.

ISCED Level 4 Education at the fourth level (postsecondary nontertiary education) straddles the boundary between secondary and postsecondary education. This program of study, which is primarily vocational in nature, is generally taken after the completion of secondary school and typically lasts from 6 months to 2 years. Although the content of these programs may not be significantly more advanced than upper secondary programs, these programs serve to broaden the knowledge of participants who have already gained an upper secondary qualification.

ISCED Level 5 Education at the fifth level (first stage of tertiary education) includes programs with more advanced content than those offered at the two previous levels. Entry into programs at the fifth level normally requires successful completion of either of the two previous levels.

ISCED Level 5A Tertiary-type A programs provide an education that is largely theoretical and is intended to provide sufficient qualifications for gaining entry into advanced research programs and professions with high skill requirements. Entry into these programs normally requires the successful completion of an upper secondary education; admission is competitive in most cases. The minimum cumulative theoretical duration at this level is 3 years of full-time enrollment. In the United States, tertiary-type A programs include first university programs that last approximately 4 years and lead to the award of a bachelor's degree and second university programs that lead to a master's degree or a first-professional degree such as an M.D., a J.D., or a D.V.M.

ISCED Level 5B Tertiary-type B programs are typically shorter than tertiary-type A programs and focus on practical, technical, or occupational skills for direct entry into the labor market, although they may cover some theoretical foundations in the respective programs. They have a minimum duration of 2 years of full-time enrollment at the tertiary level. In the United States, such programs are often provided at community colleges and lead to an associate's degree.

ISCED Level 6 Education at the sixth level (advanced research qualification) is provided in graduate and professional schools that generally require a university degree or diploma as a minimum condition for admission. Programs at this level lead to the award of an advanced, postgraduate degree, such as a Ph.D. The theoretical duration of these programs is 3 years of full-time enrollment in most countries (for a cumulative total of at least 7 years at levels five and six), although the length of the actual enrollment is often longer. Programs at this level are devoted to advanced study and original research.

Interpolation See Linear interpolation.

Junior high school A separately organized and administered secondary school intermediate between the elementary and senior high schools. A junior high school is usually either a 3 -year school that includes grades 7,8 , and 9 or a 2 year school that includes grades 7 and 8.

Labor force People employed (either full time or part time) as civilians, unemployed but looking for work, or in the armed services during the survey week. The "civilian labor force" comprises all civilians classified as employed or unemployed. See also Unemployed.

Lag An event occurring at time $t+k(k>0)$ is said to lag behind an event occurring at time $t$, the extent of the lag being $k$. An event occurring $k$ time periods before another may be regarded as having a negative lag.

Land-grant colleges The First Morrill Act of 1862 facilitated the establishment of colleges through grants of land or funds in lieu of land. The Second Morrill Act in 1890 provided for money grants and for the establishment of landgrant colleges and universities for Blacks in those states with dual systems of higher education.

Lead time When forecasting a statistic, the number of time periods since the last time period of actual data for that statistic used in producing the forecast.

Level of school A classification of elementary/secondary schools by instructional level. Includes elementary schools, secondary schools, and combined elementary and secondary schools. See also Elementary school, Secondary school, and Combined school.

Limited-English proficient Refers to an individual who was not born in the United States and whose native language is a language other than English, or who comes from an environment where a language other than English has had a significant impact on the individual's level of English language proficiency. It may also refer to an individual who is migratory, whose native language is a language other than English, and who comes from an environment where a language other than English is dominant; and whose difficulties in speaking, reading, writing, or understanding the English language may be sufficient to deny the individual the ability to meet the state's proficient level of achievement on state assessments as specified under the No Child Left Behind Act, the ability to successfully achieve in classrooms where the language of instruction is English, or the opportunity to participate fully in society. See also English language learner.

Linear interpolation A method that allows the prediction of an unknown value if any two particular values on the same scale are known and the rate of change is assumed constant.

## Local education agency (LEA) See School district.

Locale codes A classification system to describe a type of location. The "Metro-Centric" locale codes, developed in the 1980s, classified all schools and school districts based on their county's proximity to a Metropolitan Statistical Area (MSA) and their specific location's population size and density. In 2006, the "Urban-Centric" locale codes were introduced. These locale codes are based on an address's proximity to an urbanized area. For more information see http://nces.ed.gov/ccd/rural locales.asp.

## Pre-2006 Metro-Centric Locale Codes

Large City: A central city of a consolidated metropolitan statistical area (CMSA) or MSA, with the city having a population greater than or equal to 250,000 .
Mid-size City: A central city of a CMSA or MSA, with the city having a population less than 250,000.

Urban Fringe of a Large City: Any territory within a CMSA or MSA of a Large City and defined as urban by the Census Bureau.

Urban Fringe of a Mid-size City: Any territory within a CMSA or MSA of a Mid-size City and defined as urban by the Census Bureau.
Large Town: An incorporated place or Census-designated place with a population greater than or equal to 25,000 and located outside a CMSA or MSA.

Small Town: An incorporated place or Census-designated place with a population less than 25,000 and greater than or equal to 2,500 and located outside a CMSA or MSA.

Rural, Outside MSA: Any territory designated as rural by the Census Bureau that is outside a CMSA or MSA of a Large or Mid-size City.

Rural, Inside MSA: Any territory designated as rural by the Census Bureau that is within a CMSA or MSA of a Large or Mid-size City.

## 2006 Urban-Centric Locale Codes

City, Large: Territory inside an urbanized area and inside a principal city with population of 250,000 or more.
City, Midsize: Territory inside an urbanized area and inside a principal city with population less than 250,000 and greater than or equal to 100,000 .
City, Small: Territory inside an urbanized area and inside a principal city with population less than 100,000.

Suburb, Large: Territory outside a principal city and inside an urbanized area with population of 250,000 or more.

Suburb, Midsize: Territory outside a principal city and inside an urbanized area with population less than 250,000 and greater than or equal to 100,000 .

Suburb, Small: Territory outside a principal city and inside an urbanized area with population less than 100,000 .

Town, Fringe: Territory inside an urban cluster that is less than or equal to 10 miles from an urbanized area.

Town, Distant: Territory inside an urban cluster that is more than 10 miles and less than or equal to 35 miles from an urbanized area.
Town, Remote: Territory inside an urban cluster that is more than 35 miles from an urbanized area.

Rural, Fringe: Census-defined rural territory that is less than or equal to 5 miles from an urbanized area, as well as rural territory that is less than or equal to 2.5 miles from an urban cluster.

Rural, Distant: Census-defined rural territory that is more than 5 miles but less than or equal to 25 miles from an urbanized area, as well as rural territory that is more than 2.5 miles but less than or equal to 10 miles from an urban cluster.

Rural, Remote: Census-defined rural territory that is more than 25 miles from an urbanized area and is also more than 10 miles from an urban cluster.

Magnet school or program A special school or program designed to reduce, prevent, or eliminate racial isolation and/or to provide an academic or social focus on a particular theme.

Mandatory transfer A transfer of current funds that must be made in order to fulfill a binding legal obligation of a postsecondary institution. Included under mandatory transfers are debt service provisions relating to academic and administrative buildings, including (1) amounts set aside for debt retirement and interest and (2) required provisions for renewal and replacement of buildings to the extent these are not financed from other funds.

Margin of error The range of potential true or actual values for a sample survey estimate. The margin of error depends on several factors such as the amount of variation in the responses, the size and representativeness of the sample, and the size of the subgroup for which the estimate is computed. The magnitude of the margin of error is represented by the standard error of the estimate.

Master's degree A degree awarded for successful completion of a program generally requiring 1 or 2 years of fulltime college-level study beyond the bachelor's degree. One type of master's degree, including the Master of Arts degree, or M.A., and the Master of Science degree, or M.S., is awarded in the liberal arts and sciences for advanced scholarship in a subject field or discipline and demonstrated ability to perform scholarly research. A second type of master's degree is awarded for the completion of a professionally oriented program, for example, an M.Ed. in education, an M.B.A. in business administration, an M.F.A. in fine arts, an M.M. in music, an M.S.W. in social work, and an M.P.A. in public administration. Some master's degrees-such as divinity degrees (M.Div. or M.H.L./Rav), which were formerly classified as "first-professional"-may require more than 2 years of full-time study beyond the bachelor's degree.

Mathematics A group of instructional programs that describes the science of numbers and their operations, interrelations, combinations, generalizations, and abstractions and of space configurations and their structure, measurement, transformations, and generalizations.

Mean absolute percentage error (MAPE) The average value of the absolute value of errors expressed in percentage terms.

Mean test score The score obtained by dividing the sum of the scores of all individuals in a group by the number of individuals in that group for which scores are available.

Median earnings The amount that divides the income distribution into two equal groups, half having income above that amount and half having income below that amount. Earnings include all wage and salary income. Unlike mean earnings, median earnings either do not change or change very little in response to extreme observations.

Middle school A school with no grade lower than 5 and no grade higher than 8 .

Migration Geographic mobility involving a change of usual residence between clearly defined geographic units, that is, between counties, states, or regions.

Minimum-competency testing Measuring the acquisition of competence or skills to or beyond a certain specified standard.

Model A system of postulates, data, and inferences presented as a mathematical description of a phenomenon, such as an actual system or process. The actual phenomenon is represented by the model in order to explain, predict, and control it.

Montessori school A school that provides instruction using Montessori teaching methods.

Multiple disabilities See Disabilities, children with.
National Assessment of Educational Progress (NAEP) See Appendix A: Guide to Sources.

National School Lunch Program Established by President Truman in 1946, the program is a federally assisted meal program operated in public and private nonprofit schools and residential child care centers. To be eligible for free lunch, a student must be from a household with an income at or below 130 percent of the federal poverty guideline; to be eligible for reduced-price lunch, a student must be from a household with an income between 130 percent and 185 percent of the federal poverty guideline.

Newly qualified teachers People who: (1) first became eligible for a teaching license during the period of the study referenced or who were teaching at the time of survey, but were not certified or eligible for a teaching license; and (2) had never held full-time, regular teaching positions (as opposed to sub-
stitute) prior to completing the requirements for the degree that brought them into the survey.

Non-degree-granting institutions Postsecondary institutions that participate in Title IV federal financial aid programs but do not offer accredited 4-year or 2-year degree programs. Includes some institutions transitioning to higher level program offerings, though still classified at a lower level.

Nonprofessional staff See Employees in degree-granting institutions.

Nonprofit institution A private institution in which the individual(s) or agency in control receives no compensation other than wages, rent, or other expenses for the assumption of risk. Nonprofit institutions may be either independent nonprofit (i.e., having no religious affiliation) or religiously affiliated.

Nonresident alien A person who is not a citizen of the United States and who is in this country on a temporary basis and does not have the right to remain indefinitely.

Nonsectarian school Nonsectarian schools do not have a religious orientation or purpose and are categorized as regular, special program emphasis, or special education schools. See also Regular school, Special program emphasis school, and Special education school.

Nonsupervisory instructional staff People such as curriculum specialists, counselors, librarians, remedial specialists, and others possessing education certification, but not responsible for day-to-day teaching of the same group of pupils.

Nursery school An instructional program for groups of children during the year or years preceding kindergarten, which provides educational experiences under the direction of teachers. See also Prekindergarten and Preschool.

Obligations Amounts of orders placed, contracts awarded, services received, or similar legally binding commitments made by federal agencies during a given period that will require outlays during the same or some future period.

Occupied housing unit Separate living quarters with occupants currently inhabiting the unit. See also Housing unit.

Off-budget federal entities Organizational entities, federally owned in whole or in part, whose transactions belong in the budget under current budget accounting concepts, but that have been excluded from the budget totals under provisions of law. An example of an off-budget federal entity is the Federal Financing Bank, which provides student loans under the Direct Loan Program.

On-budget funding Federal funding for education programs that is tied to appropriations. On-budget funding does not include the Direct Loan Program, under which student loans are provided by the Federal Financing Bank, an off-budget federal entity. See also Off-budget federal entities.

Operation and maintenance services Includes salary, benefits, supplies, and contractual fees for supervision of operations and maintenance, operating buildings (heating, lighting, ventilating, repair, and replacement), care and upkeep of grounds and equipment, vehicle operations and maintenance (other than student transportation), security, and other operations and maintenance services.

Ordinary least squares (OLS) The estimator that minimizes the sum of squared residuals.

## Organization for Economic Cooperation and Development

 (OECD) An intergovernmental organization of industrialized countries that serves as a forum for member countries to cooperate in research and policy development on social and economic topics of common interest. In addition to member countries, partner countries contribute to the OECD's work in a sustained and comprehensive manner.Orthopedic impairment See Disabilities, children with.
Other health impairment See Disabilities, children with.
Other professional staff See Employees in degree-granting institutions.

Other religious school Other religious schools have a religious orientation or purpose, but are not Roman Catholic. Other religious schools are categorized according to religious association membership as Conservative Christian, other affiliated, or unaffiliated.

Other support services Includes salary, benefits, supplies, and contractual fees for business support services, central support services, and other support services not otherwise classified.

Other support services staff All staff not reported in other categories. This group includes media personnel, social workers, bus drivers, security, cafeteria workers, and other staff.

Outlays The value of checks issued, interest accrued on the public debt, or other payments made, net of refunds and reimbursements.

Parameter A quantity that describes a statistical population.

Part-time enrollment The number of students enrolled in postsecondary education courses with a total credit load less than 75 percent of the normal full-time credit load. At the undergraduate level, part-time enrollment typically includes students who have a credit load of less than 12 semester or quarter credits. At the postbaccalaureate level, part-time enrollment typically includes students who have a credit load of less than 9 semester or quarter credits.

Pass-through transaction A payment that a postsecondary institution applies directly to a student's account. The payment "passes through" the institution for the student's benefit. Most private institutions treat Pell grants as pass-through transactions. At these institutions, any Pell grant funds that are applied to a student's tuition are reported as tuition revenues. In contrast, the vast majority of public institutions report Pell grants both as federal revenues and as allowances that reduce tuition revenues.

Personal income Current income received by people from all sources, minus their personal contributions for social insurance. Classified as "people" are individuals (including owners of unincorporated firms), nonprofit institutions serving individuals, private trust funds, and private noninsured welfare funds. Personal income includes transfers (payments not resulting from current production) from government and business such as social security benefits and military pensions, but excludes transfers among people.

Physical plant assets Includes the values of land, buildings, and equipment owned, rented, or utilized by colleges. Does not include those plant values that are a part of endowment or other capital fund investments in real estate; excludes construction in progress.

Postbaccalaureate enrollment The number of students working toward advanced degrees and of students enrolled in graduate-level classes but not enrolled in degree programs. See also Graduate enrollment.

Postsecondary education The provision of formal instructional programs with a curriculum designed primarily for students who have completed the requirements for a high school diploma or equivalent. This includes programs of an academic, vocational, and continuing professional education purpose, and excludes avocational and adult basic education programs.

## Postsecondary institutions (basic classification by level)

4-year institution An institution offering at least a 4-year program of college-level studies wholly or principally creditable toward a baccalaureate degree.

2-year institution An institution offering at least a 2-year program of college-level studies that terminates in an associate degree or is principally creditable toward a baccalaureate degree. Data prior to 1996 include some institutions that have a less-than-2-year program, but were designated as higher education institutions in the Higher Education General Information Survey.

Less-than-2-year institution An institution that offers programs of less than 2 years' duration below the baccalaureate level. Includes occupational and vocational schools with programs that do not exceed 1,800 contact hours.

## Postsecondary institutions (2005 Carnegie classification of degree-granting institutions)

Doctorate-granting Characterized by a significant level and breadth of activity in commitment to doctoral-level education as measured by the number of doctorate recipients and the diversity in doctoral-level program offerings. These institutions are assigned to one of the three subcategories listed below based on level of research activity (for more information on the research activity index used to assign institutions to the subcategories, see http://carnegieclassifications.iu.edu/):

Research university, very high Characterized by a very high level of research activity.

Research university, high Characterized by a high level of research activity.

Doctoral/research university Awarding at least 20 doctor's degrees per year, but not having a high level of research activity.

Master's Characterized by diverse postbaccalaureate programs but not engaged in significant doctoral-level education.

Baccalaureate Characterized by primary emphasis on general undergraduate, baccalaureate-level education. Not significantly engaged in postbaccalaureate education.

Special focus Baccalaureate or postbaccalaureate institution emphasizing one area (plus closely related specialties), such as business or engineering. The programmatic emphasis is measured by the percentage of degrees granted in the program area.

Associate's Institutions conferring at least 90 percent of their degrees and awards for work below the bachelor's level. In NCES tables, excludes all institutions offering any 4-year programs leading to a bachelor's degree.

Tribal Colleges and universities that are members of the American Indian Higher Education Consortium, as identified in IPEDS Institutional Characteristics.

Poverty (official measure) The U.S. Census Bureau uses a set of money income thresholds that vary by family size and composition. A family, along with each individual in it, is considered poor if the family's total income is less than that family's threshold. The poverty thresholds do not vary geographically and are adjusted annually for inflation using the Consumer Price Index. The official poverty definition counts money income before taxes and does not include capital gains and noncash benefits (such as public housing, Medicaid, and food stamps). See also Supplemental Poverty Measure (SPM).

Prekindergarten Preprimary education for children typically ages 3-4 who have not yet entered kindergarten. It may offer a program of general education or special education and may be part of a collaborative effort with Head Start.

Preschool An instructional program enrolling children generally younger than 5 years of age and organized to provide children with educational experiences under professionally qualified teachers during the year or years immediately preceding kindergarten (or prior to entry into elementary school when there is no kindergarten). See also Nursery school and Prekindergarten.

Primary school A school with at least one grade lower than 5 and no grade higher than 8.

Private institution An institution that is controlled by an individual or agency other than a state, a subdivision of a state, or the federal government; that is usually supported primarily by other than public funds; and the operation of whose program rests with other than publicly elected or appointed officials.

Private nonprofit institution An institution in which the individual(s) or agency in control receives no compensation other than wages, rent, or other expenses for the assumption of risk. These include both independent nonprofit institutions and those affiliated with a religious organization.

Private for-profit institution An institution in which the individual(s) or agency in control receives compensation other than wages, rent, or other expenses for the assumption of risk (e.g., proprietary schools).

Private school Private elementary/secondary schools surveyed by the Private School Universe Survey (PSS) are assigned to one of three major categories (Catholic, other religious, or nonsectarian) and, within each major category, one of three subcategories based on the school's religious affiliation provided by respondents.

Catholic Schools categorized according to governance, provided by Catholic school respondents, into parochial, diocesan, and private schools.

Other religious Schools that have a religious orientation or purpose but are not Roman Catholic. Other religious schools are categorized according to religious association membership, provided by respondents, into Conservative Christian, other affiliated, and unaffiliated schools. Conservative Christian schools are those "Other religious" schools with membership in at least one of four associations: Accelerated Christian Education, American Association of Christian Schools, Association of Christian Schools International, and Oral Roberts University Education Fellowship. Affiliated schools are those "Other religious" schools not classified as Conservative Christian with membership in at least 1 of 11 associationsAssociation of Christian Teachers and Schools, Christian Schools International, Evangelical Lutheran Education Association, Friends Council on Education, General Conference of the Seventh-Day Adventist Church, Islamic School League of America, National Association of Episcopal Schools, National Christian School Association, National Society for Hebrew Day Schools, Solomon

Schechter Day Schools, and Southern Baptist Association of Christian Schools-or indicating membership in "other religious school associations." Unaffiliated schools are those "Other religious" schools that have a religious orientation or purpose but are not classified as Conservative Christian or affiliated.

Nonsectarian Schools that do not have a religious orientation or purpose and are categorized according to program emphasis, provided by respondents, into regular, special emphasis, and special education schools. Regular schools are those that have a regular elementary/secondary or early childhood program emphasis. Special emphasis schools are those that have a Montessori, vocational/ technical, alternative, or special program emphasis. Special education schools are those that have a special education program emphasis.

Professional staff See Employees in degree-granting institutions.

Program for International Student Assessment (PISA) See Appendix A: Guide to Sources.

Projection In relation to a time series, an estimate of future values based on a current trend.

Property tax The sum of money collected from a tax levied against the value of property.

Proprietary (for profit) institution A private institution in which the individual(s) or agency in control receives compensation other than wages, rent, or other expenses for the assumption of risk.

Public school or institution A school or institution controlled and operated by publicly elected or appointed officials and deriving its primary support from public funds.

Pupil/teacher ratio The enrollment of pupils at a given period of time, divided by the full-time-equivalent number of classroom teachers serving these pupils during the same period.

Purchasing Power Parity (PPP) indexes PPP exchange rates, or indexes, are the currency exchange rates that equalize the purchasing power of different currencies, meaning that when a given sum of money is converted into different currencies at the PPP exchange rates, it will buy the same basket of goods and services in all countries. PPP indexes are the rates of currency conversion that eliminate the difference in price levels among countries. Thus, when expenditures on gross domestic product (GDP) for different countries are converted into a common currency by means of PPP indexes, they are expressed at the same set of international prices, so that comparisons among countries reflect only differences in the volume of goods and services purchased.
$\boldsymbol{R}^{2}$ The coefficient of determination; the square of the correlation coefficient between the dependent variable and its ordinary least squares (OLS) estimate.

Racial/ethnic group Classification indicating general racial or ethnic heritage. Race/ethnicity data are based on the Hispanic ethnic category and the race categories listed below (five single-race categories, plus the Two or more races category). Race categories exclude persons of Hispanic ethnicity unless otherwise noted.

White A person having origins in any of the original peoples of Europe, the Middle East, or North Africa.

Black or African American A person having origins in any of the black racial groups of Africa. Used interchangeably with the shortened term Black.

Hispanic or Latino A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race. Used interchangeably with the shortened term Hispanic.

Asian A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam. Prior to 2010-11, the Common Core of Data (CCD) combined Asian and Pacific Islander categories.

Native Hawaiian or Other Pacific Islander A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. Prior to 2010-11, the Common Core of Data (CCD) combined Asian and Pacific Islander categories. Used interchangeably with the shortened term Pacific Islander.

American Indian or Alaska Native A person having origins in any of the original peoples of North and South America (including Central America), and who maintains tribal affiliation or community attachment.

Two or more races A person identifying himself or herself as of two or more of the following race groups: White, Black, Asian, Native Hawaiian or Other Pacific Islander, or American Indian or Alaska Native. Some, but not all, reporting districts use this category. "Two or more races" was introduced in the 2000 Census and became a regular category for data collection in the Current Population Survey in 2003. The category is sometimes excluded from a historical series of data with constant categories. It is sometimes included within the category "Other."

Region See Geographic region.
Regression analysis A statistical technique for investigating and modeling the relationship between variables.

Regular school A public elementary/secondary or charter school providing instruction and education services that does not focus primarily on special education, vocational/ technical education, or alternative education.

Related children Related children in a family include own children and all other children in the household who are related to the householder by birth, marriage, or adoption.

Remedial education Instruction for a student lacking those reading, writing, or math skills necessary to perform collegelevel work at the level required by the attended institution.

Resident population Includes civilian population and armed forces personnel residing within the United States; excludes armed forces personnel residing overseas.

Retention in grade Retaining a student in the same grade from one school year to the next.

Revenue All funds received from external sources, net of refunds, and correcting transactions. Noncash transactions, such as receipt of services, commodities, or other receipts in kind are excluded, as are funds received from the issuance of debt, liquidation of investments, and nonroutine sale of property.

Revenue receipts Additions to assets that do not incur an obligation that must be met at some future date and do not represent exchanges of property for money. Assets must be available for expenditures.

Rho A measure of the correlation coefficient between errors in time period $t$ and time period $t$ minus 1 .

Rural school See Locale codes.

Salary The total amount regularly paid or stipulated to be paid to an individual, before deductions, for personal services rendered while on the payroll of a business or organization.

Sales and services Revenues derived from the sales of goods or services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products.

Sales tax Tax imposed upon the sale and consumption of goods and services. It can be imposed either as a general tax on the retail price of all goods and services sold or as a tax on the sale of selected goods and services.
$\boldsymbol{S A T}$ An examination administered by the Educational Testing Service and used to predict the facility with which an individual will progress in learning college-level academic subjects. It was formerly called the Scholastic Assessment Test.

Scholarships and fellowships This category of college expenditures applies only to money given in the form of outright grants and trainee stipends to individuals enrolled in formal coursework, either for credit or not. Aid to students in the form of tuition or fee remissions is included. College work-study funds are excluded and are reported under the program in which the student is working.

School A division of the school system consisting of students in one or more grades or other identifiable groups and organized to give instruction of a defined type. One school may share a building with another school or one school may be housed in several buildings. Excludes schools that have closed or are planned for the future.

School administration support services Includes salary, benefits, supplies, and contractual fees for the office of the principal, full-time department chairpersons, and graduation expenses.

School climate The social system and culture of the school, including the organizational structure of the school and values and expectations within it.

School district An education agency at the local level that exists primarily to operate public schools or to contract for public school services. Synonyms are "local basic administrative unit" and "local education agency."

Science The body of related courses concerned with knowledge of the physical and biological world and with the processes of discovering and validating this knowledge.

Secondary enrollment The total number of students registered in a school beginning with the next grade following an elementary or middle school (usually 7,8 , or 9 ) and ending with or below grade 12 at a given time.

Secondary instructional level The general level of instruction provided for pupils in secondary schools (generally covering grades 7 through 12 or 9 through 12) and any instruction of a comparable nature and difficulty provided for adults and youth beyond the age of compulsory school attendance.

Secondary school A school comprising any span of grades beginning with the next grade following an elementary or middle school (usually 7,8 , or 9 ) and ending with or below grade 12. Both junior high schools and senior high schools are included.

Senior high school A secondary school offering the final years of high school work necessary for graduation.

Serial correlation Correlation of the error terms from different observations of the same variable. Also called Autocorrelation.

Serial volumes Publications issued in successive parts, usually at regular intervals, and as a rule, intended to be continued indefinitely. Serials include periodicals, newspapers, annuals, memoirs, proceedings, and transactions of societies.

Social studies A group of instructional programs that describes the substantive portions of behavior, past and present activities, interactions, and organizations of people associated together for religious, benevolent, cultural, scientific, political, patriotic, or other purposes.

Socioeconomic status (SES) The SES index is a composite of often equally weighted, standardized components, such as father's education, mother's education, family income, father's occupation, and household items. The terms high, middle, and low SES refer to ranges of the weighted SES composite index distribution.

Special education Direct instructional activities or special learning experiences designed primarily for students identified as having exceptionalities in one or more aspects of the cognitive process or as being underachievers in relation to general level or model of their overall abilities. Such services usually are directed at students with the following conditions: (1) physically disabled; (2) emotionally disabled; (3) culturally different, including compensatory education; (4) intellectually disabled; and (5) students with learning disabilities. Programs for the mentally gifted and talented are also included in some special education programs. See also Disabilities, children with.

Special education school A public elementary/secondary school that focuses primarily on special education for children with disabilities and that adapts curriculum, materials, or instruction for students served. See also Disabilities, children with.

Special program emphasis school A science/mathematics school, a performing arts high school, a foreign language immersion school, and a talented/gifted school are examples of schools that offer a special program emphasis.

Specific learning disability See Disabilities, children with.
Speech or language impairment See Disabilities, children with.
Standard error of estimate An expression for the standard deviation of the observed values about a regression line. An estimate of the variation likely to be encountered in making predictions from the regression equation.

Standardized test A test composed of a systematic sampling of behavior, administered and scored according to specific instructions, capable of being interpreted in terms of adequate norms, and for which there are data on reliability and validity.

Standardized test performance The weighted distributions of composite scores from standardized tests used to group students according to performance.

Status dropout rate The percentage of individuals within a given age range who are not enrolled in school and lack a high school credential, regardless of when they dropped out.

Status dropout rate (Current Population Survey) The percentage of civilian, noninstitutionalized young people ages 16-24 who are not in school and have not earned a high school credential (either a diploma or equivalency credential such as a GED certificate). The numerator of the status dropout rate for a given year is the number of individuals ages 16-24 who, as of October of that year, have not completed a
high school credential and are not currently enrolled in school. The denominator is the total number of individuals ages 16-24 in the United States in October of that year. Status dropout rates count the following individuals as dropouts: those who never attended school and immigrants who did not complete the equivalent of a high school education in their home country.

Status dropout rate (American Community Survey) Similar to the status dropout rate (Current Population Survey), except that institutionalized persons, incarcerated persons, and active duty military personnel living in barracks in the United States may be included in this calculation.

STEM fields Science, Technology, Engineering, and Mathematics (STEM) fields of study that are considered to be of particular relevance to advanced societies. For the purposes of The Condition of Education 2015, STEM fields include agriculture and natural resources, architecture, biology and biomedical sciences, computer and information sciences, engineering and engineering technologies, health studies, mathematics and statistics, and physical and social sciences. STEM occupations include computer scientists and mathematicians; engineers and architects; life, physical, and social scientists; medical professionals; and managers of STEM activities.

Student An individual for whom instruction is provided in an educational program under the jurisdiction of a school, school system, or other education institution. No distinction is made between the terms "student" and "pupil," though "student" may refer to one receiving instruction at any level while "pupil" refers only to one attending school at the elementary or secondary level. A student may receive instruction in a school facility or in another location, such as at home or in a hospital. Instruction may be provided by direct studentteacher interaction or by some other approved medium such as television, radio, telephone, and correspondence.

Student membership Student membership is an annual headcount of students enrolled in school on October 1 or the school day closest to that date. The Common Core of Data (CCD) allows a student to be reported for only a single school or agency. For example, a vocational school (identified as a "shared time" school) may provide classes for students from a number of districts and show no membership.

Student support services Includes salary, benefits, supplies, and contractual fees for staff providing attendance and social work, guidance, health, psychological services, speech pathology, audiology, and other support to students.

Study abroad population U.S. citizens and permanent residents, enrolled for a degree at an accredited higher education institution in the United States, who received academic credit for study abroad from their home institutions upon their return. Students studying abroad without receiving academic credit are not included, nor are U.S. students enrolled for a degree overseas.

Supervisory staff Principals, assistant principals, and supervisors of instruction; does not include superintendents or assistant superintendents.

Supplemental Poverty Measure (SPM) An alternative measure of poverty that supplements the U.S. Census Bureau's official poverty measure by adding to family income the value of benefits-including nutritional assistance, housing subsidies, and home energy assistance-from many government programs designed to assist those with low incomes, subtracting taxes and necessary expenses such as child care costs (for working families) and out-of-pocket medical expenses, and adjusting poverty thresholds for geographic differences in housing costs. See also Poverty (official measure).

Suspension Temporarily removing a student from his or her regular classroom (an in-school suspension) or from his or her regular school (an out-of-school suspension) generally for disciplinary purposes.

Tax base The collective value of objects, assets, and income components against which a tax is levied.

Tax expenditures Losses of tax revenue attributable to provisions of the federal income tax laws that allow a special exclusion, exemption, or deduction from gross income or provide a special credit, preferential rate of tax, or a deferral of tax liability affecting individual or corporate income tax liabilities.

Teacher see Instructional staff.

Technical education A program of vocational instruction that ordinarily includes the study of the sciences and mathematics underlying a technology, as well as the methods, skills, and materials commonly used and the services performed in the technology. Technical education prepares individuals for positions-such as draftsman or lab techni-cian-in the occupational area between the skilled craftsman and the professional person.

Three-year moving average An arithmetic average of the year indicated, the year immediately preceding, and the year immediately following. Use of a 3-year moving average increases the sample size, thereby reducing the size of sampling errors and producing more stable estimates.

Time series A set of ordered observations on a quantitative characteristic of an individual or collective phenomenon taken at different points in time. Usually the observations are successive and equally spaced in time.

Time series analysis The branch of quantitative forecasting in which data for one variable are examined for patterns of trend, seasonality, and cycle.

Title I school A school designated under appropriate state and federal regulations as a high-poverty school that is eligi-
ble for participation in programs authorized by Title I of the Reauthorization of the Elementary and Secondary Education Act, P.L. 107-110.

Title IV Refers to a section of the Higher Education Act of 1965 that covers the administration of the federal student financial aid program.

Title IV eligible institution A postsecondary institution that meets the criteria for participating in federal student financial aid programs. An eligible institution must be any of the following: (1) an institution of higher education (with public or private, nonprofit control), (2) a proprietary institution (with private for-profit control), and (3) a postsecondary vocational institution (with public or private, nonprofit control). In addition, it must have acceptable legal authorization, acceptable accreditation and admission standards, eligible academic program(s), administrative capability, and financial responsibility.

Total expenditure per pupil in average daily attendance Includes all expenditures allocable to per pupil costs divided by average daily attendance. These allocable expenditures include current expenditures for regular school programs, interest on school debt, and capital outlay. Beginning in 1980-81, expenditures for state administration are excluded and expenditures for other programs (summer schools and designated subsidies for community colleges and private schools) are included.

Town school See Locale codes.

Traditional public school Publicly funded schools other than public charter schools. See also Public school or institution and Charter school.

Transcript An official list of all courses taken by a student at a school or college showing the final grade received for each course, with definitions of the various grades given at the institution.

Traumatic brain injury See Disabilities, children with.
Trust funds Amounts collected and used by the federal government for carrying out specific purposes and programs according to terms of a trust agreement or statute, such as the Social Security and unemployment trust funds. Trust fund receipts that are not anticipated to be used in the immediate future are generally invested in interest-bearing government securities and earn interest for the trust fund.

Tuition and fees A payment or charge for instruction or compensation for services, privileges, or the use of equipment, books, or other goods. Tuition may be charged per term, per course, or per credit.

Type of school A classification of public elementary and secondary schools that includes the following categories: regular schools, special education schools, vocational schools, and alternative schools. See also Regular school, Special education school, Vocational school, and Alternative school.

Unadjusted dollars See Current dollars.
Unclassified students Students who are not candidates for a degree or other formal award, although they are taking higher education courses for credit in regular classes with other students.

Undergraduate students Students registered at an institution of postsecondary education who are working in a baccalaureate degree program or other formal program below the baccalaureate, such as an associate's degree, vocational, or technical program.

Unemployed Civilians who had no employment but were available for work and: (1) had engaged in any specific job-seeking activity within the past 4 weeks; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

Ungraded student (elementary/secondary) A student who has been assigned to a school or program that does not have standard grade designations.

Urban fringe school See Locale codes.
U.S. Service Academies These higher education institutions are controlled by the U.S. Department of Defense and the U.S. Department of Transportation. The 5 institutions counted in the NCES surveys of degree-granting institutions include: the U.S. Air Force Academy, U.S. Coast Guard Academy, U.S. Merchant Marine Academy, U.S. Military Academy, and the U.S. Naval Academy.

Variable A quantity that may assume any one of a set of values.
Visual and performing arts A group of instructional programs that generally describes the historic development, aesthetic qualities, and creative processes of the visual and performing arts.

Visual impairment See Disabilities, children with.

Vocational education Organized educational programs, services, and activities that are directly related to the preparation of individuals for paid or unpaid employment, or for additional preparation for a career, requiring other than a baccalaureate or advanced degree.

Vocational school A public school that focuses primarily on providing formal preparation for semiskilled, skilled, technical, or professional occupations for high school-age students who have opted to develop or expand their employment opportunities, often in lieu of preparing for college entry.

Years out In forecasting by year, the number of years since the last year of actual data for that statistic used in producing the forecast.

## APPENDIX C <br> Index of Table Numbers

Absenteeism patterns of students
by fourth-, eighth- and twelfth-graders, 227.50
high school persistence status of 2009 ninth-graders, $219.62 b$
(web-only)
Academic clubs
high school seniors' participation in, 227.30 (web-only)
ninth-graders' participation in, 227.10
Academic rank of faculty in postsecondary institutions, 315.20; 315.60 (web-only)
by field of study, $315.70,315.80$ (web-only)
salaries by, $316.10,316.20,316.50 ; 316.60$ (web-only)
tenure by, 316.80; 316.81 (web-only)
by type and control of institution, 315.50 (web-only)
Academic support, expenditures at postsecondary institutions, 334.30, 334.40

ACGR (Adjusted cohort graduation rate) for high school students by state, 219.46
Achievement of elementary and secondary students. See also under individual subjects
mathematics, 222.12, 222.20; 222.70 (web-only)
mathematics scale scores average, 222.10
reading, 221.12, 602.50
reading scale scores average, 221.10
science, 223.10
Activity-based learning approaches in technology and engineering literacy (TEL) for eighth-graders, $224.74 b$ (web-only)
ACT scores, 226.50, 226.60, 305.40
Adjusted cohort graduation rate (ACGR) for high school students by state, 219.46
Administration/Administrative staff
postsecondary institutions, expenditures for, 334.10
public elementary and secondary schools, 213.10, 213.20, 213.30 expenditures for, 236.10, 236.20, 236.25, 236.30; 236.40 (web-only)
Admission requirements for postsecondary institutions, 305.30
Admissions to undergraduate institutions, 305.40. See also Enrollment, postsecondary institutions
Adult education, 507.20, 507.30, 507.40
Advanced Placement courses in public secondary schools, 225.60 (web-only)
Affiliation of postsecondary institutions, 303.90
Age
adult education participation by, 507.30, 507.40
attendance status at postsecondary institutions by, 303.40
bachelor's degrees by, 104.50
child care arrangements by, 202.30, 202.35, 202.40; 202.50, 202.60 (web-only)
child care arrangements of first-time kindergartners by, 202.65
children's living arrangements by, 102.20
cognitive and motor skills of 8- to 22-month-old children by, 220.10 (web-only)
computers available at home, 702.10
distance education taken by graduate students, 311.32
distance education taken by undergraduate students, 311.22
dropouts from high school by, 219.80; 219.81 (web-only)
educational attainment of adults by, 104.10, 104.20, 104.30, 104.40
employment of high school students by, 503.10
employment to population ratio by, 501.50, 501.60, 501.70
enrollment of population by, 103.10, 103.20
of faculty in postsecondary institutions, $315.50,315.60$ (web-only)
field of study in postsecondary institutions by, 311.60
GED (General Educational Development) credentials issued by, 219.60
high school persistence status of 2009 ninth-graders, $219.62 a$ (web-only)
Individuals with Disabilities Education Act, children served under by, 204.40
international comparisons
of educational attainment by, 603.10-603.30
of preprimary and elementary level enrollment, 601.35
of school-age population, 601.30 (web-only)
of secondary and postsecondary enrollment, 601.40
internet access at home, 702.15 (web-only)
internet access not in home by reason, 702.40 (web-only)
internet usage by location, $702.20,702.30$
internet usage by type of internet service, 702.35 (web-only)
juvenile offenders in residential placement facilities, 233.90
at kindergarten entry and peer victimization in third grade, 220.55, 220.56
kindergarten entry status of children, 220.50 (web-only)
kindergartners' entering school, 220.39
labor force participation by, 501.10, 501.40
labor force participation by disability status and, 501.35 (web-only)
language, mathematics and motor skills by, 220.30
literacy and numeracy skills of adults by, 507.15
literacy skills of adults by, 507.10 (web-only)
mathematics achievement by, 222.85; 222.90 (web-only); 222.95
mathematics scores of children at kindergarten entry by, 220.41
night, weekend or online classes taken by graduate students, 311.30
night, weekend or online classes taken by undergraduate students, 311.20

    ${ }^{1}$ Includes persons of Hispanic ethnicity for years prior to 1980.
    ${ }^{2}$ Data for years prior to 1993 are for persons with 4 or more years of high school. Data for later years are for high school completers-i.e., those persons who graduated from high school with a diploma as well as those who completed high school through equivalency programs, such as a GED program.
    ${ }^{3}$ Estimates based on Census Bureau reverse projection of 1940 census data on education by age.

[^12]:    See notes at end of table.

[^13]:    -Not available
    ${ }^{1}$ Beginning in fall 1985, data include estimates for an expanded universe of private schools
    Therefore, direct comparisons with earlier years should be avoided.
    ${ }^{2}$ Data for 1869-70 through 1949-50 include resident degree-credit students enrolled at any time during the academic year. Beginning in 1959, data include all resident and extension students enrolled at the beginning of the fall term
    ${ }^{3}$ Estimated.
    ${ }^{4}$ Projected data. Fall 2015 data for degree-granting institutions are actual.
    NOTE: Data for 1869-70 through 1949-50 reflect enrollment for the entire school year. Elementary and secondary enrollment includes students in local public school systems and in most private schools (religiously affiliated and nonsectarian), but generally excludes home schooled children and students in subcollegiate departments of colleges and in federa schools. Excludes preprimary pupils in private schools that do not offer kindergarten or above. Postsecondary data through 1995 are for institutions of higher education, while later data are for degree-granting institutions. Degree-granting institutions grant associate's or higher degrees and participate in Title IV federal financial aid programs. The degree-granting classification is very similar to the earlier higher education classification, but it includes

[^14]:    ${ }^{1}$ The pupil/teacher ratio is based on all teachers-including teachers for students with disabilities and other special teachers-and all students enrolled in the fall of the school year. Unlike the pupil/teacher ratio, the average class size excludes students and teachers in classes that are exclusively for special education students. Class size averages are based on surveys of teachers reporting on the counts of students in their classes.
    2 "All other public school staff" includes administrative staff, principals, librarians, guidance counselors, secretaries, custodial staff, food service workers, school bus drivers, and other professional and nonprofessional staff.

[^15]:    ${ }^{3}$ The number of homeschooled children in 1999 is from Homeschooling in the United States: 1999 (NCES 2001-033), available at http://nces.ed.gov/ pubsearch/pubsinfo.asp?pubid=2001033. While National Household Education Surveys Program (NHES) administrations prior to 2012 were administered via telephone with an interviewer, NHES:2012 used selfadministered paper-and-pencil questionnaires that were mailed to respondents. Measurable differences in estimates between 1999 and 2012 could reflect actual changes in the population, or the changes could be due to the mode change from telephone to mail.

[^16]:    ${ }^{4}$ Information on changes in GED test series and reporting is based on the 2003 edition of Who Passed the GED Tests?, by the GED Testing Service of the American Council on Education, as well as communication with staff of the GED Testing Service.

[^17]:    ${ }^{5}$ For data on individual years from 1980-81 through 1988-89, see Digest of Education Statistics 2011 (NCES 2012-001), table 180.

[^18]:    NOTE: Data prior to 1994 may not be comparable to later years

[^19]:    See notes at end of table.

[^20]:    -Not available.
    ${ }^{1}$ Includes students reported as being enrolled in grade 13.
    ${ }^{2}$ Data for 1890 through 1950 are from the decennial censuses of population. Later data are Census Bureau estimates as of July 1 preceding the opening of the school year.
    ${ }^{3}$ Gross enrollment ratio based on school enrollment of all ages in grades 9 to 12 divided by the 14- to 17-year-old population. Differs from enrollment rates in other tables, which are based on the enrollment of persons in the given age group only.
    ${ }^{4}$ Data are for 1927-28.
    ${ }^{5}$ Data are for 1940-41.
    ${ }^{6}$ Estimated.
    ${ }^{7}$ Projected.
    NOTE: Includes enrollment in public schools that are a part of state and local school systems and also in most private schools, both religiously affiliated and nonsectarian. The enrollment for ungraded public school students was estimated based on the secondary proportion of ungraded students in prior years. The enrollment of ungraded private school students was estimated based

[^34]:    -Not available.
    ${ }^{1}$ Includes school district administrative support staff, school and library support staff, student support staff, and other support services staff.
    ${ }^{2}$ Because of classification revisions, categories other than teachers, principals, librarians, and guidance counselors are only roughly comparable to figures for years after 1980.

[^35]:    -Not available.
    ${ }^{1}$ Regular districts exclude regional education service agencies and supervisory union administrative centers, state-operated agencies, federally operated agencies, and other types of local education agencies, such as independent charter schools.
    ${ }^{2}$ Schools with both elementary and secondary grades are included under elementary schools and also under secondary schools.
    ${ }^{3}$ Data for most years prior to 1976-77 are partly estimated. Prior to 1995-96, excludes schools with highest grade of kindergarten.
    ${ }^{4}$ Includes schools not classified by grade span, which are not shown separately.
    ${ }^{5}$ Includes elementary, secondary, and combined elementary/secondary schools.
    ${ }^{6}$ These data cannot be compared directly with the data for years after 1980-81.
    ${ }^{7}$ Because of expanded survey coverage, data are not directly comparable with figures after 1983-84.

[^36]:    -Not available.
    IIncludes schools that provide nontraditional education, address needs of students that typically cannot be met in regular schools, serve as adjuncts to regular schools, or fall outside the categories of regular, special education, or vocational education.
    ncludes schools beginning with grade 6 or below and with no grade higher than 8 .
    Includes schools with no grade lower than 7.

[^37]:    -Not available.
    ${ }^{1}$ Includes schools beginning with grade 6 or below and with no grade higher than 8.
    ${ }^{2}$ Includes schools with no grade lower than 7.
    ${ }^{3}$ Includes schools beginning with grade 6 or below and ending with grade 9 or above.

[^38]:    See notes at end of table.

[^39]:    -Not available.
    ${ }^{1}$ Includes graduates of public and private schools.
    ${ }^{2}$ Data for 1929-30 and preceding years are from Statistics of Public High Schools and exclude graduates from high schools that failed to report to the Office of Education. Includes estimates for jurisdictions not reporting counts of graduates by sex.
    ${ }^{3}$ The averaged freshman graduation rate provides an estimate of the percentage of students who receive a regular diploma within 4 years of entering ninth grade. The rate uses aggregate student enrollment data to estimate the size of an incoming freshman class and aggregate counts of the number of diplomas awarded 4 years later. Averaged freshman graduation rates in this table are based on reported totals of enrollment by grade and high school graduates, rather than on details reported by race/ethnicity.
    ${ }^{4}$ Derived from Current Population Reports, Series P-25. For years 1869-70 through 1989-90, 17-yearold population is an estimate of the October 17-year-old population based on July data. Data for 1990-91 and later years are October resident population estimates prepared by the Census Bureau. ${ }^{5}$ Estimated.
    ${ }^{5}$ Includes imputations for nonreporting states.
    ${ }^{7}$ Projected by private schools responding to the Private School Universe Survey.
    ${ }^{8}$ Includes estimates for public schools in New York and Wisconsin. Without estimates for these two states, the averaged freshman graduation rate for the remaining 48 states and the District of Columbia is 75.0 percent.
